Report Name: FAIRS Annual Country Report Annual

Country: Haiti

Post: Port-au-Prince

Report Category: FAIRS Annual Country Report

Prepared By: Fritzner Cledo

Approved By: Frederick Giles

Report Highlights:

This report is an overview of general legal and technical requirements imposed by Haiti for food and agricultural imports. The following sections of this report indicate the requirements for: Food Laws; Labeling Requirements; Packaging and Container requirements; Food Additive Regulations; Pesticides and Other Contaminants; Other Requirements, Regulations, and Registration measures; Other Specific Standards; Trademarks, Brand Names and Intellectual Property Rights; Import Procedures; and Trade Facility. In 2020, the Government of Haiti changed the import procedures under a new agreement with Governments and Institutions Services (SGS), a private contractor with the government that handles the administrative review of contracts and collecting duties prior to unloading cargo at Haitian ports.

SIM – Inter-American Metrology System
USDA – US Department of Agriculture
VR – Valuation Report
WIPO – World Intellectual Property Organization
WTO – World Trade Organization
EXECUTIVE SUMMARY

Haiti depends on the imports of U.S. agricultural products to fulfill domestic demands. Haiti food legislation has been in place for years, but Haiti continues to readjust its legislation and regulation to international agreements. Although, there is no major changes in Haiti food legislation but the tariff for some agricultural products and the import procedure have changed recently. The Governments and Institutions Services (SGS), a private company is commissioned by the government of Haiti to implement the new import procedure. Exporters are required to register on SGS exporter portal to obtain the certificate of conformity (CoC) and the valuation report (VR) prior to export to Haiti.
SECTION I. FOOD LAWS

The majority of Haiti’s food and trade legislation have been in place for many years. The major laws and other documents that set the requirements for food and agricultural products in Haiti are listed below:

1) Haitian customs code of 2015

2) Haitian rural code 1962
   - Law No 10, related to agricultural industry and animal husbandry
   - Law No 12, related to the trade of foodstuffs, transport and storage of plant and animal byproducts.

3) Haiti’s Amended Constitution of 1987
   - Article 251 related to the import of foodstuffs and byproducts

4) Presidential decrees
   - Presidential decree of October 15, 1950, related to the import of animals
   - Presidential decree of November 12, 1987, related to the regulation of the import of plants, animals and their byproducts

5) Laws
   - Law of August 27, 1934, related to plant and animal health protection
   - Law of August 16, 1950, prohibiting the import of pork without authorization
   - Law of August 26, 1963, prohibiting the import of plants or seeds without authorization of the Ministry of Agriculture, Natural Resources and Rural Development (MARNDR)
   - Law of June 27, 1951, related to the export of plants and bulb of sisal

6) Public notes
   - Decree of July 24, 1937, related to the import of coffee, cacao, and other high crop plants
   - Public statement of March 20, 1984, regulating the import of pork into Haiti
- Public statement of MARNDR and the Minister of Trade and Industry (MCI) of April 1986, related to plant and animal health protection
- Public statement of March 16, 1995, related to the import of carnivorous animals and poultry
- Memo of January 22, 1987, related to plant and animal quarantine

Haiti has signed several international agreements, which reinforce its food and trade policies. As a member of the World Trade Organization (WTO) since 1996, Haiti continues to adjust its legislation and regulation to the legal framework of the WTO. The government of Haiti refers, as well, to the topics covered by the WTO Agreements to fill in the gaps in its trade policy. Haiti is also a member of the Codex Alimentarius Commission, which advocated for the establishment of Codex Alimentarius committees in member states. The Government of Haiti has never established this committee; however, Haiti’s Bureau of Standards (BHN in French) was created in December 2012 to organize and manage activities related to standardization, certification, industrial metrology, promotion of quality, and provision of technical support to companies. Through this bureau, Haiti implements agreements signed with the CARICOM Regional Organization for Standards and Quality (CROSQ), Panamerican Standards Commission (COPANT in Spanish), Standards Network and Francophonie (Réseau Normalisations et Francophonie (RNF) in French), Inter-American Metrology System (SIM in French), American Society for Testing and Materials (ASTM), and Dominican Institute for Quality (INDOCAL in Spanish).

In addition, a November 1987 Presidential decree established the Department of Production and Food Safety (DGPSA in French) within the Ministry of Agriculture, Natural Resources and Rural Development (MARNDR). DGPSA oversees the Office of Animal Quarantine and Control of Fishing and Agricultural Products (DQCSPAP in French). While many products have access to the Haitian market, others are banned or restricted. In addition, some products are banned or restricted from all sources, while other bans or restrictions only apply to products from the Dominican Republic (DR). The list of affected products is provided in Appendix II.

SECTION II. LABELING REQUIREMENTS

The MCI’s Department of Quality Control and Consumer Protection (DCQPC in French) establishes labeling requirements in Haiti. Current requirements include:
Haiti has two official languages: French and Creole. However, with the proximity of the United States and Latin America, labels in English or Spanish are widespread in Haiti. Currently, there are no language requirements for product labels in Haiti.

SECTION III. PACKAGING AND CONTAINER REQUIREMENTS

Requirements for foodstuff packaging and containers are regulated by Haitian standards. In October 2012, the Government of Haiti banned polymers of styrene (polystyrene and expanded polystyrene), polyethylene plastic containers with a density equal to or over 0.94, and polyethylene with density below 0.94.

Hygienic standards for buildings, people and materials that come into contact with foodstuffs are listed in the 2013 general standards of quarantine. This document specifies the chemical products to avoid when handling foodstuffs. The Government of Haiti recommends cleaning and sterilizing all tools after each operation.
For animal products, the exporting country’s sanitary certificate must indicate that the product was prepared and packaged by certified enterprises. Imported plants, flowers, fresh vegetables, and roots must be free of soil.

*General Standards of quarantine*

**SECTION IV. FOOD ADDITIVE REGULATIONS**

Haiti does not have any domestic regulations related to food additives. However, the Ministry of Public Health and Population (MSPP in French), the Ministry of Trade and Industry (MCI), and MARNDR control imports of additives for use in foodstuffs based on international recommendations, including the recommendations of [Codex Alimentarius Commission report (French version)](https://www.fao.org/3/a-i5786e.pdf) and [the Proposal for management of chemical products and waste (French version)](https://www.who.int/healthinfo/science/animal ürünlerineighborsurl). Since July 2015, Haiti has banned wheat flour from the DR due to the presence of potassium bromate and azodicarbonamide in amounts exceeding the recommended levels.

**SECTION V. PESTICIDES AND OTHER CONTAMINANTS**

Legislation and regulations pertaining to pesticides and other contaminants have been pending in the Haitian Parliament since 2017. Meanwhile, MARNDR, MSPP, MCI, and the Ministry of Environment (MDE) control the imports of pesticides and other contaminants. An import permit is required for any entities involved in pesticide trade. The recommendations state that containers should be hermetically sealed, and resistant to choking and humidity. It is prohibited to store and transport pesticides and other contaminants in multiple-use vehicles, which transport foods, beverages and medicines. Additionally, organochloride pesticides are banned from import unless a special authorization is attained. The disposal of pesticide residues is not controlled by any regulations.
SECTION VI. OTHER REQUIREMENTS, REGULATIONS AND REGISTRATION MEASURES

Plant and plant products, animals and animal products (except live animals and domestic animals) require a certificate of conformity and a valuation report before arriving in Haiti. SGS, a private company, is commissioned by the GoH to issue these documents to the exporter upon completing the product verification of conformity program defined in the import procedures section. For details, please refer to the import procedures section below.

Product Registration

Haiti’s legislation does not require a product to be registered before import, except for medical products.

SECTION VII. OTHER SPECIFIC STANDARDS

Food trade is regulated by several entities of the Government of Haiti. Importers should comply with the requirements of MCI, MARNDR, and in specific cases with MDE and MSPP.

Plant and plant products, animals and animal products require an import authorization before arriving in Haiti. This category includes live animals and birds (except domestic animals, which require a zoo
sanitary certificate and inoculation certificate), fresh and frozen meat, eggs, semen and embryos, plants and plant products, seedlings, seeds, fruits, vegetables, and ornamental plants from unaffected areas.

Imports of live animals, plants, and their products are controlled by MARNDR through DQCSPAP. This office issues the required import authorization for live animals, plants, and their products upon receiving the specific information listed below.

Live Animals

For live animals, a request for the import authorization should be submitted to DQCSPAP 25 days before the expected loading date and must include the following information:

- Importer’s name, address and fiscal ID
- Name and address of destination farm in Haiti
- Name and address of farm owner in Haiti (may be different from farm address)
- Import purpose
- Information about imported animals, including country of origin
- Tag numbers of imported animals
- Boarding port name and boarding date
- Zoo sanitary certificate signed by certified veterinary of the exporting country that includes information related to the examination process and indicates the health condition of the animals

Please note that a fee is required for this process. Once the import is approved a copy of the import authorization should be given to any person - captain, pilot or driver - in charge of transporting the animals.

Bans and disease-specific restrictions are listed in Appendix II.

Animal Products
Animal products require a sanitary certificate from the competent authority of the exporting country. This sanitary certificate must include the following information:

- Product name
- Country of origin
- Exporter’s name and address
- Permit number (required only for frozen and fresh meat, eggs, and eggs products)
- Competent authority (e.g., USDA’s Food Safety and Inspection Service)
- Certifying institution name
- Importer’s country
- Port of departure
- Transport type
- Transport and storage condition
- Port of arrival
- Net weight, or volume
- Manufacturing and expiry date
- Container type
- Zoo sanitary certificate signed by certified veterinarian of the exporting country that includes information related to the examination process and indicates the health condition of the animals and sanitary conditions of the animal products

Bans and disease-specific restrictions are listed in Appendix II.

Specific standards for plants

For plants and plant products, an import authorization is required. The request should be submitted to DQCSPAP 25 days before the expected loading date and must include the following information:

- Importer’s name and fiscal ID
- Importer’s address
- Exporter’s name and address
In addition, a phytosanitary certificate is required for plant products from the competent authority of the exporting country. Please note that plant products in cans are exempt from import authorization and phytosanitary certificate requirements.

In addition, plants, flowers, fresh vegetables and roots must be free of any soil. Exporters of seeds must be certified. Bans and restrictions are listed in Appendix II.

Please note that a fee is required for this process. Once the import is authorized a copy of the authorization should be given to any person - captain, pilot or driver - in charge of transporting the plants.

SECTION VIII. TRADEMARKS, BRAND NAMES AND INTELLECTUAL PROPERTY RIGHTS

As a signatory to the World Intellectual Property Organization (WIPO), Haiti continues to adjust its legislation to the legal framework of WIPO. The law of July 22, 1954 sets out provisions for legal protection of trademarks and service marks. The application process begins with a letter request addressed to Legal Service Affairs of MCI, including the following information:

- Applicant’s name and address
- Fiscal ID number
- Printed version of Trademark to be registered
- Branch of activity
- Telephone number and e-mail
- Original of the request and two copies
- Deposit by wire transfer of 152 gourdes to MCI, or address a request to make a direct deposit of 152 gourdes to the Tax Office (DGI)

If the trademark is approved, its protection is granted for ten years by MCI and can be renewed.
SECTION IX. IMPORT PROCEDURES

The Government of Haiti has signed a new agreement with SGS under new import procedures, which are expected to go into effect in January 2021. The newly implemented import procedures can be completed in seven steps gathered into two phases (Pre-shipment and Shipment/Custom clearance).

Pre-shipment requirements

The pre-shipment requirements depend on the free on board (FOB) value of the goods. If the FOB value is below $USD1,000, the importer must submit the commercial invoice or quote, bill of lading, and transport type, plus the freight fee for customs clearance. However, if the FOB value is $USD 1,000 and over, the following steps should be completed prior to import: product verification of conformity and verification of value.

Product verification of conformity

A certificate of conformity (CoC) is required for any shipments valued at $USD 1,000 and over. To obtain the CoC, exporters must submit a request of certification accompanied with the following documents to the Governments and Institutions Services (SGS in French) through the exporter portal: proforma invoice, quality management system certification, conformity documents including but not limited to test reports, quality certificates, and analysis reports. Exporters will have three options to demonstrate the compliance of their products depending on the frequency and the homogeneous nature of their shipments, and their status (manufacturers and non-manufacturers). SGS will reach out to the exporter to conduct the verification process. Additional documents are required on-demand, including physical inspection, laboratory test from International Organization of Standards/International Electrotechnical Commission 17025 (ISO/IEC 17025) accredited laboratories, factory audit, and all relevant documentary verification. At the end of the verification process and after satisfactory results, the exporter has to submit the final invoice for the issuance of the CoC. SGS is commissioned by the Government of Haiti to ensure the quality and the conformity of products, protect local manufacturers against unfair competition from imported products, and facilitate verification of value by Haitian customs.
For food trade, it is recommended that importers verify the status of the products, whether they are banned, controlled, or have free entry (see Appendix II).

Additional documents may include:

- Zoo sanitary or Phytosanitary certificate
- Inoculation certificate
- Laboratory test certificate
- Fumigation treatment certificate

For veterinary medicine

- Officially Approved Laboratory test certificate
- Manufacturer, type of medicine, net quantity
- Usage
- Storage method and expired date

Verification of value

A valuation report is required for any shipments valued at $USD 1,000 and over. However, the valuation report process depends on the FOB value of the goods. If the FOB value of the goods is below $USD 10,000, SGS will only carry out a documentary review and will accept manufacturers’ test reports for parameters defined by the applicable standards as essential or critical. If the FOB value of the goods is $USD 10,000 and over, SGS will conduct a physical or virtual inspection. This virtual inspection will be made through the QiiQ application and the exporter should connect through the inspection website.

Please note that a fee is required for this process. Three methods are proposed to the exporters for the documentary verification and the digital inspections of goods: Route A, which requires a CoC for
any goods and any trader, Route B for frequent exporter with homogeneous products, and Route C for certified products.

Table 1.- Fees structure for documentary verification and the digital inspections of goods

Fee for the valuation report: USD 50.00 per transaction

Shipment and customs clearance

Shipment

Depending on the product, Haitian legislation requires that the manifest provide additional information, such as transport temperature, net weight or quantity and packaging type.

Verification process

At the arrival port, SGS reviews the documentation to ensure that all requirements are met and if physical inspection is required. In addition, SGS confirms the customs classification and submits the customs value of the imported goods.
Physical Inspection

A physical inspection may be conducted by an inspector of the DQCSPAP to verify the documents and control the status of imported goods. For live animals, the inspector may recommend fifteen days in quarantine before release of the animal. If the inspection reveals anything abnormal, the goods may be confiscated or returned to the exporting country.

Customs payments

Customs duties and taxes are required for goods clearance. The cost, insurance and freight (CIF) value of imported goods is used as a basis for the calculation of the import customs duties and taxes. However, the Brussels Definition of Value on the shipment arrival date may be considered independently of the final invoice submitted to SGS prior to export. Taxes include the verification fee (6 percent of CIF), value-added tax (10 percent of transaction value), Contribution to Territorial Collectivities Funds (2 percent of CIF, applicable for some food products), and Special Duty (1 percent of CIF). The payment of customs duties and taxes is collected by Credit National Bank (BNC in French), which is commissioned by Haiti Central Bank (BRH in French).

Customs Clearance

The Customs office requires all importers fill out the customs declaration and submit the following documents for customs clearance:

- A certificate of conformity (CoC)
- A valuation report (VR)
- Customs declaration
- Bill of lading
- Freight cost certificate
- List of products
- Commercial invoice
- Import permit, if required
- Zoo sanitary or phytosanitary certificate, if required
- Certificate of origin
- Laboratory certificate, if required
- Certificate of weight and quality, if required
- Insurance certificate, if required
- Fumigation treatment certificate, if required
The government of Haiti did not make any changes in the trade process except for the above mentioned import procedures and the tariffs for some agricultural products. Exporters are required to register on the SGS portal and demonstrate the compliance of their products prior to export to Haiti. They should submit all documents to SGS, which is commissioned by the GoH to conduct the verification and the inspection. The customs clearance may be completed in 48 hours if all the documents meet Haitian requirements. Traders are required to pay customs duties and taxes for customs clearance. For the fiscal year 2020/21 (September/October), a customs duty of 50 percent is applied to wheat flour, pasta, corn flour, and tomatoes; 30 percent for oranges, apples and pear juice; and 40 percent for condiments and mixed seasonings. In addition, an excise duty of 15 percent is applied to some categories of tomato products.
