Ukraine

Food and Agricultural Import Regulations and Standards - Narrative

FAIRS Country Report

Approved By:
Ann E. Murphy, Agricultural Attaché

Prepared By:
FAS/Kiev Staff

Report Highlights:
There have been very few changes affecting agricultural product quality, safety, and sanitation regulations in Ukraine since submission of the last report. Compulsory Conformity Certification for some food products was abolished (see Section VI). Ukraine adopted a few biotech laws but has several draft laws waiting for debate and possible amendments. There is a new biotech law on the registration of GM feeds, but implementing regulations are lacking. Information on Food Laws (Section I) was significantly expanded. Contact information for Ukrainian regulatory authorities has been updated.
Section I. Food Laws:

The Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Kyiv, Ukraine prepared this report for U.S. exporters of domestic food and agricultural products. While every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

Ukraine possesses a complicated and costly food safety system inherited from the Soviet Union. Controls are implemented by various state agencies that often have overlapping functions. The following agencies of the Government of Ukraine (GOU) are involved in assuring the safety of domestically produced and imported food products, and animal and plant health issues:

- State Epidemiological Service (SES) of the Ministry of Health Care of Ukraine (MHCU) establishes food safety standards and is responsible for all aspects of food safety;
- State Committee for Veterinary Medicine (SCVM) is responsible for animal health, safety and wholesomeness of meat, seafood, other products of animal origin and live animals;
- Main State Phytosanitary Inspection Service (MSPIS) of the Ministry of Agricultural Policy and Food of Ukraine (MAPFU) is responsible for plant health issues;
- State Committee of Ukraine on Technical Regulations and Consumer Policy (SCUTRCP) is responsible for compliance of food products with existing quality and safety standards;
- State Ecological Inspection Service (SEIS) of the Ministry of Ecology and Natural Resources of Ukraine (MENRU) is responsible for radiological and environmental control.

Due to complexity of the existing food safety system and its unpredictable changes, it is difficult for foreign suppliers to be aware of the most current food safety regulations. Suppliers should work with experienced importers in order to verify most current import requirements prior to shipping to Ukraine. Ukraine must comply with the WTO Agreement on the Application of Sanitary and Phytosanitary Measures, the SPS Agreement, since accession in 2008. Currently, certain sanitary measures used in Ukraine could be considered non-compliant with provisions of the WTO agreement and/or with the standards established by international standards setting bodies, as well as with internationally accepted trade practices.

Customs clearance and co-related inspections in Ukraine are fee-based and are viewed by many regulatory agencies as a source of additional revenues. Exporters should be prepared for two or more GOU agencies to take samples from their shipment and test for the same safety indicators.

Although the country’s regulatory environment is constantly evolving, most food safety standards have not been revised since the breakup of the Soviet Union in 1991. The main document which regulates food safety indicators in Ukraine is the Medical and Biological Requirements and Sanitary Norms of Quality of Raw Food Materials and Food Products that was approved by the Ministry of Health Care of the USSR on August 1, 1989. This document divides all food products into nine major categories: meat, meat products, poultry and eggs; milk and dairy products; fish, fish products and other seafood; bread, pasta and cereals; sugar and confectionary, vegetables, melons and gourds, fruits, berries and processed products of thereof; fat products; drinks and fermented products and other products. The document establishes a set of nutritional (content of protein, energy, carbohydrates, vitamins, micro elements, etc) and safety (maximum residue levels (MRLs) for heavy metals, micro-toxins, antibiotics, hormones, pesticides and microbiological limits) standards for each product category. Ukrainian health authorities have declared their intention to revisit the norms; however, no published information is available at this point.

Imported food products must meet the same requirements as domestically produced foods. While enforcement of food safety norms has been generally effective, outdated nutritional norms have not been rigorously enforced. The short list of applicable Ukrainian legislation on food safety follows (in English unless otherwise noted):
Food Safety

The Law of Ukraine On Quality and Safety of Food Products and Food Raw Materials (As amended): (The most recent amendments to conform to WTO norms and standards from 2004-05 are provided separately.)

Provisional Procedures of the State Sanitary and Hygienic Expertise (in Ukrainian) (approved by the Ministry of Health, Order #247, dated October 9, 2000).

Veterinary

The Law of Ukraine On Amendments to the Law of Ukraine “On Veterinary Medicine” (summary version);

Phytosanitary

The Law of Ukraine “On Plant Quarantine”

The List of Quarantine Organisms

The Law of Ukraine “On Protection of Rights to Plant Varieties” No. 3116-XII (in English as amended in 2006)

Customs

The Customs Code of Ukraine:

The Law of Ukraine “On Rates of Excise and Import Duty for Some Commodities (Products)” adopted on August 1, 1996

Geographical Indicators

Trade Marks

Section II. Labeling Requirements:

All food products sold in Ukraine must be labeled in accordance with the Law of Ukraine On Quality and Safety of Food Products and Food Raw Materials (see a link to an English version of the Law above). The label must contain the following information:

1) Name of food product;
2) Nominal quantity of food product (weight or volume in metric measurements);
3) List of all ingredients in the food product, including other food products and food additives used;
4) Nutritive values and energy (this category is compulsory for raw products and other products for further processing);
5) Expiry date, or the date of production with indicated shelf life;
6) Storage conditions;
7) Indication of a normative document according to which the product was produced (applicable for domestic food products
subject to compulsory compliance certification);
8) Producer’s name, address and place of production;
9) Terms of use (if any);
10) Presence of genetically modified organisms (GMO) in excess of 0.9% if any; Non presence also must be noted.
11) Consumption warning for food products by certain consumer categories (children, pregnant, senior people, athletes etc.);

The label must be in the Ukrainian language and meet the above aforementioned requirements; therefore, the product cannot enter Ukraine with only a standard U.S. label.

Stick-on tags that meet Ukrainian food safety law requirements are allowed and can be placed on the side or over the standard U.S. label. There are no restrictions as to the number of languages and some products sold in Ukraine have been labeled with as many as ten European languages.

Customs authorities require compliance with Ukrainian labeling import requirements prior to granting final product clearance. Most importers prefer to deal with products already labeled to meet Ukrainian requirements, while others prefer to attach labels in a licensed customs warehouse in Ukraine if this option is granted by control authorities. The Ukrainian Veterinary Service has recently imposed a requirement for Ukrainian language labels on all boxes within a container prior to their unloading from the vessel.

The product’s expiration date (or its shelf life indicated with the date of production) must appear on the label. Although Ukrainian food safety legislation allows producers to determine the shelf life of the product, it is highly advisable to verify with the importer whether it meets the existing Ukrainian technical regulations (GOST or DSTU). There have been some discrepancies between producer-determined shelf life and old Soviet-era technical standards that have allowed the Ukrainian veterinary authorities to block certain seafood products.

The legislation and implementing regulations do not set the rules for label size and format; however, they stipulate that labels must be “easily understood”. It is prohibited to include health claims, make statements targeting particular consumer groups (children, pregnant women, athletes) without prior approval from the MHCU (follow this link for definitions (in Ukrainian)).

In 2010 biotech labeling reappeared in Ukraine after several years’ absence. There are currently 18 labs in Ukraine with some capacity to test and analyze food products for GMO content. Two new laws and a GOU resolution regulate food product labeling in Ukraine at present.

According to the GOU Resolution #661, any food product that contains more than 0.9% of GMOs, or if any ingredient in a food product contains GMOs as well as food products that do not contain any GMOs but are produced at least in part with agricultural products that contain GMOs and the total weight of GMO or GMO derived products is a single food product package exceeds 0.9% of its total weight, this food product has to be labeled “Contains GMO”. If a single package of food product contains no GMOs or less than 0.9% GMOs, it has to be labeled “No GMO.” Products without relevant labeling are not permitted for sale in Ukraine and are a subject to confiscation and fines. GMO food product labeling is a responsibility of the producer/supplier. Stick-on labels may be used.

Law #1778-VI “On Amendments to the Law of Ukraine (Law #771/97) “On Safety and Quality of Food Products” (signed December 17, 2009 and effective December 30, 2009) established the mandatory labeling of food products per their GM content. The labels should read either “Contains GMO” or “No GMO”.

Law #1779-VI “On Amendments to Some Legislation of Ukraine on Providing Information About GMO Content in Food Product” (signed December 17, 2009 and effective two months after publication) relates to the Law of Ukraine #1023-12 “On Consumer Rights Protection” and mandates the development and implementation of the registration system of GM and biotech-derived products as well as food product labeling per their GMO content.

**Section III. Packaging and Container Regulations:**
As a part of the mandatory state sanitary and hygiene testing, the packaging of imported food products is also checked for transfer of polymers (and other elements) to food products. Regulations on Ukrainian packaging requirements can be obtained from the Institute of Ecohygiene and Toxicology of the MHCU (see Appendix I for an address).

Exporters must consider utilization of used/recycled packaging material while planning their shipment to Ukraine. Ukrainian legislation on Waste Products requires the provision on utilization or re-exportation of used packaging materials in the export contract (Article #17, Law # 3073-III dated March 3, 2002).

There are no particular container requirements in Ukraine. Due to small shipment volumes from overseas, exporters should be prepared to ship mixed product loads in one container. A separate health or veterinary certificate for each homogenous product lot in the container is required. Odessa and Illichivsk Sea Ports are by far the largest ports for handling containerized cargoes in Ukraine and can accept general-purpose containers. Both ports can handle refrigerated containers. It is highly advisable to verify with the freight forwarder whether or not other ports can process a particular cargo, pallet or container size.

In cases where U.S. legislation allows for reuse of packaging, all old labels must be completely removed from the boxes found within a container. FAS-Kyiv is aware of cases when double labeling caused problems for a U.S. exporter. Separate packaging or disinfectant requirements apply to many products subject to veterinary control. In such cases the requirements are clearly indicated in the bilateral health certificate (see FAIRS certificate report for links to particular veterinary certificates).

Section IV. Food Additives Regulations:

Ukraine is a CODEX Alimentarius Commission member, but it maintains its own positive list of food additives. Recommendations of the CODEX Alimentarius Commission, an international food safety standard setting body, are considered in approving new food additives; however, the MHCU conducts its own risk assessment for each new substance. The list of approved food additives in Ukraine is provided in a separate GAIN Report. It is prohibited to import food products into Ukraine that contain food additives that have not received approval from MHCU.

There are four food additives, which are not on the list of approved additives, but which have been cleared for use in imported products. The Ukrainian sanitary authorities have conducted a food safety risk assessment and have established “maximum allowable levels” (MAL) in order to monitor imported food products. Importers of food products that contain non-registered food additives may seek their registration with the MHCU. There is no information available on the MAL for approved food additives since the GOU discontinued publishing them in January 1999.

Section V. Pesticides and Other Contaminants:

Ukraine establishes its own Maximum Residue Limits (MRLs) for chemical and biological contaminants in food products. An illustrative list of MRLs controlled in the products of animal origin will be submitted as a separate FAIRS subject report. All product specific tests are conducted at the port of entry. No risk analysis is used to reduce test number. The Ukrainian sanitary service recognizes the norms established by the Codex Alimentarius Commission for non-registered pesticides in the case of imported foods.

The use of officially registered pesticides and their application procedures are controlled by the Ministry of Ecology and Natural Resources (MENRU) using the norms established by the MHCU. The MENRU publishes the Catalogue of Pesticides and Agricultural Chemicals Allowed for Use in Ukraine every year. The Catalogue lists all registered pesticides by brand name, active ingredients, MRLs in different agricultural products, water, soil and air. Agricultural chemicals not listed in the catalogue cannot be used domestically, and no residues in agricultural products are allowed.

Section VI. Other Regulations and Requirements:

Agricultural and food products imported into the customs territory of Ukraine shall be subject to sanitary testing, compulsory certification, radiological, veterinary and/or phytosanitary inspections. Due to the complexity of Ukrainian food safety
regulations, FAS Kyiv has prepared a single table to illustrate the types of controls exercised on imported products by the Harmonized System (HS) of Codes. Sanitary and veterinary inspections have been combined into one category for convenience, although, a separate veterinary inspection is conducted for the products that fall under the following HS categories: 01-05; 07; 10; 12; 14-16; 19; 21 and 23.

**Sampling and Testing Requirements**

Sampling and testing of imported products are regulated by the Cabinet of Ministers Decree # 833 adopted on June 14th 2002. The Decree defines “uniform allotment of the product” and establishes sample sizes and sampling time. The uniform allotment of product is defined as any quantity of the product of the same kind, name, production date, processing method, produced by the same shift with the same technological regime.

For fish uniform allotment may be comprised of up to 5 consecutive production dates with sample size of 5-6 kilograms, but no less than 5 fishes if weight of 1 fish exceeds 3 kilograms. For canned food products one allotment is limited to 1 date and 1 production shift of 1 producer. For milk and dairy product allotment is limited to 1 sort, 1 producer, 1 technological cycle and 1 production date. Uniform allotment for feeds is limited to 1 load, but no more than 100 tons. Allotments of any product must not exceed 1 railway car, 1 truck or 1 tanker or tank. Each allotment must be accompanied by the certificate that insures safety and quality of the product.

Given total sampling and testing of imported products in Ukraine, sampling (especially of expensive products such as caviar, fish or chilled meat) as well as testing fees may pose a significant burden on the importer. In many cases the U.S. exporter may receive a request from the importer to put as few “uniform allotments” in the container as possible. FAS/Kiev is aware of cases when as many as 19 uniform allotments were discovered in one 25 ton refrigerated container by Ukrainian Veterinary Service. Testing fees and product loss due to sampling completely consumed the anticipated profits for that particular shipment.

The potential importer should be prepared for inevitable losses associated with testing of product. All imported commodities undergo testing at destination point, although in ports only random testing is performed. The testing period may vary from 4 days for certain meat products to 15 days for canned products. To get more information about particular product testing time and sampling, the importer is advised to contact FAS/Kiev office, since the list is quite extensive.

**State Sanitary Inspection of Food Products**

The state sanitary inspection of food products is the major control element in the Ukrainian food safety system. It is especially true for processed products that are not subject to veterinary and/or phytosanitary control. The State Sanitary and Epidemiological Service of the MHCU tests imported food products for compliance with the Medical and Biological Requirements and Sanitary Norms of Quality of Raw Food Materials and Food Products (please refer to Section I of this report). The MHCU will grant the certificate of state sanitary and hygiene testing to the importer upon the completion of required testing. The importer or producer must pay for such testing for each food product.

**Certification**

The Ukrainian certification system is based on the Law on Standards, Technical Requirements and Compliance Evaluation Procedures and the Law on Standardization. The Laws define the development and application of standards and technical regulations. It also grants the State Committee of Ukraine on Technical Regulations and Consumer Policy (SCUTRCP) as the authority in charge of certification and compliance. This authority in most cases duplicates the functions of the state veterinary, phyto-sanitary and sanitary safety systems that are run by the Ministry of Agricultural Policy and Ministry of Health of Ukraine, respectively. The importer should be ready to meet these requirements despite language in the Law on Standardization that states compliance with Ukrainian state standards is voluntary.

The major controlling agencies: the State Customs Service, State Border Control, Ministry of Health, Ministry of Agricultural Policy, Ministry of Culture and Tourism, Ministry of Environment, Ministry of Transport and Communications adopted joint Order No. 265/211/191/210/14/147/326 on March 27th, 2009 which separated the authorities among agencies and excluded the SCUTRCP from controlling functions. At the same time conformity certification remains compulsory for
certain processed products. The list of products subject to compulsory certification is provided in a separate GAIN Report.

Certification of imported products will be tested for compliance with state quality standards (GOST – old soviet standards or DSTU – Ukrainian national standards) and safety norms (tolerance levels of toxic elements, pesticides, micro-toxins, bacterial contamination and radio nuclides). Neither GOSTS nor DSTUs are available on the Internet, although an interested importer can purchase them from specialized shops, industry associations or from the SCUTRCP itself.

There are more than 100 institutions that are authorized to conduct certification under the Ukrainian State Certification System (UkrSEPRO). The importer should seek out the lowest certification price. In most cases the samples are collected independently from the samples collected for the sanitary and veterinary inspections, thus an importer should be ready to pay the additional associated charge. It is unclear on what grounds and under what circumstances SCUTRCP honors sanitary and veterinary labs tests, but FAS Kyiv is aware of such cases.

The applicant is charged the cost of the certification (either exporter or importer). There are usually two options available to exporters and importers depending on the value and the frequency of shipments. The first option requires compliance by a foreign facility to existing Ukrainian norms and regulations on quality and safety. The supplier receives a certificate of conformity valid for two to three years. This approach avoids the requirement of certifying each shipment. The second option involves certification of each product shipment with mandatory laboratory tests upon arrival in Ukraine. The SCUTRCP is in charge of conformity certification procedures and either grants or denies issuing valid certificates for eligible food products sold in the customs territory of Ukraine. The SCUTRCP also maintains the Single State Register of Certified Products.

Ukrainian importers will likely demand a Quality Certificate (QC) from the U.S. exporter. This establishes a whole new type of certificates. This certificate has no connection to the Ukrainian certification bodies and can be viewed as a generic wholesomeness certificate issued by the producer. Normally the QC requested of the U.S. producer/supplier will contain the following:

- Name of the producer and facility number;
- Name of the supplier (if different from the producer);
- Statement that the product “fits for human consumption”;
- Number of the containers in the shipment (if more than 1);
- Net weight of the product in the container;
- Number of boxes supplied;
- Production date(s) (usually only month of the production is required);
- Expiry date (shelf life) of the product.

Being a semi-official document (not bilaterally negotiated and agreed) it speeds up both customs and veterinary procedures, so the QC is demanded by both authorities. Usually the QC will be on the company letterhead and written and may be under the signature of different employees, depending on Company’s operational structure and availability.

U.S. exporters may also refer to the Country Commercial Guide prepared by the Foreign Commercial Service of the U.S. Department of Commerce in Kyiv to learn more about certification in Ukraine and recognition of the international ISO-9000 series standards in Ukraine (Chapter 5: Trade Regulations). A link to the above mentioned report is located in Appendix I.

Phytosanitary Inspection

In cases when phytosanitary inspection of food and/or agricultural products is required, the exporter(s) or freight forwarder(s) are advised to obtain a copy of the Import Permit issued by the MSPQIS prior to applying for the Federal Phytosanitary Certificate, PPQ Form 577 issued by USDA’s Animal and Plant Health Inspection Service. The Import Permit contains product-specific requirements, including disinfectant and/or de-infestation treatment. If such treatment is required, the PPQ Form 577 should contain the necessary information on the chemical, concentration used, duration, temperature and date of treatment.
An initial inspection of the cargo will be conducted at the port of entry by Ukrainian Phyto-sanitary inspectors. Product samples will be taken and laboratory tests conducted to verify that live quarantine pests are not present in the cargo. The list of quarantine pests is available here. Products have to be either fumigated for a second time or refused entry if quarantine pests are found alive at the port of entry. The local branch of the MSPQIS conducts the secondary phytosanitary inspection of the cargo at an in-land point of cargo destination to verify compliance with import conditions. Products receive the final phytosanitary clearance following the second inspection. The complete list of products subject to compulsory phytosanitary inspection is provided in a separate GAIN Report.

**Veterinary Inspection**

The requirements for products that are subject to state veterinary surveillance and control are governed by Order #71, which was adopted by the State Department of Veterinary Medicine (SDVM) on June 14, 2004. The order contains a complete list of products under their control and lists the requirements for each product. The list is following:

- Brood cattle;
- Bovine semen;
- Bovine embryos;
- Cattle for slaughter, sheep and goats;
- Brood sheep and goats;
- Ovine semen;
- Brood horses;
- Swine semen;
- Pigs for slaughter;
- Racing horses;
- Temporarily imported racing horses for sport horse competitions;
- Horse semen;
- Horses for slaughter;
- Day-old cheeks and hatching eggs;
- Fur animals, rabbits, dogs, cats;
- Wild animals for zoos and circuses;
- Fish, Live fish, fish roe, crustaceans, molluscs, and other aquatic animals;
- Honeybees, bumble-bees, and Alfalfa Leaf-cutting bees;
- Reindeer;
- Camels;
- Primates;
- Red meats and meat products;
- Poultry;
- Horse meat;
- Canned meat, sausages, and other ready to eat products;
- Rabbit meat;
- Milk and dairy products;
- Meat of wild animals;
- Fish, seafood and ready to eat seafood products after thermal treatment;
- Hides, horn-hoof, furs, sheep pelt, lambskin, goat under fur raw material, wool, hair coat, horsehair, down and feather of chicken, duck, goose, and other species;
- Feed fishmeal;
- Ready to use feeds and feed additive of animal origin, including those made of poultry and fish;
- Feeds and feed additive of animal origin, including those made of poultry and fish;
- Feeds of plant origin (feed grains, soybeans, soybean and almond meals);
- Pet food.

Prospective U.S. exporters should refer to the list even if the commodity in question is not subject to veterinary control in the U.S. Ukrainian state veterinarians will conduct inspections at the border of animal feeds of plant origin (such as soybean meal), ready-to-eat seafood products and frozen fish. FAS Kyiv advises a potential U.S. exporter contact their Ukrainian
importer or agent to get accurate updates on most recent changes to the list. Currently, there is no distinguishing line of authority that separates the SDVM from the State Sanitary and Epidemiological Service in animal products, so in some cases inspections from both organizations could be demanded. FAS Kyiv is unaware of cases when veterinary inspections were conducted on products other than those listed above.

Every shipment arriving in Ukraine will be inspected and sampled regardless of the statements made in the accompanying health certificate. The exporter or importer will have to bear the costs associated with border lab testing or the cost of appeal, which is arbitrated at the Central Laboratory of the Veterinary Service. The cost of testing varies between $80 and $500 depending on the number of tests required and the number of uniformed lots in the shipment. The testing procedure takes up to 7 days, which makes importing some highly perishable goods impractical or impossible. In some cases Ukrainian veterinarians may examine a shipment for compliance with Ukrainian State Standards (GOSTs and DSTUs). The importer should be aware that product shelf life terms in the Ukrainian Standards are often shorter than those, adopted in the U.S. Imported products may remain wholesome according to the U.S. export certificate, but have expired shelf life according to Ukrainian standards. U.S. exporters are advised to contact their Ukrainian partners to avoid this problem.

Sampling of imported products is conducted according to the Cabinet of Ministers Decree #833, of June 14, 2002. The Decree defines “uniform allotment” for different products of animal origin. In many cases it is a product produced by one enterprise during one production cycle, but often there are severe time limits for production dates. In some cases the Ukrainian veterinary service defines allotments based on production dates (boxes produced 5 days apart or by different shifts maybe defined as belonging to different allotments). Many Ukrainian importers will request that their U.S. exporters ship fewer allotments to avoid excessive sampling, testing and long delays. U.S. exporters should be advised that none of the existing bilateral certificates requires veterinary inspections of U.S. facilities.

Protocols for exporting animals to Ukraine are available through the International Regulations Retrieval System (IRRS) of USDA’s Animal and Plant Health Inspection Service at the following address: [http://www.aphis.usda.gov/regulations/vs/iregs/products/product_ukraine.shtml](http://www.aphis.usda.gov/regulations/vs/iregs/products/product_ukraine.shtml)

For frozen fish and seafood products, an exporter is advised to contact the proper U.S. Competent Authorities. An export certificate can be issued by either the U.S. Food or Drug Administration (FDA): [http://www.fda.gov/AnimalVeterinary/default.htm](http://www.fda.gov/AnimalVeterinary/default.htm) or (in case of fish and other aquatic animals) by the National Oceanic and Atmospheric Administration (NOAA) of the U.S. Department of Commerce: [http://www.noaa.gov/](http://www.noaa.gov/) for frozen fish import regulations and standards.

In case of a discrepancy between statements required by Ukrainian SDVM Order #71 and those made in the negotiated U.S.–Ukraine Health/Veterinary Certificate, the official certificate will prevail. The complete list of products subject to compulsory veterinary inspection is provided in a separate GAIN Report.

**Radiological Inspection of Food Products**

Following the Chernobyl accident in 1986, the GOU rigidly controlled food contamination of radionuclides in order to protect consumers. In 1997, the MHCU approved the state hygienic norms (so called DR-97) that established the maximum allowable levels (MAL) for the two most occurring radionuclides – Cesium-137 (137Cs) and Strontium-90 (90Sr). Tolerances for Cesium-137 (137cs) and Strontium-90 (90sr) in food products and water can be obtained from FAS/Kiev on request.

**Samples Shipped Via Express Mail**

Samples worth less than €200 can be cleared duty-free according to Ukrainian legislation. The regulations do not distinguish product samples from food products; therefore, samples shipped via express mail could be subject to sanitary, veterinary, phytosanitary, radiological and ecological inspection if the customs officer determines that such control is necessary.

**Section VII. Other Specific Standards:**

**Pet Food and Feed Additives**
According to Article 14 of the Law of Ukraine “On Veterinary Medicine”, the State Scientific and Control Institute of Veterinary Drugs and Feed Additives (Appendix I) conducts assessments for pet food and feed additives in Ukraine.

The official document for pet food or feed additive registration in Ukraine is the Registration Certificate. Purchase and utilization of pet food and feed additives that are not registered in Ukraine is prohibited. The Registration Certificate and the Manufacturer’s Quality Certificate are mandatory documents and must be presented at the point of entry into Ukraine.

A company, that applies for registration will assume all costs associated with the procedure. Experts from the State Scientific and Control Institute of Veterinary Drugs and Feed Additives will establish a separate registration procedure for every pet food or feed additive sample. Field trials may be required for some products. The cost of registration is $600 to $3,200 depending on the number of tests and field trials. The cost will be lower if a group of similar products is registered. The procedure should not take longer than 90 days, but it depends on the accuracy of documents and samples sent. Additional information concerning registration of pet food and feed additives can be found on the Institute’s web site at http://www.scivp.lviv.ua/

If the Institute approves the product, the exporter will receive a 5-year registration certificate. When the 5-year term expires, the company will be required to renew the certificate. In this case the Institute will not request a product sample, but only for a set of documents, and the procedure will be somewhat quicker and cheaper.

Seeds

Seed exporters should note that prior to importing seeds for commercial release to Ukraine, each plant variety has to be registered with the State Service on Right Protection for Plant Varieties. The entire registration process may take up to three years and cost the applicant (variety owner, exporter or importer) $5,000-$10,000 depending on the type of crop and the extensiveness of field trials. This charge includes expenses needed for field trials and the maintenance of the variety in the Registry in Ukraine. Currently only a few U.S. corn and sunflower hybrids are included in the State Registry in Ukraine.

Plant varieties that show consistently good performance usually receive a temporary registration after the second year and can be allowed for marketing to farmers. The Ministry of Agrarian Policy and Food Supplies of Ukraine (MAPFSU) can also issue single-time permits for commercial seed imports that do not require plant variety registration if it deems such imports as urgent and necessary.

At the time of a seed shipment, the exporter should plan for a 3-5 day seed certification period in Ukraine. The State Seed Inspection Service of the MAPFSU inspects imported seeds for compliance with the Ukrainian state quality and purity standards even if a valid Orange International Seed Lot Certificate accompanies the shipment.

Special Food Products
Dietary, prophylactic food products, biologically active agents, baby food and food for athletes are considered special food products in Ukraine (follow this link for definitions (in Ukrainian)). The importer must register special food products with the Ministry of Health Care of Ukraine prior to importing them into Ukraine. After a positive verification of health claims and a food safety risk assessment, the product will be included into the State Register of Special Food Products of Ukraine (the link is in Ukrainian).

**Section VIII. Copyright and/or Trademark Laws:**

Protection of intellectual property rights is weak in Ukraine. Piracy is a common problem for domestic and foreign food suppliers with well-known consumer brand names. Ukraine is a member of the World Intellectual Property Organization, although, U.S. exporters may consider registering their brand names in Ukraine. See Appendix I for contact information for the State Committee of Ukraine on Intellectual Property (SCUIP), which is the GOU’s agency responsible for the protection of intellectual property. Suppliers should work closely with their local distributors to identify any case of piracy and report them to local law enforcement agencies or to intellectual property rights inspectors of the SCUIP.

**Section IX. Import Procedures:**

Note: Information in this section is considered accurate at the time of its publication. Exporters should confirm exact import procedures for individual products prior to shipment to Ukraine. There may be specific import requirements for certain products that were not mentioned in Section VII of this report (alcohol, tobacco, etc.). Ukrainian is the only official language recognized in Ukraine. All documents must be bilingual, submitted in Ukrainian or be accompanied by an official translation. End note.

At the planning stage, exporters are advised to check with their importer(s) to identify the types of controls that are applicable to the product(s). Then, it is necessary to make sure that all required inspection services are present at the port of entry into Ukraine. The exporter should choose another point of entry if all of the required inspections services are not performed at a given entry point.

Any food product (except those produced for personal consumption), food raw materials and agricultural products are prohibited entry into Ukraine without documented evidence of their quality and safety. Control over food and agricultural product imports rests with the Customs Service of Ukraine. The product will not be granted final clearance until all legal procedures are met. The following documentation is required for customs clearance:

1. Certificate of conformity (wherever applicable);

2. State sanitary and epidemiological expertise certificate, (or certificate on state registration of special food products);

3. Veterinary certificate (see Sections VI and VII for applicability);

4. Import permit and original phytosanitary certificate (see Sections VI and VII for applicability);

5. A Quality Certificate might be required by Customs and Veterinary Cervices at some border posts.

Labeling of food products and food raw materials must meet the requirements of Ukrainian legislation outlined in Section II.

It is highly advisable to complete mandatory state sanitary and epidemiological testing (#2 above) prior to shipping a product to Ukraine. The Ukrainian importer can submit samples for testing to the Institute of Ecohygiene and Toxicology under the Ministry of Health Care of Ukraine or another institution authorized by the Ministry to obtain a certificate of state sanitary and hygiene testing. All other certificates can be processed at the same time, so it is possible to complete the customs
clearance process in 7 - 10 days including additional required laboratory tests.

**Appendix I. Government Regulatory Agency Contacts:**
