Report Highlights:
This report provides a list of food, beverage and agricultural shows held in India. The Indian trade show industry holds a large number of shows dedicated to the various aspects of the food and agricultural industry. Indian ag, fishery, and forestry imports and exports in 2014 were, respectively $25 billion and $43 billion.
General Information:
Indian food shows traditionally showcased Indian exporters or focused on food processing technologies. However, over the past few years, several shows have attracted exporters and importers as well as domestic manufacturers. Trade shows have become a potentially useful vehicle for those businesses seeking to identify a distributor, introduce a new product, or get a feel for the Indian market. Additionally, India has long held shows focused on agricultural technology and inputs; some of these shows attract hundreds of thousands of farmers.

Indian importers increasingly travel to international trade shows such as Gulfood, Anuga, and SIAL Paris. These shows present good opportunities to meet some self-selecting Indian firms that import and distribute food, beverage, and other agricultural products. However, to meet a broader audience of potential importers and distributors, local or regional shows taking place within India provide an opportunity to identify manifold more potential customers.

One of the best reasons to come to a show in India is to gain a greater understanding of the local market. Consequently, combining a local retail tour along with participation at a trade show or some site visits and meetings with customers is a better way to get the most out of a visit to India. The U.S. Department of Agriculture (USDA) currently endorses the Annapoorna-World of Food India show held each September. Occasionally, USDA India offices as well as USDA Cooperator groups will participate in additional food and agricultural product shows. In addition, the USDA India offices regularly assess shows (e.g., Food Ingredients/Health Ingredients, India Food Forum, Food Hospitality World, and Delhi Wood) to talk with industry members about U.S. food and agricultural products and their potential in India.

The list of shows following the trade tables includes some farm and technology oriented trade shows as well as food and beverage shows. This list is not exhaustive and inclusion or absence in this report should not be considered recognition of the particular show quality. The trade show industry in India is relatively new and the expectations for experienced trade show visitors should be managed accordingly for a developing market. Dates are subject to change and travelers should check with the show organizers before making travel arrangements.

Note: There are several key trade restrictions that limit market access for U.S. food products. Imports of most animal and livestock-derived food products are effectively banned due to established Indian import requirements. This includes certain sub-categories in the Harmonized Tariff Schedule under Chapters 2, 3, 4, 5, 16 and 21 (e.g., milk and dairy products, poultry meat, certain seafood, ovine and caprine products, as well as pork products and pet food). Furthermore, imports of beef are banned due to religious concerns.
