Report Name: Food and Agricultural Import Regulations and Standards Country Report

Country: Indonesia
Post: Jakarta

Report Category: FAIRS Annual Country Report

Prepared By: FAS Jakarta
Approved By: Jasmine Osinski

Report Highlights:

This report provides updated technical information for requirements and regulations on food and agricultural products as currently required by the Government of Indonesia (GOI). Sections that have been updated for this year include Food Additive Regulations; Labeling Requirements; Other Requirements, Regulations, and Registrations Measures; and Import Procedures. The appendices have also been updated and a section on Trade Facilitation has been added.
Disclaimer

This report was prepared by the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Jakarta, Indonesia for U.S. exporters of domestic food and agricultural products. While every possible care has been taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. FINAL IMPORT APPROVAL OF ANY PRODUCTS IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

Table of Contents

NO TABLE OF CONTENTS ENTRIES FOUND.

EXECUTIVE SUMMARY

Below is a summary of changes found within the FAIRS Country Report 2021:

- Section II – LABELING REQUIREMENT: updated information on Halal logo requirements
- Section IV – FOOD ADDITIVE REGULATION: BPOM Regulation No. 29/2021 on Mixed Food Additives Requirements, replacing the previous BPOM Regulation No. 8/2016
- Section VI - OTHER REQUIREMENTS, REGULATIONS AND REGISTRATION MEASURES: updated information on dairy products, meat & poultry products, pet food, rendered products and seed
- Section VII: OTHER SPECIFIC STANDARDS:
  - BPOM Regulation No. 05/2021, replacing the previous BPOM Regulation No. 14/2016
  - Ministry of Religious Affairs Decree No. 748/2021, replacing the previous Ministry of Religious Affairs Decree No. 464/2020
- Additional section on Plant-Based Meat and/or Dairy Alternatives that governed under BPOM regulation and has the same regulation with processed food, including the labeling and registration requirements.

- Section IX - IMPORT PROCEDURE: Ministry of Trade issued Regulation No. 20/2021 regarding Import Policies and Arrangement

- Section X - TRADE FACILITATION: Average Release Time

The food safety control system in Indonesia includes a broad range of pre-market and post-market control. Pre-market controls are conducted by evaluating the food safety of products to ensure the compliance with safety and quality requirements prior to retail. If a product meets the necessary requirements, the product is provided with a registration approval number and becomes eligible for retail market. Post-market control is conducted after food products have been distributed in the market and/or retail outlets. The National Agency for Drug and Food Control (BPOM) maintains that it is necessary for Indonesia to focus on the pre-market control due to the wide area of coverage and the sheer geographical nature of Indonesia.

Exporters report that one of the most difficult issues they face is the requirement that all imported retail packaged food products must be registered through BPOM (registration requirements also apply for food produced locally). In addition to registration numbers, some imported products require additional approvals from other Government of Indonesia (GOI) regulatory agencies. For example, an import recommendation from the Ministry of Agriculture (MOA) is required in addition to an import permit from the Ministry of Trade (MOT) for animal products. Imports of meat, poultry, dairy and horticultural products can be subject to shifting regulation and requirements. Food additives require approval from the BPOM, and special labeling requirements may apply. Indonesia requires Indonesian language labels, although currently supplementary labels (stickers) can be added. Mandatory labeling information includes product name, ingredients list, weight or net volume, name and address of the manufacturer or importer, Halal marking (if required), date or production code, use by date, BPOM registration number, and the source of certain food products.

On November 2, 2020 the GOI issued Law No. 11/2020 (original Indonesian copy) on Job Creation that amended several previous laws including those on fisheries, agriculture, halal certification and the food sector. The new law aims to simplify investment-related laws to generate a more competitive business climate. Several implementing regulations for this law have been issued this year, including:

- Government Regulation No. 5/2021 regarding the Administration of Risk-Based Business Licensing
- Government Regulation No. 26/2021 regarding the Administration of the Agricultural Sector
- Government Regulation No. 29/2021 regarding the Administration of the Trade Sector
Government Regulation No. 39/2021 regarding the Administration of Halal Products Assurance Sector

Ministry of Agriculture Regulation No. 15/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration in the Agricultural Sector

Ministry of Trade Regulation No. 20/2021 regarding Import Policies and Arrangement

BPOM Regulation No. 10/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration in the Drug and Food Sector.

SECTION I: FOOD LAWS

Indonesia’s Food Law No. 18/2012 is a comprehensive regulation covering all food and food products. An unofficial English translation of the Food Law can be viewed at the following link.

Food Law No. 18/2012 regulates all food and food products, defined as all food originating from biological agricultural sources. Biological agricultural sources include agriculture, plantations, forestry, fishery, livestock, aquaculture and water. Products originating from biological agricultural sources include processed and unprocessed products intended as food and/or beverages for human consumption, food additives, raw materials, and other materials utilized in the preparation, processing, and/or production of food and/or beverages.

Law No. 18/2012 also states that the food supplies should always be sufficient, safe, high quality, diverse, affordable, and may not conflict with religion, beliefs and culture, noting the importance of food systems protecting producers as well as consumers of food. The Government of Indonesia (GOI) asserts that its food system is designed to fulfil basic human necessities which provide fair, equal, and sustainable benefits based on the concepts of food resilience, self-sufficiency, and food security.

According the GOI, the new Food Law is intended to provide a legal basis to regulate the following activities: (1) food planning; (2) food availability; (3) food affordability; (4) nutrition and consumption; (5) food safety; (6) food labeling and advertising; (7) control; (8) food information system; (9) food research and development; (10) food institution; (11) public participation; and (12) enforcement. Currently, the existing implementing regulations are still valid until new implementing regulations are issued in accordance with the Law.

One aspect of the Food Law is food importation. If local food sources are insufficient, food can be fulfilled through imports (Article 14 point 2 and Article 36-40). The regulation instructs policy makers to establish food import policies and regulations that increase production without negatively impacting farming sustainability, farmer and fishermen’s welfare, and food
businesses. The GOI consistently prioritizes domestic food production over imports to meet demand.

Other significant legislation concerning food and agricultural imports include (all links are to original Indonesian copies):

- Law No. 12/1992 regarding Cultivation of Plants
- Law No. 16/1992 regarding Animal, Fish, & Plant Quarantine
- Law No. 20/1997 regarding Non-Tax Government Revenue
- Law No. 8/1999 regarding Consumer Protection
- Law No. 10/1995 and Law No. 17/2006 regarding Customs
- Law No. 31/2004 and Law No. 45/2009 regarding Fisheries
- Law No. 20/2008 regarding Micro, Small, and Medium Businesses
- Law No. 18/2009 regarding Animal Husbandry and Animal Health
- Law No. 36/2009 regarding Health
- Law No. 13/2010 regarding Horticulture
- Law No. 18/2012 regarding Food
- Law No. 19/2013 regarding Farmers Empowerment and Protection
- Law No. 3/2014 regarding Industry
- Law No. 7/2014 regarding Trade
- Law No. 20/2014 regarding Standardization and Conformity Assessment
- Law No. 28/2014 regarding Copyright
- Law No. 33/2014 regarding Halal Products Assurance
- Law No. 41/2014 on the amendment of Law No. 18/2009 regarding Animal Husbandry and Animal Health
- Law No. 20/2016 regarding Brand and Geographical Indication
- Law No. 21/2019 regarding Animal, Plant, and Fish Quarantine
- Law No. 22/2019 regarding Sustainable Agricultural Farming System
- Government Regulation (PP) No. 69/1999 regarding Food Label and Advertisement
- Government Regulation (PP) No. 82/2000 regarding Animal Quarantine
- Government Regulation (PP) No. 102/2000 regarding National Standardization
- Government Regulation (PP) No. 14/2002 regarding Plant Quarantine
- Government Regulation (PP) No. 28/2004 regarding Food Safety, Quality, and Nutrition
- Government Regulation (PP) No. 18/2012 regarding Domestic Waste Management
- Government Regulation (PP) No. 95/2012 regarding Veterinary Public Health and Animal Welfare
- Government Regulation (PP) No. 17/2013 regarding the Implementation of Law No. 20/2009 regarding Micro, Small, and Medium Businesses
- Government Regulation (PP) No. 6/2013 regarding Empowerment of Livestock Farmers
- Government Regulation (PP) No. 47/2014 regarding Control and Mitigation of Animal Diseases
In addition to the Laws and Government Regulations listed above, there are various Presidential Instructions, Ministerial Regulations, Ministerial/Agency/Institutional Decree regulating food production, imports, and distribution.

Many of Indonesia’s regulations related to the marketing of food and food products are unclear and confusing, not enforced, or are enforced on a cursory basis in a haphazard manner. While a review of relevant regulations is important, the reality of what occurs in practice may be quite different. Therefore, it is essential that exporters confer with local importers/agents to determine prevailing requirements on imports.

SECTION II: LABELING REQUIREMENTS

Food labeling provisions are covered in Food Law No. 18/2012, Chapter VIII, Articles 96 – 103, and advertisement provisions are listed under Articles 104 - 107. BPOM Regulation No. 13/2016 regulates processed food claims and advertisements, and BPOM Regulation No. 31/2018 (amended by BPOM Regulation No. 20/2021) regulates labeling requirements for processed food products. Products imported for retail distribution must be labeled in Bahasa Indonesia before arrival. A label is one of the requirements that must be submitted upon product registration at BPOM.

A. General Requirements

Food label information includes anything represented in the form of a picture and/or in writing. Information in other forms accompanying the food, which is placed in, affixed to, or constitutes part of the food packing is also considered part of the food labeling. Any person producing or
importing food which is packed for retail (i.e., not packed for the food service or institutional sectors) into the territory of Indonesia is obligated to place a label on, within and/or at the packing of the food.

The supplementary label shall be done in such a way so as not to easily come off, fade or be damaged, and shall be placed in a visible and readable position on packages. In Indonesia, stickering is allowed. The supplementary label should be affixed prior to customs clearance (before arriving at the Indonesian territory) and must be in accordance with the label approved by BPOM during the product registration number application process. Statements or claims on the benefit of the food product shall only be included if they are supported by scientific facts which can be accounted for.

The label for retail food must include the following information:

a. The name of the product
b. Ingredients list
c. Net weight or net volume
d. The name and address of manufactures or importer
e. Halal logo (if applicable)
f. Date and/or production codes
g. The expiration date, month and / (best before, except for wine, beverage with alcohol content >10%, vinegar, sucrose and bread/cake with shelf life <24 hours).
h. BPOM Registration Number (ML for imported food products; MD for domestically produced food products)
i. The source of certain food ingredients

If the product is intended for business sale and to be processed as other food, the label must contain at least point a, c, d, f, and g on the above requirements.

In addition to the information above, the GOI may determine other information that may or may not be mentioned on food labels. The information on the labels shall be written or printed in the Indonesian language (Bahasa), Arabic numeric and Roman text. The use of foreign terms may be conducted if there is no Bahasa Indonesia equivalent. The use of backgrounds, in the form of pictures, colors, and other decorations, which can obscure the writing in the main part of label, is prohibited.

U.S. labeling standards are not considered false or misleading by Indonesian standards, although they are different. For example, Indonesia maintains its own Acceptable Daily Intake (ADI) or Maximum Tolerable Daily Intake (MTDI) levels, set through BPOM Regulation No. 9/2016. The standard U.S. nutritional fact panel format is acceptable.
B. Other Labeling Requirements

In addition to the labeling criteria outlined above, processed food labels must state nutritional facts as well as indicate if a food product has been irradiated, is organic, or contains GMOs. Labeling should also include preparation instructions (baby formula, food for pregnant women, special diet foods), storage instructions (ice cream, bottled water, processed meat), serving suggestions, intended use (infant, toddler, pregnant women, breast feeding mother, athlete), and warnings as required.

2D Barcode

Based on BPOM Regulation No. 33/2018, processed food products (except for special nutrition food) that obtained a registration number after December 7, 2018 are required to have a 2D Barcode Identification on the product label. This 2D Barcode Identification is issued by BPOM and contains information on the registration number (M/L) and expiration date of the product. Special nutrition food requires 2D Barcode Authentication that can be issued either by BPOM or business entity and has more detailed information, including:
   a. Registration number
   b. Batch number/production code
   c. Expiration date
   d. Serial number of the product

Nutritional Facts Label

Nutritional labeling guidelines were issued in January 2005 and amended in 2011. The law requires industry to include labeling on nutritional content information. Misleading information is prohibited, and violations are subject to criminal prosecution. BPOM updated guidance on product claims and advertising for processed food in 2016 (replacing the 2011 BPOM regulation) as well as a regulation on Nutrition Labeling (replacing the 2007 BPOM regulation). Packaging must provide safety assurances regarding contamination.

BPOM Regulation No. 22/2019 requires all processed food to include information on nutritional value on the label, except for powdered tea and coffee, tea bags, mineral bottled water, herbs, spices, seasoning, alcoholic beverage, and condiments.

**Additional Information on Food Labeling for Certain Products**

a. **Food Containing Pork**

A label containing the words "MENGANDUNG BABI" (contains pork) should be affixed on products of pig origin. The label should be written in red and enclosed in a red rectangle together with a drawing of a pig in white background, as shown below:

![MENGANDUNG BABI](image)

Food products that may originate from pork include gelatin, enzymes, fat, collagen, colostrum, blood extracts, hydrolyzed hemoglobin, keratin hair extracts, placenta, protein, thymus extracts, thymus hydrolysate, stomach extracts, ingredient (stearic acid, palmitic acid, glycerol) oils, kidney extracts, shortening, thickeners, emulsifiers, stabilizers, l-cysteine, monoglycerides, diglycerides, triglycerides, nisin.

Food products that have come into contact with substances of pork origin during production shall be affixed a label written: “Pada proses pembuatannya bersinggungan dan/atau menggunakan fasilitas bersama dengan bahan bersumber babi” (in contact with and/or using a common facility with substances of pork origin during production process) as shown below:
b. Food & Beverage Containing Alcohol
Processed foods containing alcohol must state the alcohol level contained (percentage) on the label as well as the carryover alcohol on the product.

Labels for alcoholic beverages must include:
- “MINUMAN BERALKOHOL” (alcoholic beverage) and the type of the alcoholic beverage in accordance with food category classification.
- DIBAWAH UMUR 21 TAHUN ATAU WANITA HAMIL DILARANG MINUM (prohibited for people under 21 years or pregnant women)
- “Mengandung alkohol ±...% (v/v) (Contains alcohol ±...% v/v)

c. Foods for Special Nutrition or Dietary Use
Labels for processed food for special dietary or medical needs/special nutrition (abbreviated as PKGK1) is regulated under BPOM Regulation No. 24/2020 and must include:

a. Type of the product
b. Product indication/information about those who may consume the product
c. Preparation instructions if the product needs special preparation.
d. Serving instructions
e. Storing instructions
f. Notices for requirements or warnings
g. Information on nutritional value
h. The words ‘‘KONSULTASIKAN DENGAN TENAGA KESEHATAN’’ (consult with medical specialist) should be written on the product for special dietary-processed food products.
i. Label for processed food products intended for medical needs should include:
   - “HARUS DENGAN RESEP DOKTER’’ (By medical prescription only)
   - “Produk bukan untuk Penggunaan Secara Parenteral” (Product is not intended for parenteral use)
   - Osmolality value for products intended for internal use through nasal gastric tube.

Other additional information including protein sources must be stated clearly.
Nutritional and health claims, as well as irradiation treatment, are prohibited for PKGK products intended for infants, children, and pregnant or breastfeeding mothers.

---

1 There are two types of PKGK:
- Processed food for special dietary needs e.g. infant/toddler/child formula, Breast Milk Complementary Food (MP-ASI), athletic nutrition, food for pregnant/breastfeeding mothers, and weight loss products.
- Processed food for medical needs e.g. malnutrition, inborn errors of metabolism, premature babies, lactose intolerance, diabetes, chronic liver disease, etc.
d. Baby Foods (Infant Formula² and MP-ASI³)

Baby food is included in the category of special nutrition. Labeling requirements for infant formula and Breast Milk Complementary Food (MP-ASI) are described in BPOM regulations No. 03.1.52.08.11.07235/2011 and No. 3/2014, and updated in BPOM Regulation No. 24/2020. In addition to the special nutrition labeling requirements listed above, baby food labels must include the following information:

For infant formula

a. “Perhatian Penting” (Important notice) or any similar phrase should be written on the product.

b. “Produk Formula Bayi bukan merupakan produk steril oleh karena itu perhatikan petunjuk penyiapan.” (Infant formula baby product is not a sterile product; therefore, please notice the preparation instructions.)

c. “ASI adalah makanan terbaik untuk bayi anda” (Breastmilk is the best food for your baby) or a similar sentence stating the superiority of nursing/breastfeeding.

d. Statement that the product can be used only on instruction from a medical doctor with information on the correct usage.

For MP-ASI

a. A statement that MP-ASI meals and snacks are not intended for consumption by babies under 6 months of age unless medically prescribed.

b. Information about acceptable daily intake for babies (6 to 12 months) and children (12 to 24 months).

e. Allergens

Materials that may cause allergies should be stated. These include cereals containing gluten (wheat, rye, barley, oats, spelt), shellfish, eggs, fish, peanuts, soybeans, milk (including lactose), tree nuts, sulfites (>100 ppm), and all processed products containing these ingredients, with the exception of highly refined food.

f. Processed Food Containing Food Additives

Food labels containing food additives must contain the following information: the food additive group’s name (i.e., antioxidant, artificial sweetener, preservative, food coloring, enhancer); the food additive’s name; and the food additive’s registration number. Carry-over food additives must be written after the names of food additives.

Labeling information for food containing artificial sweeteners must include:

- The statement “containing artificial sweetener.”
- If applicable, the label must indicate if the product should not be consumed by children under 5 years’ old, pregnant women, and breast-feeding mothers.
- Sweetener level content (mg/kg, percentage, or mg/serving).

---

² Baby food intended for infants under one /of age
³ Baby food intended for infants 6-24 months of age in conjunction with breastmilk
• If applicable, the label must state “For people with diabetes and/or people who require a low-calorie diet.”
• Products containing aspartame must state “contains phenylalanine and is not suitable for phenylketonuric patients” and “not suitable for food that will be heated.”
• Products containing polyol must state “excessive consumption has a laxative effect.”
• Sugar equivalence (comparison to sucrose)
• Acceptable Daily Intake (ADI)

Products containing food coloring should include the following label information:

Color Index (CI)
• “PEWARNA PANGAN” (food coloring) or “PEWARNA MAKANAN” (food coloring) in a green box and written with green capital letter, shown below:

PEWARNA PEWARNA

• M (Makanan or food) logo in a black circle, as shown below:

M

BPOM Regulations prohibit claims that a product is free from food additives on food labels and in advertising. Food additives include antioxidants, anti-caking agents, acidity regulators, artificial sweeteners, bleaches, emulsifiers, stabilizers, thickeners, firming agents, preservatives, colors, flavors and flavor enhancers, and sequestrants. Prohibited statements include the word “free,” “without,” “no content,” or other similar words.

BPOM Regulation No. 23/2016 (replacing BPOM Regulation No. HK 00.06.1.52.6635 of 2007) specifies when and how food manufacturers may label food free of additives. The label statement “without certain food additives” can only be used to refer to artificial sweeteners, preservatives, synthetic food colorings, antioxidants, and food enhancers. Labeling claims cannot specify they are free from a specific sweetener but can state they “do not contain artificial sweeteners” generically.

g. Halal
According to Law No. 33/2014 on Halal Product Assurance, a new agency under the umbrella of the Ministry of Religious Affairs (MORA), called the Halal Product Assurance Organizing Agency (BPJPH), has the authority to issue and revoke Halal Certificates and Halal Labels on products.
The 2014 Halal Product Assurance Law, also known as the Halal Law, came into force on October 17, 2019; however, a grace period for food and beverage products is in place until October 17, 2024. Even before the Halal Law was enacted, halal certification and labeling were already mandatory for imports of meat and meat products, poultry and poultry products, and dairy. But under the new Halal Law, it is anticipated that all food and beverage products will require mandatory halal certification and labeling (or non-labeling for non-halal products). At the end of the grace period, products that have not obtained a halal certificate must include non-halal remarks.

Non-halal information can be a picture, sign, and/or word that is attached to the product packaging, specific part of the product, and/or specific place on the product. Examples of non-halal information can be seen in the above section: Additional Information on Food Labeling for Certain Products, Part (a) Food Containing Pork and Part (b) Food and Beverages Containing Alcohol. Labeling for products from non-halal ingredients other than pork and alcohol must include non-halal information in the form of words stating “Ingredient name” with the different color and ingredient composition.

For those food and beverage products that are certified halal, the halal logo of a BPJPH-recognized foreign Halal Certification Body (HCB) may be used on the labeling for compliance. Currently, four U.S. HCBs have applied for BPJPH recognition and are waiting on approval, namely (in alphabetical order): the American Halal Foundation, Halal Transaction Omaha, Islamic Food and Nutrition Council of America (IFANCA), and Islamic Services of America. Although their BPJPH approvals are all still pending, Post has not heard of any of these HCBs having issues with their halal certificates being accepted by Indonesia using recognition from Indonesia’s former halal authority, the Indonesian Council of Ulama (MUI). However, by October 17, 2024 these HCBs must be approved by BPJPH to continue issuing halal certificates that are valid in Indonesia.

Final implementing regulations for the Halal Law are yet to be published, but more information on those that have been published so far can be found in the following FAS Jakarta GAIN reports:

- ID1913: GOI Issues New Implementing Regulation on Halal Product Assurance
- ID2021-0017: Indonesia Halal Overview
- ID2021-0045: Update on Indonesia Halal Regulations

Note: As Indonesia is currently still in the process of issuing final implementing regulations related to the 2014 Law of Halal Product Assurance, exporters are advised to confirm with importing parties any specific requirements related to halal labeling as these requirements and interpretations may change.
h. **Food Irradiation**

Irradiated packaged food must carry the word "IRADIASI" (irradiated) after the name of the food type. The label must include the reason for irradiation and the logo shown below:

![Irradiation Logo](image)

The name and address of the radiation facility, the month and year of the irradiation, and the country in which the process was carried out are also required. If the food cannot be re-irradiated, then the label should include the wording: “TIDAK BOLEH DIRADIASI ULANG” (not to be re-irradiated).

i. **Biotechnology**

BPOM Regulation No. 31/2018 requires “PRODUK REKAYASA GENETIK” (genetically engineered product) wording to be stated in labels of food derived from genetically engineered products. However, product derivatives that have undergone further refining processes to the point where the GE material cannot be identified (to include but not limited to oils, fats, sucrose, and starch) do not need this statement. In addition, the GOI requires labeling only for food products containing more than 5 percent content derived from genetically engineered processes.

j. **Organic Food**

Processed foods that meet Indonesia’s organic processed foods requirements may use the words organic and Indonesia’s organic logo on their labels as below. Domestic and imported organic food must have an organic certificate issued by an Indonesian Organic Certifier or a Foreign Organic Certifier domiciled in Indonesia and accredited by the National Accredited Committee (KAN). Imported organic products are also allowed to have an organic certificate issued by the certifier in the country of origin that is recognized by KAN. Foreign organic logos can be placed next to the Indonesian logo.

![Organic Logo](image)

k. **Food Made from Natural Raw Materials**

Labeling for foods made from natural raw materials can include information that the food is derived from natural ingredients if the relevant natural raw material content is not less than the minimum content set forth in the Indonesian National Standard (SNI).
1. **Health Messages: Sugar, Salt and Fat Content Information in Processed Food and Fast Food**

   Ministry of Health (MOH) Regulation No. 30/2013, amended by Ministry of Health Regulation No. 63/2015, requires producers of processed foods for retail commerce to provide sugar, salt, and fat content information and a health message on the label. As per Ministry of Health Regulation No. 30/2013, health messages on labels should read, “Consuming more than 50 grams of sugar, 2,000 milligrams of sodium, or 67 grams of fat per person per day increases the risk of hypertension, stroke, diabetes, and heart attack.” The regulation was implemented in 2019 and BPOM subsequently issued regulation No. 22/2019 on Nutrition Information Labeling for Processed Food which includes requirements for sugar, salt, and fat content information for processed food products.

---

**SECTION III: PACKAGING AND CONTAINER REGULATIONS**

Indonesia defines food packaging as the material used to contain and/or pack food, whether directly touching the food or not. Indonesia prohibits the use of food retail packaging that uses materials that are prohibited or may release contaminants that are harmful to human health. BPOM Regulation No. 20/2019 lists permitted and prohibited food packaging materials. The list includes active food packages, smart food packages, adhesives, ceramics, Styrofoam, rubber and elastomer, glass, ion exchange resin, metal and metal alloys, paper and cardboard, plastic (e.g. acrylic, PVC, PVA etc.), regenerated cellulose, silicon, fabric, wax, wood, polisher, and coatings.

The Minister of Industry (MOI) issued a regulation on February 12, 2010, requiring all plastic food packaging to include food grade logos and recycling codes. There are no industry regulations or practices applicable to package size. The metric system must be used for weights and measures. The GOI issued a government regulation No. 18/2012 that manages domestic waste. Producers are required to use biodegradable packaging with as little waste as possible and use raw material that can be recycled. Post is unaware of any additional Packaging Sustainability Measures.

For information on the list of permitted packaging for irradiated food; please see the original Indonesian copy of BPOM Regulation No. 3/2018 page 14.

---

4 BPOM Regulation No. 20/2019 page 18
5 Ministry of Industry Regulation No. 24/2010
SECTION IV: FOOD ADDITIVES REGULATIONS

Any person producing food for distribution is prohibited from using any material as food additives which is either prohibited or exceed the maximum threshold limit. The GOI determines the materials which are prohibited and/or permitted in food production or processing activities, as well as the maximum threshold limit.

Ministry of Health (MOH) Regulation No. 033/12 states that food additive production, importation and circulation require a distribution license from the Head of the Indonesian National Agency for Food and Drug Control. Under BPOM Regulation No. 11/2019, there are 26 groups of food additives, and each group has several types of food additives. The list of permitted food additives, except for flavoring category, and maximum limits can be obtained in attachment I & II\(^6\). To use a food additive that is not on the list, a permit must be obtained from the Head of BPOM. BPOM Regulation No. 13/2020 explains the ingredient type, groups and the usage of flavoring additives, including flavoring adjunct. The BPOM Regulation No. 23/2016 regulates the inclusion of “without food additive” on the label and food advertising.

**BPOM Regulation No. 29/2021** sets specifications, including microbial and chemical contamination limits, and labeling for food additive compounds. A food additive product from an animal source must also have a certificate of conformity with Islamic purity, "halal." That certificate is issued by the responsible authority in the country of origin.

SECTION V: PESTICIDES AND OTHER CONTAMINANTS

**Pesticide Residue**

Maximum Residue Limits (MRL) of pesticides and other contaminants in food and fresh agricultural products are generally regulated by Law No. 18/2012 ("The Food Law") under the chapter pertaining to food safety and quality. The implementing regulation of the Food Law, with regards to toxicity, MRLs, prohibited materials for food production processes, and appropriate materials and processes, uses the following regulations:

- PP No. 28/2004 on the safety, quality, and nutrition of food products mandates the Ministry of Agriculture (MOA) and the Ministry of Marine & Fishery Affairs (MOMF) to arrange guidance on “Good Fresh Food Production Practices.”
- MOMF Ministerial Decree No. 02/2007 on “Good Aquaculture Practices” emphasizes that water being used for aquaculture must be free of pesticide, pathogenic microbes, hazardous chemicals, and heavy metal contamination.
- Ministry of Agriculture Regulation No. 55/2016 sets MRLs for pesticides for fresh foods of plant origin (including fruits, vegetables, cereal, and legumes).

---

\(^6\) BPOM Regulation No. 11/2019 page 19 – 39 (List of permitted food additives), page 40 – 1143 (list of maximum limits)
Ministry of Agriculture also issued Joint Decree No. 881/Menkes/SKB/VIII/1996, 711/Kpts/TP.270/8/96 with Ministry of Health on microscopic organism and metal contamination. Regarding pesticide residues, the joint decree states that:

- The maximum allowable residue for products directly or indirectly consumed by humans is as per the appended list.
- Agricultural products circulated in Indonesia, whether locally produced or imported, are not permitted to contain higher levels of pesticide than those in the list.
- Agricultural products imported with greater than the allowed pesticide residue must be rejected.
- Tests for pesticide residue are to be conducted in a laboratory appointed by MOH or MOA.
- The MOH and MOA will monitor and enforce the joint decree according to their tasks and functions.

The list appended to the joint decree includes 218 pesticides and a number of potentially contaminated agricultural products for each pesticide. There is no provision for use of alternative standards; for example, Codex is not listed as a default for pesticides that lack a corresponding Indonesian MRL.

- The National Standard Agency (BSN) issued the SNI 01-6366-2000 regarding Maximum Residue Levels for Microbe and Chemical content in animal-based food.
- The BSN issued the SNI 7313:2008 regarding pesticide Maximum Residue Levels for agricultural products. This SNI regulates MRLs for 196 types of pesticides.
- BPOM issued Regulation No. 7/2018 regarding Raw Materials Prohibited in Processed Foods. This regulation covers information on materials or single/mixture compounds of plant or synthetic origin.

**Microbiological Contamination in Processed Food Products**

- BPOM Regulation No. 13/2019 on MRLs for Microbiological Contamination in Processed Food Products covers the sampling and analysis methods required for certain microbes in certain types of processed food products (except commercially sterile food) for export to Indonesia.
- BPOM Regulation No. 5/2018 on MRLs for Heavy Metal Contaminants in Processed Food covers specific maximum levels for arsenic (As), lead (Pb), mercury (Hg), tin (Sn) and cadmium (Cd) for certain types of processed food products.
- BPOM Regulation No. 8/2018 on Maximum Limit of Chemical Contaminants in Processed Food. This regulation covers the types of processed food and information on specific maximum levels for mycotoxin, dioxin, monochloropropane-1, 2-diol (3-MCPD) and polycyclic aromatic hydrocarbon/PAH.

Please visit the [Legal Documentation and Information Network of the Indonesian Food and Drug Supervisory Agency](http://www.bpom.go.id) for BPOM’s database of regulations in Bahasa Indonesia.

---

7 List of microbiological criteria can be found at [BPOM Regulation No 13/2019](http://www.bpom.go.id) page 9 - 48
SECTION VI: OTHER REQUIREMENTS, REGULATIONS AND REGISTRATION MEASURES

Facility and Product Registration Requirements

Registration of Processed Food

All processed food in retail packaging (both domestically produced and imported) must obtain a registration approval letter prior to distribution. The objective of product registration is to assure that products comply with Indonesia’s safety, quality, nutrition, and labeling regulations. The most recent registration procedures are cited in BPOM Regulation No. 27/2017 (as amended by BPOM No. 07/2021). Registration can be done through an online system. Paper registration can only be done if the online system is inoperable. Under BPOM Regulation No. 27/2017, e-registration is implemented based on the product’s risk level. The risk level is determined by various factors such as target consumers, statement claims, the use food additives, and certain production processes.

Law and Government regulations related to food product registration:

- Law No. 36/2009 on Health
- Law No. 8/1999 on Consumer Protection
- Law No. 18/2012 on Food
- Government Regulation (PP) No. 69/1999 on Food Labeling and Advertising
- Government Regulation (PP) No. 28/2004 on Food Safety, Quality and Nutrition

Exemptions from BPOM product registration are:

- food products produced by in-the-home industries
- food with a maximum room temperature 7-day shelf life
- imports of small quantities for samples (registration), experiments, personal consumption (although this is left to the discretion of customs officials). This exception for small quantities for samples and experiments is based on assessment of the entry permit (SKI) application
- processed food products to be used as raw materials and not for sale directly to retail consumers
- bulk packaged food that is directly sold in front of buyers in small quantities according to consumer demand
- fast food
- food that undergoes only minimal processing (post-harvest) including washing, stripping, drying, grinding, cutting, salting, freezing, mixing, and/or blanching and does not contain food additives (Food additives for winding, waxing or glazing agents are required to be registered with BPOM.)

The registration process is required for products which have identical compositions but do not share similar packaging. A new registration is required for products with different sized retail
packages, different labeling designs, different names and production addresses, and different names and/or addresses of importers and distributors.

All imported processed foods, raw food materials, food additives, processing aids, food ingredients, and others must obtain an entry permit (SKI) from the Head of BPOM for every shipment, or every six months for priority service. SKI applications can be submitted online at https://e-bpom.pom.go.id.

The registration process should be undertaken by a local agent or importer. Typically, it takes longer than the officially reported time frame and costs more than the published rate. Detailed information from the food manufacturer/supplier and product samples are needed for the registration process, which can be sent to the local agent or importer.

Product Registration

There are three registration types: new registrations, variation registrations (changing of data), and renewals (to be conducted between 6 months and 10 days prior to the expiration of the current registration).

Registration Procedures

There are two kinds of registration assessments:

1. General Service/Manual: This registration process is used for specific food products and food additives such as high-risk products or foods with nutritional claims (for example, food for pregnant women, special diet foods, foods for specific health conditions, and food additives and flavorings). Prior to registering the product through Indonesia’s online system, the applicant must provide hard copies of supporting documents, including a letter of appointment (LoA), a free sale certificate (FSC), laboratory test results, product specifications, and raw material specifications. Once approved, the registrant may start the registration process via e-reg. Experience indicates that product registration and obtaining the registration number (ML) will take at least 6 months.

2. Rapid Service/E-reg: the assessment of common/low-risk food products and food additives can be completed through the e-reg system. Obtaining an ML typically takes between 4 and 6 months.

Importers must register the applicable food manufacturer prior to applying for product registration. Food manufacturer registration includes submitting hard copies of their LoA and FSC to BPOM’s Daily Duty Manager. Registration Numbers for facilities are valid for 5 years.

Requirements for imported products

Administrative Requirements

- Importer Registration Number (API), Trade Business License (SIUP) or Registered Importer (IT) for alcoholic beverages and audit results of distribution facilities
• Letter of Appointment/Authorization from company of origin
• GMP/HACCP/ISO 22000 certificate issued by accredited body in the country of origin
• Health Certificate/Free Sale Certificate issued by the competent authority in the country of origin

**Technical Requirements for Determining Risk Level**

• Target consumer
• Information about temperature and time (F0) Commercial Sterile Food which is sterilized after being aseptically packaged or processed
• Information on certain manufacturing processes: organic, irradiation, genetic engineering and product handling
• Information on ionization processes; pasteurized and new technology (non-conventional)
• Information on frozen or chilled storage
• Labeling claims (health, functional nutrition, other functional claims, nutritional content, comparative nutrition claims, etc.)
• The use of food additives which have a determination in the average daily intake/or maximum usage
• The use of certain materials

**Technical Requirements for Risk Assessments**

• An ingredients list, including food additive information
• Production processes
• Shelf-life information
• Production code information
• Label design (in color)
• Product picture showing information on the label
• Certificate of analysis

**Additional Requirements**

• Trademark Certificate (for product with TM and or ® logo on the label)
• Product Certificate of Indonesia National Standard (SNI) (for SNI-mandatory products or products that have SNI logo on the label)
• Organic Certificate (for organic products that display an organic logo on the label)
• Information on GMO (for raw materials: potato, soybean, maize, sugar, and tomato)
  *Note: Product derivatives which have undergone multiple refining processes in high temperature such as fat or oil (including lecithin) do not need a non-GMO statement*
• Information on Food Irradiation (for irradiated products)
• Halal certificate for products displaying the Halal logo on the label
• Other supporting documents
Timeline

The timeline for the issuance of Registration Approval or Refusal based on the type of food is as follows:

Table 1. Indonesia: Timeline for Food Registration Approval in BPOM

Source: BPOM

**Testing**
Based on Regulation No. 28/2004, laboratory testing shall be carried out in government laboratories, or any laboratories accredited by the National Accreditation Committee, or any Accreditation Institutions acknowledged by the National Accreditation Committee. BPOM is authorized to determine the types of processed food that should be tested prior to distribution.

**Certification**
A list of required import documents can be found in the FAIRS Export Certificate Report.

**Other Certification and Testing Requirements**
Importers of processed food products must obtain an import permit before the product is shipped to Indonesia.

The importation of products and processed products of animal origin is regulated by:

a. Ministry of Agriculture Regulation No. 42/2019 regarding The Import of Carcass, Meat, Offal, and/or Its Processed Products (This regulation is not applicable for dairy products); and,

Based on Ministry of Trade Regulation No. 72/2019, the importation of animal or animal origin products into the Indonesian market requires an import approval (SPI – Surat Persetujuan Impor) from the Ministry of Trade and import recommendation (SRP – Surat Rekomendasi Pemasukan) from the Ministry of Agriculture. For processed food products containing milk, meat or other
animal products, an entry permit (SKI – Surat Keterangan Impor) from BPOM is also required, and products in retail packaging must have a registration (ML – Makanan Luar) number from BPOM.

**Remaining processed food products**
An entry permit (SKI) from BPOM is the only permit needed for non-animal or animal origin processed food products, food as raw material, and food additives.

**Entry Permit (SKI)**
BPOM Regulations No. 30/2017 (as amended by BPOM No. 15/2020) and No. 29/2017 (as amended by BPOM No. 14/2020) require importers to obtain an entry permit (SKI) for each shipment in order to release the products at customs. BPOM also provides a priority service for the issuance of SKI with a maximum process approval time of 10 days. Priority service is given to importers with good track records that have obtained approval five times for new SKI registrations without any additional or incomplete documents. The imported products must have at least two-thirds of shelf life remaining at the time of import.

To obtain a permit, an importer must provide the following data and documents:

1. An application letter for the raw material, food additive, food product import, including the following information:
   - Name and address of importer
   - Brand name and kind of products
   - Packaging type/weight/volume
   - Amount of imported product
   - Country of origin
   - Name and address of supplier
   - Number and date of invoice
   - Number and date of Bill of Lading (B/L) or Airway Bill (AWB)
   - Expiration date
   - Lot Number/Batch Number/Production code
   - Flavor & Extracts Manufacturers Association (FEMA)/The Joint FAO/WHO Expert Committee on Food Additives (JECFA)/Enzyme Commission (EC) Number (for food additive/flavor)
   - Port of destination

2. Product Specifications for the raw materials, food additives, food product imports
   - Description/composition/ingredient
   - Physical characteristic
   - Chemical characteristic
   - Microbiological characteristic
   - Packaging
   - Utilization/application
   - Storage, term of expiration date
3. IDR 6,000 stamped Declaration Letter for food raw material and food additives, declaring that:
   - Product is not intended for retail sale
   - Applicant is willing to have the sample tested in an accredited laboratory at the applicant’s expenses

4. Certificates (please see below)

5. Payment bank receipt for non-tax revenue (PNBP)

Figure 2. Indonesia: Flow Chart of SKI Application in BPOM
Dairy Products

Regulation of the Ministry of Agriculture No. 15/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration of the Agricultural Sector requires the approval of a foreign dairy establishment by the Minister of Agriculture before it can export to Indonesia. The approval application must be submitted by the establishment through the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Jakarta. Post has issued a GAIN report regarding the regulation changes in dairy imports and dairy establishment approval process, which also attach a guide to obtain dairy establishment approval.

Approved dairy establishments are listed on the Directorate General for Livestock and Animal Health Services (DGLAHS)’ website and online import recommendation (SIMREK) lists. A dairy establishment can begin exporting its products to Indonesia only after it has been officially listed on both lists. As of December 2021, there are 120 U.S. dairy establishments approved to export to Indonesia.
• Imports of dairy products to Indonesia require import permits issued by the Ministry of Trade.
• Import permits require an import recommendation from the Ministry of Agriculture.
• Halal certificates for halal-required products, issued by a halal certifying body recognized by the Indonesian halal authority, is one of the most important requirements to obtain an import recommendation.
• An import recommendation shall be valid for six months and should be used to obtain an import permit from the Ministry of Trade within the six months period.
• The import recommendation number must be included on the health certificate accompanying a shipment of dairy products.
• An import permit shall be valid for one fiscal year (based on Ministry of Trade Regulation No. 20/2021 regarding Import Policy and Arrangement).
• A list of dairy products eligible for export to Indonesia is included in the Annex of Regulation No. 15/2021 (unofficial English translation).
• Raw materials for dairy products intended for export to Indonesia must not be sourced from countries and business units that have not been approved by the Ministry of Agriculture.

**Fresh Fruit and Vegetable**

In 2020, the Ministry of Agriculture issued regulation No. 02/2020 to replace regulation No. 39/2019 on horticulture imports. The new regulation states that GAP, GHP or a letter from the exporter stating the production capacity of their farm are no longer required for issuance of Import Recommendations (IR) from countries with Fresh Foods of Plant Origin (FFPO) food safety recognition.

Importers can present an IR request at any time, and requests for the current year can be filed during the previous year's November with the current year IR still valid until December 31, so long as product has been loaded on board the vessel in the country of origin and arrives to Indonesia within 60 days from December 31. The regulation covers 29 fresh horticulture commodities.

The Ministry of Trade is responsible for issuing import permits and specifying quantities permitted for import based on an MOT estimate of the importer’s cold storage capacity. Ministry of Trade Regulation No. 44/2019, which replaced regulation No. 64/2018, states cold storage capacity will continue to be used as a benchmark for the quantity permitted for import. The proof of control (previously: ownership) of refrigerated warehouse (cold storage) requirement applies specifically to general importers. Importer-producers will maintain the right to rent cold storage in order to increase import volumes.

**Recognition of the U.S. Food Safety Control System for Fresh Foods of Plant Origin (FFPO/PSAT)**

The GOI has recognized the United States’ Food Safety Control System for the Fresh Food of Plant Origin (FFPO). Ministry of Agriculture Regulation No. 55/2016 requires products imported from FFPO-recognized countries to submit “prior notice” notification on-line (See Prior Notice section below). Products from unrecognized countries must provide prior notice and a certificate of analysis (COA) from a recognized laboratory. The Head of the Indonesian Agricultural Quarantine Agency (IAQA) issued the initial recognition of U.S. FFPO through an MOA decree following onsite verification in October 2009. The decree has most recently been renewed in December 2020, for an additional three years. The 88 plant products currently recognized by the GOI equivalence recognition (as per MOA Decree No. 771/KPTS/KR.050/M/12/2020) are as follows:

| 3. Apple        |                | 63. Parsley    |
| 4. Apricot      | 33. Squash     | 64. Celery     |
| 5. Blackberries | 34. Strawberry | 65. Tomato     |
| 8. Boysenberry  | 37. Onion      | 68. Carrot     |
| 10. Cranberry   | 39. Garlic     | 70. Rice; Rice Husked and Rice Polished |
| 11. Citrus Fruit| 40. Spinach    |               |
| 13. Dewberries  | 42. Sugar Beet | 72. Maize     |
| 14. Gooseberry  | 43. Broccoli   | 73. Oats       |
| 15. Grapefruit  | 44. Cauliflower| 74. Rye        |
| 16. Oranges     | 45. Pepper Chili; Dried Pepper Chili | 75. Almond Nut |
| 17. Longan      | 46. Chicory    | 76. Hazelnuts  |
| 18. Raisin      | 47. Leeks      | 77. Macadamia Nuts |
| 21. Limes       | 50. Sweet Corn | 80. Peanuts   |
| 22. Mandarin    | 51. Mushrooms  | 81. Pecan     |
| 23. Melon       | 52. Potatoes   | 82. Mung Bean |
| 26. Peach       | 55. Cabbage    | 85. Peas      |
| 27. Persimmon   | 56. Brussels Sprouts | 86. Coffee Beans |
| 28. Pear        | 57. Lima Bean  | 87. Pepper Black, White |
| 29. Plum        | 58. Radish     |               |
| 30. Shaddock or Pomelos | 59. Turnips | 88. Green Tea and Black Tea |

60. Cucumber
Phytosanitary Certificate and Destination Port
On June 13, 2012 Ministry of Agriculture issued regulation No. 42/2012 that replaced Ministry of Agriculture Regulation No. 37/Kpts/HK.060/1/2006 on plant quarantine measures for the importation of fresh fruits and vegetables. The purpose of this rule is to ensure that imported fresh fruits and vegetables are free from fruit flies. A plant phytosanitary certificate from the country of origin or country of transit and entry through the specified four ports is mandatory (Port of Belawan - Medan, Port of Tanjung Perak - Surabaya, Port of Soekarno-Hatta – Makassar, Port of Tanjung Priok - Jakarta, and Soekarno-Hatta airport-Jakarta).

Importation of fresh fruits and vegetables originating from pest-free producing areas must be declared in the Additional Declaration section of the plant phytosanitary certificate that accompanies the shipment. Importation from non-pest-free producing areas must be treated with one of the following treatments: cold treatment with temperature appropriate for fresh fruit and vegetables and for the prevention of the appropriate pest; fumigation; Vapor Heat Treatment (VHT); or irradiation. The treatment must be declared in the treatment column of the phytosanitary certificate. Similar to the provision in Ministry of Agriculture Regulation No. 42/2012, imported fresh bulb is regulated by Ministry of Agriculture Regulation No. 43/2012 and its amendment, Ministry of Agriculture Regulation No. 20/2017.

On June 22, 2015, the Head of IAQA released decree No. 756/KPTS/OT.140/L/06/2015 establishing California as a pest-free area for 9 pest fruit flies in the United Sates: Ceratitis capitata; Anastrpha fraterculus; Anastrepha ludens; Anastrepha obliqua; Anastrepha serpentine; Anastrepha suspensa; Rhagoletis cingulata; Rhagoletis fausta; and Rhagoletis pamonella. As a result, major fresh fruit exports from California do not need a pre-treatment. The decree replaces previous decree 348/Kpts/PD.540.220/12/06 on establishing California as a free area for Ceratitis capitata.

Prior Notice
Prior notice for fresh fruit and vegetable imports must indicate the date & place of loading, date & place of arrival/destination, type of transportation, product name, quantity imported, country of origin, packing unit, import purpose, and container’s identification number. The exporter must submit this online prior notice before the arrival of the consignment. Prior notice is explained in Ministry of Agriculture Regulation No. 55/2016 (Format-1).

Fresh Fruit Registration
On January 8, 2019 Ministry of Agriculture issued new regulation No. 53/2018 on Safety and Quality of Fresh Food of Plant Origin (FFPO), under this regulation the importer is required to register their fresh fruit products with Food Safety Agency, MOA.
Meat and Poultry Products

Minister of Agriculture Regulation No. 15/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration of the Agricultural Sector requires MOA approval of a foreign meat processing establishment before it can export to Indonesia. U.S. establishments should submit approval applications through the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Jakarta. Post has issued a GAIN report regarding the changes to regulations on meat imports and on the approval process for meat processing establishments, which also includes a guide to obtaining meat and pork processing establishment approval.

Approved foreign meat processing establishments are listed on the DGLAHS’ website and online import recommendation (SIMREK) lists. A meat processing establishment can begin exporting its products to Indonesia only after it has been officially listed on both lists. As of December 2021, there are 22 U.S. beef processing establishments, nine U.S. pork processing establishments, and one U.S. lamb processing establishment approved to export to Indonesia.

- Imports of meat products to Indonesia require import permits issued by the Ministry of Trade.
- Import permits require an import recommendation from the Ministry of Agriculture.
- Halal certificates for halal-required products, issued by a halal certifying body recognized by the Indonesian halal authority, is one of the most important requirements to obtain an import recommendation. An import recommendation can be applied for at any time and shall be valid for six months. It should be used to obtain an import permit from the Ministry of Trade within three months after its issuance.
- The import recommendation number must be included in the Health Certificate (FSIS form 9060-5) accompanying the shipment of meat products.
- An import permit shall be valid for one fiscal year (based on Ministry of Trade Regulation No. 20/2021 regarding Import Policy and Arrangement).
- A list of meat products eligible for export to Indonesia is included in the Annex of Regulation No. 15/2021 (unofficial English translation).
- The importation of meat and meat products samples for exhibition purposes is allowed (up to 200 kilograms).
- Importers must indicate the products being imported and their market destination (restaurant, hotel, catering, industry, retail, etc.) in their import recommendation application to the DGLAHS.

Note: Currently Indonesia is drafting a new Presidential Regulation that will base the determination of import license issuance on Commodity Balances and will eliminate the requirement of an import recommendation from the MOA. Although this information has not been officially published, according to GOI contacts and importers, in 2022 commodity balances

9 http://www.halalmui.org/mui14/main/page/list-of-halal-certification-bodies
will be determined for five commodities (sugar, rice, fisheries products, meat, and salt). Beef importers informed Post that they have submitted need proposals for 2022 as one of the requirements to apply for 2022 import licenses that will be valid for one year.

**Pet Foods**

Ministry of Agriculture Regulation No. 15/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration of the Agricultural Sector requires MOA approval of a foreign pet food processing establishment before it can export to Indonesia. U.S. establishments should submit approval applications through the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service (FAS) in Jakarta.

Pet food processing establishments must be approved by the Ministry of Agriculture through an animal health and veterinary public health risk analysis assessment process, which consists of a document desk review, onsite audit, and evaluation. Each approval step is subject to an approval fee in accordance with Government Regulation No. 35/2016. U.S. pet food processing establishments wishing to export to Indonesia are encouraged to contact the Office of Agricultural Affairs of the USDA/FAS in Jakarta [AgJakarta@usda.gov](mailto:AgJakarta@usda.gov) for guidance. As of December 2021, there are [56 U.S. pet food establishments](http://www.halalmui.org/mui14/main/page/list-of-halal-certification-bodies) approved by the Ministry of Agriculture.

- Imports of pet food to Indonesia require import permits issued by the Ministry of Trade.
- Import permits require an import recommendation from the Ministry of Agriculture.
- Halal certificates for halal-required products, including pet food, issued by a halal certifying body recognized by the Indonesian halal authority, is one of the most important requirements to obtain an import recommendation[^10].
- An import recommendation must be used to obtain an import permit from the Ministry of Trade within three months of its issuance.
- The import recommendation number must be included on the health certificate accompanying a shipment of petfood.
- An import permit shall be valid for one fiscal year (based on Ministry of Trade Regulation No. 20/2021 regarding Import Policy and Arrangement).
- Raw materials for pet foods intended for export to Indonesia must not be sourced from countries and business units that have not been approved by the Ministry of Agriculture.

**Rendered Products**

Ministry of Agriculture Regulation No. 15/2021 regarding the Business and Product Standards for Risk-based Business Licensing Administration of the Agricultural Sector requires MOA approval of a foreign rendering establishment before it can export to Indonesia. U.S. establishments should submit approval applications through the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service (FAS) in Jakarta.

Rendering establishments must be approved by the Ministry of Agriculture through animal health and VPH risk analysis assessment process, which consists of a document desk review, onsite audit, and evaluation. Each approval step is subject to an approval fee in accordance with Government Regulation No. 35/2016. Rendering establishments wishing to export to Indonesia are encouraged to contact the Office of Agricultural Affairs of the USDA/FAS in Jakarta at AgJakarta@usda.gov for guidance. As of December 2021, there are 32 U.S. rendering establishments approved by the Ministry of Agriculture.

- Only rendered products of ruminant and poultry origin may be imported into Indonesia. (The DGLAHS will perform a product purity test.)
- Raw materials of rendered products intended for export to Indonesia must not originate from porcine sources, dead animals, wildlife, or animals originating from other countries.
- Import permits for rendered products are issued by the MOA, can be applied for at any time, and are valid for 4 months.
- Approved rendering establishments are subject to bi-annual, physical onsite audits.

Rice

On January 3, 2018, the Ministry of Trade (MOT) issued Regulation No. 1/2018 replacing Ministry of Trade Regulation No. 103/2015. The new regulation no longer specifically mentions restrictions of rice imports one month prior to, during, and two months after the main harvest period. However, the import period may be determined during the inter-ministerial coordination meeting held prior to any import decision. The new regulation continues to allow only Indonesia's state-owned logistics board and food procurement agency (BULOG) to import medium quality rice (maximum of 25 percent broken grains), while allowing private companies to import specialty rice (e.g., jasmine rice, basmati rice, sushi rice, rice for diabetics, and rice seed).

On December 8, 2015, the Ministry of Trade stipulated in Regulation No. 103/2015 that japonica rice (HS. 1006.30.99.00) is permitted for import into Indonesia. However, in order to import japonica rice, an import recommendation issued by the MOA must be obtained. The MOA has continuously refused to issue import recommendations for japonica rice, claiming that it can be substituted with similar Indonesian varieties.

Imports of rice are permitted when required as raw material for industry. This is only permitted when the rice cannot be produced domestically. Imported rice can only be used as raw material for food manufacturing and cannot be sold to other parties. Imports are limited to 100 percent broken rice, 100 percent broken glutinous rice, maximum 5 percent broken japonica rice, rice flour, whole grain glutinous rice, maximum 5 percent broken Hom Mali rice, maximum 5 percent broken Jasmine rice, maximum 5 percent broken Basmati rice, and other 5 percent broken rice. Only private importers possessing a “Producer Importer Recognition” (API-P) issued by the MOT may import rice for further food processing. Rice not intended for further
processing may be imported only by GOI state-owned companies. Imports require the Producer Importer of Rice to obtain import approval from the MOT. Import permits are valid for six months or until December 31, whichever comes first.

Additionally, imported rice must be packaged and labeled in Bahasa Indonesia prior to arrival in Indonesia. Packaging that comes into direct contact with food must be made of food grade material in accordance with Indonesian regulations. Packaging made of plastic is required to include a Food Grade logo and Recycling Code in accordance with Indonesian regulations. Compliance with packaging requirements must be proven by:

a. Certificate of test results issued by a competent testing laboratory and recognized by the local government; or

b. Letter of statement from importer stating that the packaging used is in accordance with provisions of Indonesian regulations by including Food Grade Logo and Recycling Code on the packaging.

For Thai Hom Mali, Basmati, Japonica, and Steam Rice, packaging size is required to be at maximum 10 kg per bag.

On February 12, 2019, the Ministry of Trade issued regulation No. 8/2019 on Rice Labeling which states that any rice packers or importers selling rice in less than 50 kg bags must include a label in Bahasa Indonesia on each bag that contains the following information:

a. Rice brand
b. Quality type of the rice (e.g., medium rice, premium rice, or specialty rice)
c. Net weight in kilograms or grams
d. Packaging date
e. Name and address of the rice packers or importers

Seeds

In July 2019, the Ministry of Agriculture issued regulation No. 38/2019 regarding the procedures for seed testing, assessment, variety release, and withdrawals, to replace Ministry of Agriculture Regulations No. 61/2011 and No. 40/2017. Based on this regulation, to import a new hybrid seed variety, either genetically engineered (GE) or conventional, the importer must provide a guarantee letter stating that the F1 hybrid seed will be produced in Indonesia within two years after the date of release. In the case of F1 hybrid paddy seed, they must guarantee that the seed will be produced in Indonesia within three years after the release. Meanwhile, the F1 estate crops hybrid seed will be produced in Indonesia within three years for seasonal crops and six years for annual crops after the release. However, Ministry of Agriculture Regulation No. 15/2021 regarding the Standard of Business Activity and Standard of Product in the Implementation of Risk-based Business Licensing in the Agricultural Sector, has removed the point on importing F1 hybrid food crop seeds, which means seeds for F1 food crops must be produced locally.
Indonesian import procedures for horticulture seeds are mainly regulated based on Ministry of Agriculture Regulation No. 15/2017 as amended by Ministry of Agriculture Regulation No. 17/2018 and No. 26/2018. This regulation covers import and export licenses, and states that seed imports can be conducted by business units, government institutions, plant observers, or individuals. MOA approval is required for all seed imports. For information on requirements for seed introduction/importation into Indonesia, please see attachment pages 19 & 20/Form IF-01. For technical information on exporting commodities to Indonesia, please see page 9/Form - IF 02.

<table>
<thead>
<tr>
<th>Importation of Seed for Purpose of:</th>
<th>Technical Requirements:</th>
</tr>
</thead>
</table>
| a. Registering horticultural varieties for circulation | 1. The variety must have quality advantage, uniqueness, and specific uses.  
2. The requested seed volume is limited according to the seed release preparation.  
3. Must have a Summary of design for adaptation test, observation, or the planned need of seed for the truth of horticultural variety test. |
| b. Procuring quality seeds for commercial purposes | 1. The variety has been registered for circulation (not more than 2 years since its registration).  
2. Must meet the quality standards or minimum technical requirements.  
3. Local supply is not sufficient.  
4. The variety is not locally produced.  
5. The requested seed volume and type is limited according to the need of procuring implementation of quality seeds.  
6. Seeds must be produced overseas.  
7. “Seeds” must be stated clearly on the packaging in Bahasa Indonesia. |
| c. Procuring parent stocks for the multiplication of seeds from registered varieties | 1. These parent stocks are not available in Indonesia.  
2. Seed description must be signed by the seed breeder.  
3. The volume of the requested seed is in accordance with the seed production plan. |
| d. Seed development for export purposes | 1. Must have seed development/multiplication plan.  
2. The requested seed volume is in accordance with the availability of land for seed multiplication.  
3. Recommendation from local provincial authority.  
4. Recommendation from the National Seed Association. |
| e. Producing fresh product and/or processed industrial raw materials for domestic and overseas markets | 1. Must have plantation development plan.  
2. The requested seed volume is in accordance with the availability of land for multiplication plantations.  
3. Recommendation from local province authority, or regency.  
|---|---|
| f. Implementing benchmarking tests between laboratories, proficiency test, or validation method in the framework of accrediting seed quality laboratories | 1. The requested seed volume and type is based on testing needs.  
2. Valid participation letter for the benchmarking test between labs or proficiency test or statement letter of proficiency test from International Seed Testing Association (ISTA).  
3. Statement letter on organizing proficiency test, benchmarking test between labs, or validation methods.  
4. After the test is completed, the remaining seeds, including seeds and sprouts resulting from seeds of the proficiency test as well as growing media which is used in the test must be destroyed. |
| g. Implementing new, unique, uniform, and stable test (BUSS) for the need of plant variety protection | The requested seed volume and type is in accordance with testing needs and supported by a testing plan proposal. |
| h. Meeting needs of plant observer | 1. The requested seed volume is maximum:  
   a. 10 plants, consisting of some type/variety, or  
   b. 5 media, which contain a maximum of 25 plantlets, cuttings, or young plant/media, or  
   c. 100 items per commodity for reference seed collection.  
2. Plantation location plan (except for reference seed collections). |
| i. Exhibiting/promoting contest materials | 1. Submission of the invitation as exhibitor/participant from the event organizer.  
2. The seed type and volume are in accordance with the needs of the exhibition/promotion/contest.  
3. After the activity is done, the seed must be destroyed by quarantine officer. |
| j. Implementing quality test necessary for issuing orange and blue certificates based on the regulations of the International Seed Testing Association (ISTA) | 1. The requested seed volume and type is in accordance with testing needs and supported by a testing plan proposal.  
2. Letter of application for issuing orange and blue certificates.  
3. Application for seed sampling for testing purposes.  
4. All remaining seed samples must be destroyed within one /of testing. |
The Decree of the Head of the Agricultural Quarantine Agency No. 152/Kpts/PD.540/L/8/2003 states that seed imports must:

- be accompanied by a phytosanitary certificate from the country of origin and transit country,
- pass through the designated entrance point,
- be reported and delivered to Plant Quarantine Officials at the entrance point for quarantine treatments,
- be accompanied by an Import License from the Ministry of Agriculture or appointed officials,

N.B: Quarantine officials will ask for the original copies of the phytosanitary certificate, import license, copies of invoices, packing list, and airway bill or bill of lading.

Although no Indonesian quarantine laboratory has been accredited by the International Seed Testing Association (ISTA), the Ministry of Agriculture refers to the International Standard for Phytosanitary Measures from the United Nations Food and Agriculture Organization (UN FAO) for quarantine inspections and actions.

**Sugar**

On February 17, 2020, the Ministry of Trade issued Regulation No. 14/2020, providing more flexibility on sugar specifications. The regulation defines sugar specifications that are allowed for or banned from import as follows:

**Table 4. Ministry of Trade Regulation on Sugar Imports**

Source: Ministry of Trade Regulation No. 14/2020

Imported raw sugar must only be used as raw material for refineries to produce white sugar for consumption, while refined sugar may only be imported as raw material for the food and beverages industry. Only importers who hold general importer-producer identification numbers (Angka Pengenal Importir-Produser, API-P) can import raw or refined sugar. Prior to import, the API-P importer must obtain an import recommendation from the Ministry of Industry as a requirement to obtain an import permit from Ministry of Trade. Import permits for the import of raw sugar and refined sugar are valid for a maximum period of six months from the issuance date.

White sugar can only be imported to build up national stocks and stabilize prices. Only state-owned companies and API-P importers can import white sugar upon authorization from the government. In addition to receiving an import recommendation from the Ministry of Industry, white sugar importers must obtain an import recommendation from the Ministry of State-Owned Companies and the Ministry of Agriculture to obtain an import permit from the Ministry of Trade. Import permits for white sugar are valid for a maximum period of one /from the issuance date.

The intention of Ministry of Trade Regulation No. 14/2020 was to simplify sugar import procedures and to improve the competitiveness of Indonesia’s sugar industry. This regulation revokes and invalidates Ministry of Trade Regulation No. 117/M-DAG/PER/12/2015.

Seafood

The Director General of Fishery Product Processing and Marketing (P2HP) issued Decree No. 125/KEP-DJP2HP/2014, later amended by decree No. 31/KEP-DJP2HP/2015, listing fish products allowed for export to Indonesia. The Decree states that Indonesia will only import fish species not available in Indonesian waters, except in the event of shortages and seasonal production limitations. Indonesia’s Ministry of Marine Affairs and Fisheries (MOMAF) also issued new regulations on imports of fish and fishery products: Ministry of Marine Affairs and Fisheries Regulation No. 11/2019 (original Bahasa Indonesia version). Ministry of Marine Affairs and Fisheries Regulation No. 74/2016 (replacing Ministry of Marine Affairs and
Fisheries Regulation No. 46/2014) specifies required sanitary certificate language and Ministry of Marine Affairs and Fisheries Regulation No. 41/2014 lists live aquatic species banned from import.

2. The following documents are required from the Exporter:

   a. Health certificate issued by the competent authority of the country of origin (A bilingual English-Indonesian sample health certificate can be found here: Ministry of Marine Affairs and Fisheries Regulation No. 11/2019, page 34.
   b. Catch certificate
   c. Certificate of Origin (COO)

Every shipment is subject to quarantine measures/inspections upon arrival; therefore, the importer should at least one day prior to arrival obtain a Fish Quarantine Installation Certificate that can be used to request fish quarantine measures\textsuperscript{14}. The importer should submit the required documents to the quarantine officer at the entry point, including Import Permit, Health Certificate, COO, Catch Certificate, and Invoice/Packing List. When the shipment arrives, the fish quarantine officer will verify administrative requirements, conduct a physical inspection, and take samples for laboratory examination to ensure the quality and safety of the fishery product. A list of test parameters in Bahasa Indonesia can be found at Head of Fish Quarantine Decree No. 77/2017, (Frozen Fish, page 22 – 23); (Fresh Fish page 24); (Frozen Shrimp page 28); (Scallop page 30); (Frozen Shellfish Meat page 31); (Frozen Lobster page 32).

\textsuperscript{14} Regulation of Ministry of Marine Affairs and Fisheries No. 18/2018
SECTION VII: OTHER SPECIFIC STANDARDS

Food Categorization
BPOM Regulation No. 34/2019 (replacing BPOM Regulation No. 21/2016) covers food categories. The food categorization regulation sets guidelines for setting standards, assessments, inspections, and certifications for food safety controls. Domestic and imported food products sold in retail packaging must comply with the provisions on food categories outlined in BPOM Regulation No. 34/2019. There are 16 food categories stated in attachments I to XVI. If a type of food does not fall under one of the foods categories listed, written approval is required from the head of BPOM.

Alcoholic Beverages (Beer, Wine, Spirits)
The distribution and sale of alcoholic beverages are controlled by the GOI. There are three categories of alcoholic beverages: “Category A” contains zero to five percent alcohol; “Category B” contains greater than 5 percent and less than 20 percent alcohol; and “Category C” contains 21 to 55 percent alcohol.

An importer of alcoholic beverages must hold an imported-alcoholic beverage permit (IT-MB) from MOT. The main requirement for the IT-MB application is an appointment letter authorized in the country of origin by a Public Notary and an Indonesian Commercial Attaché (for the United States, at the Indonesian Embassy in Washington D.C. or one of the consulates.) The application must indicate 20 foreign brands/manufacturers from at least 5 countries, be able to purchase a minimum of 3,000 cartons/brand//and have distributors in at least six provinces (Ministry of Trade Regulation No. 20/2014, which was replaced by Ministry of Trade Regulation No. 25/2019). The IT-MB is valid for three years and can be extended.

The type and amount of the imported alcoholic beverage products allocated to fulfill national demand is determined by the MOT and issued in April annually. The ports of entry for imported duty-paid alcoholic beverages include the Belawan Seaport, Medan; Tanjung Priok Seaport, Jakarta; Tanjung Emas Seaport, Semarang; Tanjung Perak Seaport, Surabaya; Bitung Seaport, Manado; and Soekarno Hatta Seaport, Makassar. They can also enter via all Indonesian international airports.

The distribution and sale of alcoholic beverages under category B and C fall under the GOI’s control. Direct sales are only allowed for duty-paid alcoholic beverages (including categories A, B, and C) for on-site consumption at hotels, restaurants, bars, pubs, and night clubs. Duty-free shops can sell duty-free alcoholic beverages, including categories A, B, and C in certain locations. New Ministry of Trade Regulation No. 6/2015 prohibits sales of category A alcoholic beverages in minimarkets and other retail shops. Supermarket and hypermarket retail sales of alcohol are still allowed. Direct selling and/or retail of alcoholic beverages and alcoholic beverage products to people under the age of 21 years is prohibited in Indonesia.
BPOM Regulation No. 05/2021 states that alcoholic beverages distributed in Indonesia must comply with food safety and quality standards on methanol content, metal and chemical contamination, and food additives. Maximum methanol content is less than 0.01% b/v (calculated based on product volume). Alcoholic beverages are not allowed to be advertised in the media. Prior to distribution, imported alcoholic beverages must be registered at BPOM with the required documents as follows:

- An exclusive Letter of Appointment authorized in the country of origin by a Public Notary or Chamber of Commerce or Indonesian Embassy
- Certificate of Free Sale and HACCP/ISO 220000/GMP/Food Safety
- Production flow chart; ingredients; label design; front and black label; batch code/lot number/production code; packaging type.
- Product samples for laboratory testing at BPOM

On December 12, 2018, the Ministry of Finance (MOF) issued Regulation No. 158/2018 to replace MOF Regulation No. 207/2013, imposing a new excise tax on ethyl alcohol, beverages, and concentrates containing ethyl alcohol. The regulation was implemented on January 1, 2019. The new tax is described in Table 6.

On January 27, 2017, the Ministry of Finance issued Regulation No. 6/2017 which revised the import duty at the ad valorem tariff rate of 90 percent for wine, cider, perry, and mead, and 150 percent for spirits and liqueurs.

Biotechnology
The Government Regulation No. 28/2004 states that Genetically Engineered (GE) food must be tested prior to distribution. BPOM regulation No. 6/2018 concerning Food Surveillance on Genetically Engineered Food replaced BPOM Regulations No. 19/2016 and No. HK.03.1.23.03.12.1563/2012 on the Guidelines for Food Safety Assessments of Genetically Engineered products. An assessment for imported GE products is required before distribution in Indonesia, which includes:

a. genetic information, including general description, host description, etc.;
b. donor organism;
c. genetic modification description;
d. genetic modification characteristics; and
e. food safety information, including substantial equivalence, changes in nutritional value, allergenicity, and toxicity.

BPOM Regulation No. 6/2018 was put in place to address the following:
1. Imported GE products must obtain approval from BPOM in the form of GE Food Safety Certificate after the assessment is done.
2. After obtaining a food safety certificate, the importers must convey:
   - a sample of the GE product and its conventional counterpart
   - a document indicating primary sequence information, a validated detection method, and a location where Certified Reference Materials can be obtained.
3. GE processing aids not containing GE DNA or GE proteins are exempt from food safety assessment by the Biosafety Commission for Genetically Engineered Products (BCGEP).
4. BPOM requires applicants to submit samples of GE products and their conventional counterparts or their parent seed no later than six months after receiving distribution approval. GE products that have been distributed prior to the enactment of this regulation must comply no later than May 2019.
5. If the importer submits an application of assessment for an imported GE product, the data submitted should be in the form of testing results that must be carried out by an accredited laboratory, or an overseas laboratory that implements the Good/GLP Laboratory Method, or a laboratory that has a Mutual Recognition Arrangement (MRA) agreement.

For additional information, please see the Agricultural Biotechnology Annual Report 2021.

Special Nutrition
BPOM issued Regulation No. 1/2018, which has been amended by BPOM No. 24/2019 and BPOM No. 24/2020, regarding the Surveillance of Processed Foods for Special Nutrition Needs (PKGK). This regulation oversees processed foods for special dietary and medical needs,
including foods and beverages providing tailored nutrition for adults, infants, children, pregnant mothers, and athletes\textsuperscript{15}. This regulation also defines PGKG and provides requirements on the standard and quality of each food category (including requirements for materials, nutritional content, food additives, and labeling).

Imports of PKGK products must be accompanied by a certificate proving the product is in compliance with good manufacturing practices for processed foods (CPPOB). The certificate must be issued by the competent authority in the country of origin that has a Mutual Recognition Agreement with GOI.

**Halal Certificate**

According to Law No. 33/2014 on Halal Product Assurance, a new agency under the umbrella of the Ministry of Religious Affairs (MORA), called the Halal Product Assurance Organizing Agency (BPJPH) is charged with overseeing the collection of fees and issuance of halal certificates for specific products. Law No. 33/2014 came into force on October 17, 2019, beginning a five-/grace period for all food and beverage products to come into compliance by the October 17, 2024 deadline. (Mandatory halal certification for all other products began on October 17, 2021, with grace periods extending between 5 to 15 years, depending on product category.)

Under this law, the Indonesian Council of Ulama (MUI) retains responsibility for determining whether something is halal or not and for issuing halal fatwas accordingly. Under Law 33/2014, halal certification is mandatory for all food and beverages (including products derived through genetically engineering process), pharmaceuticals, cosmetics, biological products, and chemical products sold in Indonesia, unless the products are non-halal. All business processes, including production, storage, packaging, distribution, and marketing will be required to comply with this law, which also requires non-halal information to be placed on packaging for all non-halal products. [Ministry of Religious Affairs Decree No. 748/2021](https://example.com) (English version) lists the product types that are required to be halal certified.

**Irradiation Certificates**

All imported irradiated food should be accompanied by a certificate issued by authorized officers in the country of origin that is valid for the batch. It is also required to fulfil the requirements of safety, quality, nutrition, and label and food advertisement.

Regulation on Irradiated Food refers to Ministry of Health Regulation No. 701/Menkes/Per/VIII/2009 and BPOM Regulation No. 3/2018.

\textsuperscript{15} Under this amendment regulation, BPOM added snack for children into category of processed food of special dietary
Based on the above regulation, there are three GOI-approved sources of radiation treatment:

1. Gamma irradiation with Co\textsuperscript{60} or Cs\textsuperscript{137} isotopes
2. X-ray with energy less than and equal to 7.5 MeV or
3. Electron machine with energy less than or equal to 10 MeV

The following are the types of foods that can be irradiated and their respective doses.

**Table 7. Indonesia: Type of Food Allowed to Be Radiated**

</tbody>
</table>

**Product Shelf Life**

BPOM Regulation No. 15/2020 requires that imported processed food products have at least two-thirds of shelf life remaining at the time of import.

**Processed Organic Food**

Organic processed food shall include food from organic fresh food processed by a specific method, with or without permitted food additives.

Based on Ministry of Agriculture Regulation No. 64/2013, imported organic food must be accompanied by:

- Transaction certificate issued by the Organic Certification Institute (LSO) that has been certified by the National Accreditation Committee (KAN) whether it is a domestic LSO
or foreign LSO domiciled in Indonesia. The LSO must perform certification of the business unit in the country of origin.

- A health certificate or certificate of sale issued by an authorized institution in the country of origin.

The 2008 BPOM regulation (replaced by BPOM Regulation No. 1/2017) stated that organic fresh foods must contain at least 95% organic fresh food from the total volume or weight, excluding water and salt content. Water and salt content are water and salt added at the time of processing. Food additives and other materials permitted in organic processed foods are attached to the regulation. Raw materials, food additives, other materials, and organic processed foods cannot be treated with irradiation and cannot be derived from genetically engineered products.

**Semi Processed Plant Products – Plant Quarantine Pest Carrier**

The MOA requires a Phytosanitary Certificate (PC) to accompany the importation of semi processed plant products through Regulation No. 9/2009 on Requirements and Procedures of Plant Quarantine for the Importation of Plant Quarantine Pest Carriers. There are 12 carrier media in the form of semi processed plant products -as listed below- which can carry plant quarantine pests.

The regulation also states that if the PC cannot be issued by the competent authority of the country of origin, then quarantine action will be carried out on the carrier media, which is in the form of a plant that has undergone minimal processing (semi-processed plant products). The MOA will only consider PCs issued within 90 days. The MOA can also consider allowing importation without a PC if the country of origin can provide them with a strong justification.

**Indonesian National Standards (SNI)**

The Government of Indonesia requires several food products to comply with SNI requirements. To prove compliance, the product must have an SNI mark (SPPT-SNI) affixed on the product label for retail packages or included on the SNI certificate for bulk products.

The following are SNI mandatory products\(^{16}\):

<table>

</table>

In order to obtain an SNI for imported products, an importer must fulfil several requirements, including obtaining product quality conformity test results from an assigned domestic or foreign accredited laboratory.

**Commercial Sterile Food**

BPOM issued Regulation No. 25/2020 regarding Guidance on Good Manufacturing Practice for Commercial Sterile Food Sterilized after Packing in conjunction with BPOM Regulation No. 24/2016, which regulates commercial sterile foods, and Regulation No. 19/2019 regarding Guidance on Good Manufacturing Practice for Commercial Sterile Food with Aseptic Processing and Packaging. Commercial sterile foods are low acid products (pH >4.6 and $a_w$>0.85) that have been hermetically packaged (sealed to avoid the entry of microbes during and after heat processing) and commercially sterilized for storage at room temperature. Commercial sterilization must be carried out to an $F_0$ value for at least 3.0 minutes to destroy Clostridium botulinum. This is not required for alcoholic beverages, mineral water, demineralized water, or natural mineral water.
BPOM regulations No. 25/2020 and No. 19/2019 state that this guidance will include:

- Hygiene requirements in the production or harvest area
- Design and facility
- Hygiene facility requirements
- Hygiene and employee health requirements
- Aseptic processing and packaging requirements
- Quality assurance
- Storage and transportation for finished product
- Laboratory control procedure
- Specifications for finished products

**Plant-Based Meat and/or Dairy Alternatives**

This product is included in the BPOM Regulation No. 34/2019 on Food Category and follows the same regulation on processed food, including labeling and registration requirements.

**OTHERS**

- Milk products have special regulations
- Baby food has special regulations

Animal quarantine regulations for live animals and semen vary and should be consulted before exporting live animals to Indonesia. Requirements on exporting live animals (including pet animals) can be found in USDA APHIS International Regulations for Animals page.

**SECTION VIII: TRADEMARKS, BRAND NAMES, AND INTELLECTUAL PROPERTY RIGHTS**

Indonesian Copyright Law No. 19/2002 has been replaced by Law No. 28/2014; Patent Law No. 13/2016 replacing Law No. 14/2001 and Brand & Geography Indication Law No. 20/2016 replaces Law No. 15/2001. In 2009, Indonesia was moved from the U.S. watch list to the U.S. priority watch list for protection of intellectual property.

Copyright protection is valid for 25 to 50 years and a patent is valid for 10 to 20 years. A trademark should be registered at the DG for Intellectual Property Rights in the Ministry of Justice and Human Rights. Generally, the trademark process requires more than one year to complete. Patents typically require at least one and a half years. Once registered, trademarks must be extended every 10 years.
SECTION IX: IMPORT PROCEDURES

As mentioned in the above sections, each commodity needs certain licenses and permits to enter Indonesian territory. Requirements are found in the Ministry of Trade website, named INATRADE. Importers must register with the MOT in order to gain access to the INATRADE system.

On April 1, 2021 the Ministry of Trade issued Regulation No. 20/2021 regarding Import Policies and Arrangement which replaced all of its import policies in Indonesia, including the import licensing system for horticultural products, sugar, fisheries products, salt, animal and animal products, alcoholic beverage, corn, and rice. This new regulation serves as an umbrella regulation for Indonesia’s import policies. However, not much has changed in this regulation compared to the regulations it supersedes. This regulation mainly serves to compile pre-existing trade policies into one document. The new regulation also provides additional information on the requirements to extend Import Licenses (i.e., beef, dairy, horticultural products, corn, rice, sugar) for 30 days for products that have been shipped but arrival will be delayed due to certain unforeseeable conditions e.g., force majeure/natural disaster and transportation disruptions. Importers must submit their extension request at least 7 working days before the validity period expires.

Figure 3. Indonesia: Import Procedure Flow Chart

Note:
BPOM: The National Agency for Drug and Food Control
MOI: Ministry of Industry
MOA: Ministry of Agriculture
MOT: Ministry of Trade
SKI: Entry Permit from BPOM
Pre-shipment inspection

Ministry of Trade Regulation No. 28/2020, as replaced by Ministry of Trade Regulation No. 20/2021, requires a pre-shipment inspection for certain products (see Table 9 below) in the country of origin. Inspections can be carried out by surveyors that have been accredited by the National Accreditation Committee (KAN) as regulated by Ministry of Trade Regulation No. 16/2021 on Verification and Technical investigation in the Foreign Trade Sector.

Table 9. The following must be stated in the surveyor report and delivered to MOT:

To proceed, the following sequence of action should occur:

- Upon acquiring a license, the importer should apply to the Kerjasama Operasi Sucofindo – Surveyor Indonesia (KSO SCISI, Joint operation Sucofindo-Surveyor Indonesia, the State-owned surveyors assigned by the MOT) for import verification by filling out an on-line Verification Request (VR) at [https://app-vpti.com/imp/](https://app-vpti.com/imp/). A down payment on the inspection fee is required.
- The importer will get a Verification Order number (VO No.). This VO will be delivered electronically to the counterpart surveyor in the country of origin (such as Société Generale de Surveillance/SGS).
- The same day the VO is received, the SGS will send a Request for Information (RFI) to the exporter with a cc to importer. The SGS needs the location and date proposed by the exporter for inspection.
- After the SGS agrees (there may be some negotiation in timing), the inspector will come for inspection and will ask for the documents necessary for verification.
- The result of inspection (Physical Inspection Result – PIR) will be sent to the KSO SCISI for issuing Surveyor Report (LS, Laporan Surveyor). The validity of the PIR is 30 calendar days from the date the PIR is issued to the date of shipment based on BL/AWB.
- The LS is a mandatory document to release the goods from the Customs.
SECTION X: TRADE FACILITATION

Advance Rulings
On September 21, 2018 the Ministry of Finance issued Regulation No. 134/2018 regarding Valuation Advice, which enables importers to calculate the customs value of goods to be imported which is valid for three years. This regulation aims to expedite the review process on customs valuation at the customs clearance stage by providing the discretion to submit Valuation Advice prior to submitting the customs declaration (PIB).

E-Certificates
The Indonesian Quarantine Agency has developed an Implementing Arrangement for the exchange of electronic certification (e-Cert) with several trading partner countries such as Australia, New Zealand, and the Netherlands. During the COVID-19 pandemic, Indonesia received e-Phytosanitary Certificates from all countries that have been validated through this website17: https://ppkonline.karantina.pertanian.go.id/checkcert/

17 SPS Notification - WTO
Port Fees
Indonesia has seven international ports, of which Tanjung Priok port is the main gate of international trade activity and handles around 65 percent of national container export and import\textsuperscript{18}. Tanjung Priok port has five terminal operators, as follows:

1. Terminal Peti Kemas Koja, \textit{(tariff)}
2. New Port Container Terminal, \textit{(tariff simulation)}
3. Jakarta International Container Terminal I, \textit{(tariff simulation)}
4. Jakarta International Container Terminal II, \textit{(tariff simulation)}
5. Terminal Mustika Alam Lestari, \textit{(tariff calculation)}

Average Release Time
The average release time takes 2.5 to 3 days and depends on the dwelling time process\textsuperscript{19}, which includes pre-clearance, custom clearance, post-clearance. The process that requires the most time is pre-clearance, from the container’s arrival to its placement in Temporary Storage (TPS). The payment of duties and taxes until the submission of Import Declaration (PIB) requires fulfilling the provisions of several related ministries and agencies. FAS Jakarta has noted in reports that port dwelling times have decreased lately, but some inspections have been moved from the port to importer-owned warehouses.

Most of the common issues in Indonesia’s custom clearance process occur with imported products that are regulated by more than one ministry and require a two or three – step license, e.g. agriculture and livestock products are regulated by the Ministry of Trade, the Ministry of Agriculture and the Quarantine Agency; seafood and fishery products are regulated by Ministry of Fisheries and Marine Affairs, the Ministry of Trade or the Ministry of Industry, and the Agency of Quarantine; processed foods and beverages are regulated by the Ministry of Trade, and the National Agency of Drug and Food Control. The involvement of multiple ministries and agencies needs improved coordination and integration in implementing import regulations so as not to disrupt trade.

Exporters are cautioned to avoid issues with stuck shipments. Re-selling or re-exporting cargo that has arrived at Indonesian ports can be extremely challenging and requires the full cooperation and approval of the original consignee. Therefore, exporters are encouraged to always conduct due diligence on importers before conducting any business. For information on the re-selling of cargo after arrival in Indonesia; please see report on \textit{Guide to Re-selling Containerized Cargo After Arrival}.
