Ecuador

Food and Agricultural Import Regulations and Standards - Narrative

FAIRS Country Report 2014

Approved By:
Mariano J. Beillard

Prepared By:
Andres Barahona and Mariano J. Beillard

Report Highlights:
This report outlines Ecuador’s requirements for food and agricultural product imports. Hyperlinks to ministries, agencies, and legal documents have been provided throughout this updated report.
SECTION I. GENERAL FOOD LAWS

Ecuador’s World Trade Organization (WTO) accession occurred on January 21, 1996. The country’s Foreign Trade Law prohibits any economic, administrative, or technical practice that limits or discourages foreign and/or domestic trade, free competition, or the local production of goods and services. This legislation only sanctions WTO specified corrective measures.

Ecuador maintains a number of tariff and non-tariff barriers that interfere with food and agricultural product imports. While its import tariffs are not excessive, technical barriers and sanitary/phyto-sanitary (SPS) restrictions are often problematic. Importers have raised concerns that these measures are not established with the intent of protecting human, animal or plant health, but rather to restrict trade and the outflow of foreign exchange (i.e., dollars). Trade sources comment that Ecuador suffers from weak, inefficient government institutions which are prone to reinterpret the application of rules and their requirements without warning. As a consequence, most administrative procedures remain cumbersome, often requiring excessive documentation.

Food safety responsibilities are shared by the Ministries of Agriculture, Livestock, Aquaculture and Fisheries (MAGAP) and Public Health (MoPH). Several agencies within these ministries handle the technical and administrative processes of prior authorization, inspection, and control of local and imported food and agricultural products.

The Ministries of Public Health and Environment (MoE) are increasingly active in proposing new regulations for the safe use and consumption of genetically engineered (GE) products. Many of these regulations are non-science based.

Current rulemaking aims to build upon the Food Security Law (April 2006), which prohibits the development, use, and trade (including imports) of GE-derived products for human consumption. Despite the law being deemed unenforceable by the country’s Attorney General, Congress in December 2006 passed a new health law expanding upon the earlier legislation’s provisions: incorporating a prohibition against the acceptance of GE-content food donations in the absence of harmlessness analysis certificate. Ecuador has failed to enforce this legislation given its lack of an adequate control and certification system.

More troubling is the food sovereignty provision enshrined in the 2008 constitution. The Organic Law on Food Sovereignty (May 2009) expands upon the constitutional provision by banning genetically engineered crops and their seeds from Ecuador. Imports are only permissible with prior presidential authorization and approval of the National Assembly.

A. The Official Register

The Official Register (Registro Oficial - ROE) is Ecuador’s equivalent of the U.S. Federal Register. As such, the country’s laws, rules of application, executive decrees, and ministerial agreements, as well as national standards, enter into effect on the day following their publication. The exception is when a specific date has otherwise been established. Ecuador’s constitutional court publishes the Official Register, informing the general public and stakeholders of new laws and other legal dispositions.

B. Ministry of Agriculture, Livestock, Aquaculture and Fisheries
The Ministry of Agriculture is responsible for ensuring sustainable agriculture and aquaculture development. It directs and evaluates all agricultural and livestock activities. **Laws and regulations** governing the MAGAP’s activities include:

1. **Agricultural Development Law** (ROE 55, April 30, 1997): The law guarantees entry to agricultural inputs, improved seeds, plants and animals, machinery, equipment and technologies, except for those deemed harmful to the environment by the country of export.

2. **Animal Health Law** (ROE 409, March 31, 1981): This law has been enacted to prevent, control and eradicate illnesses in the national livestock population. The Ministry of Public Health and MAGAP are assigned responsibility for controlling the quality of animal origin products in the human food chain. These ministries are responsible for issuing food recalls, as well as for prohibiting trade in products deemed harmful to consumers. The law requires MAGAP authorization and sanitary certification prior to the export or import of animals and their by-products.

3. **Plant Health Law** (ROE 475, January 18, 1974): This law seeks to prevent and control the outbreak of plagues, illnesses and pests that could adversely affect local agricultural crop production. It establishes regulations, conditions and prohibitions for the export, import, and local trade, and the production of certain plant products.

4. **Seeds Law** (ROE 594, May 26, 1978): This law regulates seed export-import requirements, as well as the trade in seeds and their by-products. Seed exporters-importers are required to register with the Ministry of Agriculture.

5. Law for the Formulation, Manufacture, Import, Trade and Use of Pesticides and Similar Products for Agricultural Use: The law requires that importers, manufacturers, and distributors of pesticides and similar products used in agriculture to register with the Ministry of Agriculture. The law regulates the transport, storage, labeling, and advertisement of these products, as well as sets maximum residue levels for pesticides. This law is governed by the Andean Community of Nations (CAN) Decision 436 (amended by CAN decision 684, May 21, 2008).

6. Food Sovereignty Law (ROE supplement 583, May 5, 2009): The **Organic Law on Food Sovereignty** (LORSA) declares Ecuador to be free of GE crops and seeds.

**Agencies of the Ministry of Agriculture, Livestock, Aquaculture and Fisheries**

1. **AGROCALIDAD** (Agricultural Quality Guarantee Agency): It seeks to prevent the introduction and spread of (non-native) pests and diseases and is responsible for eradicating animal and plant pest and diseases. It enforces domestic legal norms, as well as regional and international standards regulating the export-import, manufacture, formulation, distribution, domestic trade, and end-use of agricultural products, pesticides, and veterinarian products. AGROCALIDAD issues sanitary/phyto-sanitary certificates, harmlessness analysis, good agricultural practices, product quality, and production chain certificates.

2. **Domestic and International Trade Office**: The office reports to the Under Secretary for Agricultural Commerce; collects and analyzes agricultural trade intelligence and production data
and suggests policy and legislative changes. It processes import authorization requests and remits these to AGROCALIDAD for sanitary certification and the Under Secretary for final approval.

Note: Prior import authorization and license requirements for food and agricultural products are contained in the Foreign Trade and Investment Council’s (COMEXI) Resolutions 585 and 590. These identify a positive list of agricultural products subject to prior MAGAP import authorization or licensing. These ruling apply to non-Andean Community of Nations products. FAS Quito believes this to constitute a violation of WTO non-discrimination principles.

C. Ministry of Public Health

The Ministry of Public Health’s National Control and Surveillance System (NCSS) regulates the entry and consumption of (imported) processed food products, beverages, food additives, and pesticides. Laws and regulations governing its activities include:

1. Health Law (ROE Supplement 423, December 22, 2006): This law requires importers to obtain a sanitary registration permit prior to the import, trade, production, storage or transportation of processed food, beverages, food additives, and pesticides for domestic, agricultural or industrial use. The law charges the Ministry of Public Health and its agencies with responsibility for the inspection and control of all processed foods, beverages, and food additives. The law prohibits the import, trade, utilization, or development of foodstuffs derived from genetically modified organisms without prior authorization. Technical and scientific analysis documentation (acceptable to Ecuador’s national sanitary authority) must be submitted. This law also specifies labeling instructions for GE-content food products. Food donations containing GE-content are subject to the same review and authorization process, as well as subject to an interagency review/control system. The GE-related provisions of this law have yet to be enforced.

2. Sanitary Control and Registration Regulation (May 2014): This regulation regulates the sanitary registration process for imports and domestically produced food and beverage products. It stipulates that sanitary registration is required prior to the import and distribution of food products. This regulation however provides differing requirements for domestically produced and imported products.

3. Food Regulation: The regulation requires that all imported food products be authorized for free sale. It specifies container, packaging, labeling requirements, as well as manufacturing processes. The regulation also regulates the transportation, distribution, and the trade of food.

4. Consumer Defense Law: The law guarantees consumers’ rights to quality goods and services at fair prices. The law applies to all private and public entities that export-import, manufacture, and or distributes goods and services. It requires that consumers be provided with sufficiently clear and complete enough information to make an informed (purchase) decision about a product or service. The consumer defense law establishes the product content information to be included on a label (including price, in the local currency), as well as weights expressed in Standard International Units of Measurement (SI). This law also requires the labeling of GE-content food. The law’s provisions, especially the GE-related ones, have yet to be enforced.
5. Regulation for the Authorization and Control of Food Publicity and Promotions (February 18, 2011): It regulates the promotion of food products. This regulation affects promotional events for established, new-to-market, and imported food products.

D. Other Institutions Involved in Foreign Trade

The Ministry of Foreign Affairs (MoFA): This entity is the lead foreign affairs agency; it works with the Office of the President in coordinating with the Ministries of Agriculture and Foreign Commerce (MoFC) on policies and the enforcement of agreements. The ministry participates in commercial negotiations.

Ministry of Production, Employment and Competitiveness (MoPCT): It is an inter-ministerial policy coordinating agency that aligns ministerial goals with overall government policies.

Ministry of Industries and Productivity (MIPRO): This entity is the lead trade agreement negotiation agency. The ministry is responsible for trade, investment and industrialization policies. It seeks to improve Ecuador’s business environment and increase domestic and international competitiveness.

Ecuadorian Normalization Institute (INEN): Ecuador’s Technical Standards (NTE) setting body. NTE standards define the characteristics of raw materials, intermediate products, and finished products marketed in Ecuador. INEN establishes inspection, analysis, measurement, and classification methodologies. It administers the local quality certification system, as well as implements and enforces the use of the International Measurement System. INEN enforces compliance with NTE standards, as well as serves as the Codex point-of-contact.

Foreign Trade Council (COMEX): Created as part of the Production, Commerce, and Investment Code (ROE 351, December 29, 2010), COMEX replaces the Foreign Trade and Investment Council (COMEXI). It approves commercial policies and coordinates foreign trade.

Ecuadorian Customs Corporation (CAE): Governed by the Organic Law for Customs, CAE is responsible for borders and ports. It enforces the collection of import duties and taxes.

Laws and regulations governing international trade include:

1. Foreign Trade Law (ROE 82, June 9, 1997): The law prohibits any practice or administrative measure limiting free competition or that obstructs domestic or international trade. The law allows for corrective actions to be applied in cases contemplated under WTO regulations.
SECTION II. LABELING REQUIREMENTS

A. General Requirements

Food containers must have a printed or affixed labels. Imports will be allowed to clear Customs once a Spanish language sticker label is affixed that meets the requirements needed for the product to be marketed in Ecuador. An expiration date (i.e., “good through”), lot number, the sanitary registration code, the list of ingredients, and name of the importer reading “Importado por…” are required.

A label containing words, pictures or other representations highlighting a product’s medicinal, therapeutic, preventive, curative, nutritional, or special features which may misrepresent the real nature, origin, composition or quality of the product is not permissible.

When small product size limits the possibility of listing all required food label information, the required information must alternatively be printed on the larger packaging container that contains several units of the product. This is the case for candy, chocolate, and most confectionery products. Ecuador’s solid waste management regulations require that every product label must promote recycling or re-use of the packaging material or container.

Ecuadorian standards do not differ significantly from those established by the United States. Standards are based on Codex and U.S. Food and Drug Administration (FDA) stipulations. Ecuador’s accepts FDA standards in the absence of a local standard.

B. Nutritional Labeling Specific Requirements

The Ministry of Public Health’s Food Labeling regulation (November 29, 2013/ Executive Agreement 4522 and published in the Official Registry as R.S. SP134) stipulates that all processed food products sold in Ecuador must contain a traffic light signal on the label highlighting sugar, salt, and fat content (see the below picture for an example).

Ecuador’s NTE INEN 1334-2:2011 in addition specifies the minimum package nutritional labeling requirements for processed food products. Ecuador is basing this standard on Codex and FDA guidelines. Ecuador refers to the United Nations’ Food and Agriculture Organization (FAO) and World Health Organization (WHO) for Recommended Daily Intake (RDI) values.
Mandatory Nutritional Labeling, Exceptions and Special Dispositions

**Foods Containing Insignificant Quantities of Nutrients:** An insignificant quantity is defined as permitting the declaration “zero.” The exception applies to total carbohydrates, dietary fiber and protein for which an insignificant quantity is defined as being less than one gram. Products exempted include grain coffee, tea leaves, soluble tea, and unsweetened coffee, as well as dehydrated vegetables for seasoning, flavor extracts and food colorings.

**Dietary Supplements:** The exception does not apply to dietary supplements packaged as conventional foods (e.g., breakfast cereals), subject to NTE INEN 1334-2 requirements.

**Packaged Food:** These products are exempt only if they are shipped in bulk and are not meant for direct sale to the consumer, but are imported for use by the food processors (e.g., bulk-packaged sweet corn to be re-packaged and sold as a vegetable mix).

**Fresh Food Products:** Fresh fruits and vegetables and seafood (fresh/frozen) are exempt.

**Genetically Engineered Ingredients:** Ecuador’s Food Labeling Regulation and NTE INEN 022 stipulate that all processed food products with a GE-content of 0.9 percent or greater are required to state on the front panel label that the product contains GE-content in Spanish “CONTIENE TRANSGENICOS.” The word “TRANSGENICO” must be included after the ingredient on the ingredients list.

**SECTION III. PACKAGING AND CONTAINER REGULATIONS**

Ecuador’s Food Labeling regulation stipulate:
Food containers must have an adequate shape, capacity and seals. No further explanation of what is deemed “adequate” is available.

Containers should be made of the proper materials, adequate for the physical-chemical nature of the food to be contained.

Containers must guarantee proper product protection, conservation, and identification during product shelf life.

Meet NTE established standards for each product or group of products.

Label must promote recycling or re-use of the packaging material or container.

SECTION IV. FOOD ADDITIVES REGULATIONS

Ecuador’s Health Law, the Food Regulation, and NTE INEN 2074-96 establish regulations and standards for food additives and their use. The Food Regulation stipulates that the import of food additives and their in-country utilization is permissible when: 1) use is innocuous to human health and 2) count with the proper sanitary registration.

Technical standard NTE INEN 2074-96 is based on Codex standards and the FDA regulations. This standard establishes a positive list of allowed additives, regulations for tolerance levels, and a list of prohibited substances for human consumption. This positive list is periodically checked and revised modified according to new scientific, technological, and toxicological studies.

NTE INEN 2074-96 and other technical standards and norms are available for sale. U.S. exporters may obtain copies by contacting the Ecuadorian Institute of Normalization (see, Appendix I).

SECTION V. PESTICIDES AND OTHER CONTAMINANTS

The Formulation, Manufacture, Import, Trade and Use of Pesticides Law require manufacturers, importers and distributors to declare pesticides’ chemical composition. AGROCALIDAD’s Plant Health Unit is the lead agency for applying this law and enforcing its requirements.

Ecuador has not set its own maximum tolerance levels. In lieu of these, Ecuador applies Codex maximum residue limits (MRL). Other maximum tolerance levels established by internationally recognized institutions (e.g., the U.S. Environmental Protection Agency) are also accepted.

The Ministry of Agriculture will detain agricultural products suspected of being contaminated with excessive pesticides or similar products. If testing confirms an excessive MRL level, product will be destroyed without compensation being provided.

SECTION VI. OTHER REGULATIONS AND REQUIREMENTS

A. Sanitary Registration
To protect consumer health, Ecuador’s Health Law establishes that all national or foreign processed food products and additives must obtain sanitary registration prior to their import and sale in Ecuador. The Sanitary Registration Law Revision (May 2014) stipulates that the sanitary registration petition can be filed by the (foreign) manufacturer or by its Ecuadorian legal representative. In either case, the registration belongs to and will be issued on behalf of the manufacturer, unless specifically requested otherwise.

The sanitary registration is valid for a period of five years. The registration fee is approximately $620 per item (applies to items originating outside of Ecuador). Before the registration takes place the product has to pass a certified laboratory analysis (costing roughly $400). Depending on the type of product, three separate laboratories may be required to provide a stability analysis. Sixty days are normally required to complete the registration process.

The sanitary registration for imported products is granted by confirmation (or equivalence) 72 hours after filing a “correct” application with the National Sanitary Control and Regulation Agency (ARCSA) and payment receipt. There is a procedure in place to review documentation prior to submitting an application; filers will be advised of any observations within three days.

Applications must be electronically filed with the ECUPASS system and include: 1) the name and address of the person or entity under whose name the sanitary registration is requested; 2) name, phone, and full address of the manufacturer; 3) product name in full, including brand name 4) product description; 5) an ingredient list or composition formula (in percentages) used in the product (including additives) declared by the manufacturer in descending order; 6) production code interpretation; 7) shelf life; 8) packaging information declaring the type of container and content expressed in International Measurement System (SI) units and conservation conditions, and; 9) the signatures of legal representative of the company and technical expert.

Additional documentation includes:

- A (sworn) statement signed by a technical expert attesting that the product meets relevant national technical standards. In the absence of national technical norm, the importer must declare that the product meets international standards or manufacturer specifications.
- The manufacturer’s certification or the product owner’s authorization granting the importer permission to register the product.
- A certificate of free sale, sanitary/phyto-sanitary certificate, or an export certificate issued by the competent authority in the country of export.
- Certificates of good manufacturing practices, HAACP, and or of quality or safety.
- A signed technical report describing the product’s processing procedures.
- Physical and chemical specification of the packaging/container material.
- A product label affixed with a Spanish-language sticker that meets INEN technical standards. Nutrition table statements must be supported by a signed technical report issued by the manufacturer’s quality control lab or by an Ecuadorian Accreditation Agency accredited lab.
- Along with a stability study/card, a signed technical declaration of the product’s shelf life or its maximum consumption time, as well as preservation and storage conditions is required.
• A phyto-sanitary certificate is required for: 1) walnuts without shell; 2) almonds; 3) hazelnuts; 4) raisins; 5) prunes; and; 6) pine nuts for human consumption that have not undergone a transformation process.  
• Organic products must count with corresponding organic certification.

Prior to requesting a sanitary registration, an importer/distributor will need to obtain from the Ministry of Health a sanitary certificate for the storage facility where imports will be warehoused. A new sanitary registration permit is needed when a product’s composition, conservation process, nature of its container or manufacturer changes. A new permit is also required whenever there is a substantial modification of: 1) colorings; 2) flavorings; 3) sweeteners; 4) conservation agents, and; 5) nutritional additives. Non-Spanish language documents must be translated. Foreign documentation must be authenticated/ legalized by the Ecuadorian consulate of jurisdiction or have an apostille certificate affixed.

According to FAS Quito sources the sanitary registration regulation provides a registration exemption for food products and ingredients that are utilized by local food manufacturers in final products that count with their own sanitary registration. To be eligible to import product under this provision, the product must count with prior authorization from the Office of the Director of General Health. Obtaining approval is highly cumbersome, requiring proof that the product or ingredient will not be commercialized prior to undergoing substantive transformation.

**B. Sanitary/ Phyto-Sanitary Certification**

Importers of animal and plant products must request prior to shipment an import permit from AGROCALIDAD. Prior administrative authorization must also be requested for import of most commodities, which requires the approvals of AGROCALIDAD and one the Ministry of Agriculture’s Under Secretary of Strategic Management.

The exporter must provide the importer with the official country of origin health certificate. For U.S.-origin animals, plants and their derived products, Ecuador only accepts health certificates issued by USDA’s Animal and Plant Health Inspection Service (APHIS) and USDA’s Food Safety and Inspection Service (FSIS).

An import permit (DUI or Unique Document for Imports) is required. Certain imports require Ministries of Agriculture or the Ministry of Public Health import authorization. Request must be filed with the Ministry of Agriculture’s Directorate for Domestic and International Trade and include the following:

• The Unique Import Document (DUI) (see Section IX - Import Procedures).
• Requisition Note (original and three copies).
• Pro-forma Invoice (original and three copies).
• “Prior Import Authorization” forms (original and three copies).
• For imports of animals and other products of animal origin, the importer must include a payment receipt of the import fee at the National Agricultural Development Bank (BNF).

An individual or collective PEDIGREE certificate must be included for the import of pets and breed certified animals. The Pedigree Certificate will be reviewed by the Under Secretariat for Agricultural Development in Quito or by the Under Secretary of the Coastal Region in Guayaquil.
AGROCALIDAD verifies the documentation and issues the corresponding sanitary/phyto-sanitary permit. If the documents are not in correct order, AGROCALIDAD will return the application to the Domestic and International Trade Directorate denying import authorization.

An AGROCALIDAD sanitary/phyto-sanitary permit specifies under what conditions and what type of treatment products are allowed to enter Ecuador. Despite a product being granted a sanitary/phyto-sanitary certificate, ultimately final import approval rests with the Under Secretary of Agriculture for Policy, Trade and Investment.

**Other Requirements, Animal and Plant/ Plant Material Imports**

**Animals**

- Animals must come from zones in which no infect-contagious illnesses were present, during a specific period of time prior to shipment. Ecuador follows World Organization for Animal Health (OIE) standards.
- Animals must be immunized (following AGROCALIDAD mandated vaccinations).
- Laboratory test/exam results indicating a negative presence of infectious/contagious diseases.
- Animals should be treated for parasites, as well as should be in good physical condition without clinic symptoms of infectious/contagious diseases.

**Plant/ Plant Material**

- The product must be free of soil, and of animal or vegetal products in decomposition.
- Use of poor quality, re-used, infected or infested packaging material is prohibited.
- The plant breeding material must come from a country or area known to be free of pathogens or diseases.
- AGROCALIDAD requires that product’s to be accompanied by a Fumigation Certificate or Quarantine Treatment certificate signed by the competent authority of the country-of-origin.

**C. Registration of Agricultural and Livestock Inputs**

Individuals or companies importing and or producing agricultural and livestock inputs (seeds, plants and plant breeding material, improved animals, semen, fertile eggs and embryos) must be registered with AGROCALIDAD. The validity of the registration is indefinite, but it can be canceled due to non-compliance with the dispositions stated in the different laws and accompanying regulations.

**D. Control of Products at Retail/Wholesale Distribution**

The Ministry of Public Health has the obligation of controlling processed food products and additives sold in Ecuador. If a product does not meet the minimum quality standards, or lacks sanitary registration it can confiscated and destroyed. The Ministry of Public Health in coordination with the
Ministry of Agriculture controls products of animal origin destined for human consumption. Trade in items deemed harmful to human health is prohibited.

AGROCALIDAD or other designated entities may inspect commercial and industrial facilities storing and selling seeds to verify the health status of the plant breeding material. If plant pests or infectious diseases are present, staff will declare either an “Observation Zone” or “Quarantine Zone.” If necessary, infected material will be destroyed.

E. Conformity Certificate

The Ministry of Industries implementing COMEX Resolution 016 requires a Conformity Certificate for products listed in the resolution. Each lot of processed food products to be imported must be certified to have been produced following the specific INEN standard. Importers are allowed alternatively to present a manufacturer data sheet (ficha técnica) that details product formula and the manufacturing process followed.

SECTION VII. OTHER SPECIFIC STANDARDS

A. Wine, Beer and Other Alcoholic Beverages

Imports of alcoholic products, including beer, require prior Ministry of Public Health authorization in addition to sanitary registration. For container requirement purposes, imports must comply with INEN regulations PyM 1992-20, PyM 1992-17, and PyM 1992-21. Alcoholic products and beer must incorporate the following text on their front label:

- “Importado por… (Name of the representative or importing company),” alcohol-by-volume, and the capacity of the bottle in cubic centimeters.

Alcoholic products and imported beers sold in Ecuador that do not fulfill these requirements are considered contraband material by the local authorities.

B. Products Samples and Mail Order Shipments:

Export-import regulations establish that samples are exempt from the payment of import duties, value-added tax (IVA) and special consumption tax (ICE), when the cost-insurance-freight (CIF) value does not exceed $400 or its equivalent in other currencies. However, a fix cost of $42 per package will be applied to each shipment. Merchandise exceeding this value will pay (for the excess) the established tariff for imports.

For exemption treatment, samples without commercial value are required to:

- Be shipped by the manufacturer, its representative or the authorized exporter.
The addressee shall be a company or an importer dedicated to this commercial activity.
The documentation (commercial invoices, transportation invoices or others concerning the shipment), shall contain marks and notations clearly indicating that the products are samples without commercial value.
Product samples must carry a statement indicating that these are samples without commercial value, whose sale is forbidden. Customs may mark samples with perforations or break seals in order to impede their sale.

Correspondence and small packages (up to 4 kilograms) are exempt from taxes but will pay the fixed cost mentioned above. Other types of packages and international postal cargo leaving or entering the country, with or without commercial purposes and made by any type of mail agency, are subject to the payment of the corresponding taxes in relation to their CIF value.

Similarly small packages, other packages, and postal cargo and samples without commercial value, exempt or not of taxes, whose CIF values do not exceed $160 will clear Customs with a simplified declaration. Although samples can be permanently imported, the nationalization process is prone to complications. For samples that will be used as an ingredient in the development of a food product, obtaining a sanitary authorization is recommendable.

The import (and export) by mail of products such as narcotics, explosives, tobaccos, liquors, inflammable products and other dangerous or contaminant substances are forbidden.

SECTION VIII. COPYRIGHT AND/OR TRADEMARK LAWS

Ecuador’s Intellectual Property Law (May 19, 1998) regulates and guarantees intellectual property. The law covers inventions, trademarks, commercial logos and models, commercial and industrial secrets, brand names, distinctive appearances of businesses and commercial establishments and any other intellectual creation for agricultural, industrial or commercial use. The law applies to both Ecuadorians and foreign nationals residing in or not in Ecuador.

A. Trademarks

Trademark registration applications are filed with the National Institute of Intellectual Property (IEPI). The initial request to register a trademark made in a WTO member state, the Andean Community of Nations, or through the Paris Agreement for the Protection of Industrial Property grants the applicant the priority right for a period of up to six months in which to file the trademark application in Ecuador.

A trademark registration is valid for 10 years from the date of its concession and it can be renewed. The applicant must pay the IEPI a fee of $116 plus an additional $260 fee for testing, a $28 for annual maintenance fee, and $54 trademark title fee. Legal representation fees may exceed $1000. The renewal of a trademark has to be requested six months prior to its expiration.

B. Brand Names
Brand names are registered with the National Institute of Intellectual Property. Procedures for registration are the same as followed for trademark registration. Registration entails the presumption holder benefit. The right to exclusive use is premised on the brand name’s public and continuous use in trade for a period of no less than six months. Brands are protected without the obligation of registration. Brand name registrations do not have maximum validity times.

SECTION IX. IMPORT PROCEDURES

Importers require that the exporter obtains all necessary export permits and licenses, as well as arrange for logistics to the U.S. shipping port. Imports in Ecuador are handled at the individual level or by a company. An import permit (DUI or Unique Document for Imports) is required. Certain imports require Ministries of Agriculture or the Ministry of Public Health import authorization.

Ecuador’s Customs Authority requires that food and agricultural product imports to be filed with Unique Customs Declaration (DAU) form. Documentation requirements include:

1. Requisition Note (mandatory).
2. Authorizations or licenses (if needed): If the type of good demands it, it is necessary to obtain authorizations in a Ministry or other public entity depending on the case (see Section VI, Other Regulations and Requirements).
3. Insurance Certificate (if needed).
4. Import Verification Request (if needed): Only for goods whose FOB value exceeds $2,000. The request has to be filled and then delivered to the verification company along with the requisition note.
5. Certificate of Inspection (Certificado de Inspección): This certificate is issued by the verification company after having previously issued the SVI, and only in goods exceeding FOB value of $2,000. If a good enters Ecuador without the certificate of inspection, it cannot be released.
7. Shipment Manifest (mandatory).
8. Bill of Lading (mandatory).
9. Commercial Invoice (Factura Comercial) (mandatory).
10. Customs Declaration of Value (DAV) (mandatory): the DAV is a sworn declaration that the consigned value is the real one.
11. In the case of products that require an import permit these also need to be presented with all the specific requirements requested for the product.
12. An ARCSA food sanitary registry for processed food products or a health certificate for animals, plants or their by-products that meets AGROCALIDAD’s import requirements.

Once the customs agent transmits the DAU, Customs assigns an inspection control channel. Control channel inspections range from simple documentation review to the physical inspection of products. Any discrepancies between the DAU and shipment will lead to delays and possible shipment confiscation. Customs does permit the re-export of products. FAS Quito cautions exporters not to send samples or extra promotional items not included on the DAU. Import documents do not need to be translated into Spanish.
Customs Clearance Steps

- The import declaration is submitted to the corresponding Customs district, which verifies the data and confirms compliance with all requirements. If there are no observations, the declaration will be accepted, and the district will assign a validation number. Once the declaration is accepted, it is final and cannot be amended.
- Document revision or visual examination of the goods, establishing product nature, quantity, value, and tariff classification.
- In the visual examination, the verification company checks the merchandise, verifies that the security seal has not been tampered with and compares the declaration with the actual load. If correct, the document review follows. If not consistent, the verification company will verify that the difference is within a margin of tolerance (maximum 10 percent of the taxes) and the importer will pay the same. Taxes are paid on actual quantity; differences exceeding 10 percent are considered illegal shipments.
- The physical examination takes additional time. Seventy percent of the containers at the port of Guayaquil are held more than 15 working days.
- The verification company carries out the document revision. This consists of verifying that what was declared matches what the accompanying documents are on the DUI. If there are no observations, the Customs district will authorize the payment of tariffs, which will be done through an authorized bank. Subsequently, Customs will proceed to confirm this payment and will authorize the delivery of the merchandise.
- Customs may demand a guarantee of 20 percent of the total amount to be paid within a maximum period of 60 days. If only the commercial invoice is missing in the declaration, the merchandise can be removed with a guarantee. The time period allowed for presenting a new invoice is 30 days. However, if the certificate-of-origin is missing it is recommendable to leave the merchandise with Customs until the new certificate arrives.
- Appeals are to be made within 20 days Customs’ action/notification.

Specific Rules for Agricultural Imports

Inspection of agricultural products in the country-of-origin is a legal requirement. Verification companies hired for this purpose will carry out the inspection. Ecuador’s Animal and Plant Health laws stipulate that agricultural and livestock products (except industrialized products) can only arrive at seaports and airports where AGROCALIDAD is present.

Airports: Quito and Guayaquil
Seaports: Guayaquil, Manta, Esmeraldas, and Puerto Bolívar
Land Ports: Tulcan, Macara, and Huaquillas.
APPENDIX I. GOVERNMENT REGULATORY AGENCY CONTACTS

MINISTRY OF FOREIGN RELATIONS
Address: Carrión E1-76 y Avda. 10 de Agosto, Quito, Ecuador
Phone: (593 2) 299-3200 • www.cancilleria.gob.ec/

MINISTRY OF FOREIGN TRADE
Address: Avda. Amazonas N21-147 y Ramón Roca, Quito, Ecuador
