

Required Report: Required - Public Distribution

Date: June 30, 2026

Report Number: SP2026-0014

Report Name: Exporter Guide Annual

Country: Spain

Post: Madrid

Report Category: Exporter Guide

Prepared By: Leila Georgina Lomba Lomba

Approved By: Evgenia Ustinova

Report Highlights:

In 2025, Spain imported \$2.85 billion worth of agricultural, seafood and forest products from the United States, the highest level recorded. Spain's economy continues to be resilient, and GDP is estimated to grow 2.4 percent in 2026, significantly outpacing the broader Eurozone average of 1.2 percent. In 2025, Spain received 96.8 million international tourists, a 3.2 percent increase from previous year. This was Spain's third record-breaking year since 2019 and the best year for tourism in the country since records started. Looking to the future, Spain as one of the most resilient and competitive food industries in Europe will continue to offer opportunities for certain consumers-oriented food and enhance long-term prospects for other products. This report provides guidance to U.S. companies interested in exporting consumer-ready food products to Spain.

Market Fact Sheet: Spain

Executive Summary

Spain is a major producer and exporter of food and agricultural products, with other EU countries as its primary export destination. Spanish producers, processors, wholesalers, retailers, food service operators, and importers are all part of a well-developed agribusiness sector, contributing to a competitive and dynamic domestic scenario. In 2025, Spain's total imports of agricultural and related products reached \$73 billion, up almost 11 percent compared to 2024; 57 percent of these imports originated from the European Union. Imports from the United States reached \$2.85 billion, 27 percent higher than 2024.

Imports of Consumer-Oriented Products

Goods imported into Spain must meet the EU sanitary and phytosanitary requirements on human and animal health, as well as requirements under the customs union. U.S. exporters already exporting to other EU member states will likely meet most of the Spanish import requirements. For animal products, the production plant must be approved for export to the EU.

Total Imports of Consumer-Oriented Products 2025

Food Processing Industry

In 2025, the food-processing sector continued to consolidate its position as an important industrial sector. Spain has one of the most competitive food processing industries in Europe, which makes this sector an important target for U.S. exports of food ingredients. Industry's interest in developing new products continues to present opportunities for food ingredients. Spain's food-processing sector is focused on the quality, safety, and traceability.

Food Retail Industry

The competitive retail landscape remains highly fragmented in 2026. Within grocery store-based retailing, Mercadona retains the leading position, followed by Carrefour. Uncertain economic conditions and reduced disposable income are expected to persist in 2026, leading consumers to focus on store brand products, essential items, and to reduce impulse purchases, forcing retailers to maximize their efficiency to retain margins.

Section 1: Market Overview

Size of economy, purchasing power

The Spanish economy grew 2.8 percent in 2025, one of the fastest in the eurozone, driven by strong domestic demand, robust tourism, and EU recovery funds, outperforming other traditionally stronger economies such as Germany and France. Economists point to Spain as a ‘bright spot’ in Europe, with strong performance expected to continue through 2026.

In their latest [World Economic Outlook report](#), the International Monetary Fund (IMF) forecasted a 2.8 percent growth rate for the Spanish economy in 2025 and expected 2.1 percent in 2026. Nevertheless, the growth forecast for Spain’s economy is still above the average growth forecast for its peers in the Eurozone (1.4 percent in 2025 and 1.1 percent expected in 2026). External risks include the stagnation of the eurozone, high economic policy uncertainty due to the lack of consensus in Europe, and international trade uncertainties. There are also internal risks, such as investment that has not yet responded to GDP growth, the lack of housing, aging population, and the high unemployment rate.

Spain received 96.8 million visitors in 2025, a 3.2 percent increase over the previous year. This was Spain’s second record-breaking year since 2019 and the best year for tourism in the country since records started. Spain’s economy in general, and the HRI sector in particular, is heavily dependent on tourism, accounting for approximately 13 percent of GDP.

Population and key demographic trends

In terms of population and demographic trends, Spain’s population rose from 40.5 million in 2000 to a record 49,590 million on January 1, 2026. According to the National Statistics Institute ([INE](#)), this is the highest-ever figure since records began. This figure confirms that Spain's population growth continues, due almost entirely to an increase in foreign citizen naturalization. Despite this increase, Spain has one of the lowest fertility rates in the world and a rapidly aging population, a trend that is forecast to continue in the next decade. Correspondingly, the market will have to adapt to this demographic change and its impact on future consumer trends and preferences.

Table 1. Advantages and Challenges Facing U.S. Exporters in Spain

Advantages	Challenges
Spanish consumers are increasingly open to new products. The United States is a favorite destination for Spanish travelers outside the EU, increasing the popularity and interest in U.S. food products.	High import tariffs and import regulations impose a price disadvantage on non-EU based companies. Competitive disadvantage exists with direct competitors with signed Free Trade Agreements, such as Canada, Mexico and MERCOSUR.
U.S. products have a good reputation with importers and retailers. U.S. suppliers are known for being serious business partners. Consistent quality and supply reliability are highly appreciated.	Food imported from third countries, including the U.S., must comply with EU food laws and labeling, traceability, and packaging rules, which vary from U.S. regulation and practice.
Increased demand in retail channels for innovative and sustainable products and packaging. Importers look to the U.S. as a source for novel products and new trends.	High transportation costs. Small exporters face difficulties in shipping mixed/smaller container loads vs EU competitors or big exporters.

Good network of agents and importers to help get products into the market and consequently, into the retail chain.	Competition from EU countries, where tastes and traditional products may be better known.
New generations of consumers demand healthy, innovate, sustainable products, creating new opportunities.	Lack of consumer awareness of U.S. brands, applicability, and varieties of U.S. products. Despite interest, introducing new-to-market brands and products is not easy.
Distribution structure is modern, and many companies cover both Spain and Portugal.	The economic environment post-pandemic; adjustments to the overall economy, tourism, and consumer habits.

In 2025, Spain imported \$73 billion worth of agricultural and related products from the world. Spain’s main trading partners are other EU Member States, as shown in the chart below:

Section 2: Exporter Business Tips

Local Business Customs and Trends

Success in introducing products in the Spanish market requires local representation and personal contact. With the recent years' pandemic restrictions, Spanish companies have adapted and are increasingly willing to engage through online interactions. A local representative can provide up-to-date market intelligence, guidance on business practices and trade-related laws, sales contact with existing and potential buyers, and market development expertise.

Spain has sales channels ranging from traditional distribution methods, in which wholesalers sell to small retailers that sell to the public, to large multinational supermarkets and retail stores. However, personal relationships are still very important, especially within smaller organizations. The decision-making process within a Spanish company may be different from that in the United States. An initial "yes" usually means that the company will study the situation, and not necessarily that they will buy the product. Once a deal is signed, the Spanish company will likely expect the U.S. firm to translate into Spanish commercial brochures, technical specifications, and other marketing materials. Decision makers at Spanish firms may speak English, but paperwork should be in Spanish.

Market Entry Strategies

All goods imported into the EU, including Spain as a Member State, must comply with sanitary and phytosanitary standards designed to protect human and animal health.

Market entry strategies for U.S. products intending to enter the Spanish market should include:

- Market research to assess product opportunities;
- Advanced calculations of the cost of introducing the product in the Spanish market to prove its competitiveness in the local market;
- Identify an experienced distributor or independent reliable agent to advise on adequate distribution channels, import duties, sanitary regulations, and labeling requirements;
- Explore the purchasing arrangements of the larger retail channels.

Section 3: Import Food Standards and Regulations and Import Procedures

Food Standards and Regulations

For detailed information on food standards and regulations, please consult the Food and Agricultural Import Regulations and Standards Country Report (FAIRS) for the [EU](#) and [Spain](#) and the FAIRS Export Certificate Report for the [EU](#) and [Spain](#).

General Import and Inspection Procedures

Spain follows the Harmonized Nomenclature and Classification System (HS) and applies [EU import duties](#) according to a maximum and minimum rate schedule. The minimum tariff rate is applied to goods originating in countries entitled to the benefits of most-favored nation treatment; that is, members of the

World Trade Organization (WTO), including the United States, and countries with which the EU has signed trade agreements. In some instances, [negotiations and trade agreements](#) in place between the EU and other countries provide for advantageous access to the European market.

Currently, the EU and the United States have the following agreements and arrangement in place:

- [US-EU Organic Equivalency Arrangement](#)
- [US-EU Veterinary Equivalency Agreement](#)

Customs Clearance

The local importer has primary responsibility with the Spanish Government for imported food products once they enter Spain. It is recommended that U.S. exporters verify all import requirements with their Spanish buyer. The buyer and local freight forwarder are in the best position to research such matters and assist with local authorities. The final authorization to import any product is subject to the Spanish rules and regulations as interpreted by border officials at the time of product entry.

In general, for shipments of foodstuffs to Spain, the following documents are required for ocean or air cargo shipments of food products into Spain:

- Bill of Lading and/or Airway Bill
- Commercial Invoice
- Phytosanitary Certificate and/or Health Certificate, when applicable
- Import Certificate

Country Language Labeling Requirements

The Standard U.S. label does not comply with the EU's labeling requirements. Detailed information on labeling requirements that apply in the EU as of 2016, available in the [GAIN USEU report on New EU Food Labeling Rules](#). This information can be supplemented by [GAIN report How to Comply with the EU's New Food Labeling Rules](#). In addition, the Spanish different associations have published a [guidance document](#) for compliance.

Please keep in mind that if the product you are exporting into Spain does not comply with EU harmonized regulations, Spanish customs or health authorities would not allow entry of the product.

Section 4: Market Sector Structure and Trends

Table 2. Best Consumer-Oriented Product Prospects Based on Growth Trends

Product Category (TMT; million USD)	Major Supply Sources in 2025 (in value)	Strengths of Key Supply Countries	Advantages and Disadvantages of Local Suppliers
Frozen Fish Quantity: 287 Value: \$841 million	1.Portugal - 17% 2.South Africa - 15% 3.Netherlands - 3%	Other major suppliers offer high quality fish products at competitive prices.	Large competition from local producers. Domestic consumption and exports largely exceed local supply.

Almonds Quantity: 102TMT Value: \$565 million	1. USA - 79% 2. Portugal - 13% 3. Germany - 3%	Limited competition from other countries. Spanish demand is high, and production is insufficient to satisfy demand.	Spain produces almonds, mostly used roasted as a snack. U.S. almonds are processed, both used domestically or exported.
Pulses Quantity: 253 TMT Value: \$288 million	1. USA - 24% 2. Canada - 18% 3. Argentina - 17%	Strong competition from Argentina, which greatly increased its presence in recent years, and Canada, a traditional supplier.	Spain is a traditional consumer of pulses and a net importer, as local production is insufficient to fulfill internal demand.
Pistachios Quantity : 24 TMT Value: \$234 million	1. USA - 77% 2. Germany - 9% 3. Iran - 5%	Iranian pistachios are the low-price competitor but continue to lose market share.	Local pistachio production is growing, but still very limited. Demand continues to grow significantly.
Distilled Spirits Value: \$1,145	1. U.K. - 31% 2. USA - 13% 3. Netherlands - 12%	Main competitors are other EU countries. Difference in legal format of alcohol containers; exporters need to adapt to EU size.	Increasing interest in U.S. distilled drinks, mainly bourbon and gin.

Market Structure:

Food Retail Sector

Retail in Spain showed signs of gradual stabilization, facing inflation and a series of economic challenges, with consumer confidence slowly returning. Inflation is under control thus easing the inflationary pressure, although grocery product prices remain high. In this context, consumer habits continue to evolve, both in the composition of the shopping basket and in the consumer profile. With grocery prices remaining elevated, consumers are less faithful to particular retailers and are more attentive to price and store promotions. With supermarkets struggling to maintain affordable prices for their branded products, private labels are becoming an increasingly important competitive tool for retaining the loyalty of shoppers. In this sense, discounters are a good example. In the Spanish market, discounters have built their reputation on lower prices than those found in supermarkets. Private label products have proven key in generating sales growth within these retailers, as they continue to be the preferred option for many shoppers. The appeal of private labels remains strong due to their cost-quality ratio. Overall, price remained the main factor driving consumers' purchasing decisions in 2025.

In addition, according to consumer behavior surveys from the Spanish retail association, shoppers in Spain prefer more frequent visits to nearby grocery stores over making larger purchases once or twice a week. This shift has led to a decline in sales for the supermarkets channel, particularly for chains less able to leverage proximity. In this environment, supermarket operators with an extensive distribution network positioned near consumers hold a competitive edge, and many grocery retailers are now opting for smaller retail spaces to maintain proximity and respond to changing consumer needs.

Table 3. Top 10 Spain Country Retailers

Retail Organization	Sales 2025 (\$ Million)*
<u>MERCADONA</u>	46,100
<u>GRUPO CARREFOUR</u>	13,000
<u>LIDL SUPERMERCADOS</u>	8,500
<u>DIA RETAIL ESPANA, S.A.</u>	7,000

<u>CONSUM, S. COOP.</u>	5,100
<u>EL CORTE INGLES ALIMENTACION</u>	3,500
<u>BON PREU, S.A.</u>	3,000
<u>AHORRAMAS</u>	2,000

Source: [Alimarket](#); *Estimate

In 2025, Mercadona continued to lead supermarkets in terms of value sales in Spain, driven by ongoing innovation in its private label product lines. Mercadona has also reiterated its commitment to the environment by introducing eco-friendly stores and expanding its in-store offerings to include more locally sourced products. Despite the overall trend of consumers preferring neighborhood stores with frequent shopping, membership-only big-box warehouse club Costco is seeing growth in Spain, though it is still quite unknown to the average consumer. According to Alimarket, in 2024 Costco sales were 618 million Euros.

For more information, please see the [Spanish Retail Food Sector report](#).

Hotel, Restaurant and Institutional (HRI) Sector

The HRI sector in Spain showed remarkable strength and adaptability throughout 2025, consolidating the path to recovery and growing 7 percent compared to 2024. This dynamism was significantly driven by the exceptional performance of tourism, both national and international.

The HRI sector is highly connected with tourism. Spain's tourism industry data reflects an extraordinary recovery in tourism, as foreign tourist numbers hit another record in 2025. In 2025, Spain received 96.8 million international visitors, a 3.2 percent increase compared to the previous year, the best year for tourism in the country since records started. The income from foreign visitors reached \$158.9 billion, up 7 percent from the \$143 billion spent in 2024. Tourism, a buoyant sector in Spain that largely drives the positive economic results, accounts for 13 percent of GDP.

For more information, please see the [Spanish HRI Sector](#) report.

Food Processing Sector

In 2025, this sector provided 474,600 jobs, representing 19 percent of the total industrial workforce. The food industry in Spain consists of mostly small and medium-sized companies: in 2025, there were 27,896 food processors throughout the country. The industry produced \$190 billion worth of products in 2025. Exports continue to be critical for the development and support of the industry and were valued at \$60 billion in 2025, with a trade surplus of \$19 billion. The European Union continues to be Spain's first trading partner. Outside the EU, the main export destinations for Spanish food and beverage products are the United Kingdom, the United States, and China. Spain has some of the most competitive food processing industries in Europe, which makes the sector an important target for U.S. food ingredient exporters.

For more information on the Spanish food processing sector, visit [Spanish Food Processing Sector](#) report.

Section 5: Agricultural and Food Imports

Table 4. Agricultural and Food Import Statistics

AGRICULTURAL PRODUCTS IMPORTS (\$ Million)	2022	2023	2024	2025*	2026
Total Agricultural and Related Products	63,814	64,910	65,558	72,922	73,000

Source: Trade Data Monitor LLC; * Estimate

Best High-Value, Consumer-Oriented Product Prospects Category

Products Present in the Market with Good Sales Potential

Tree nuts (particularly almonds, walnuts, and pistachios) -- Peanuts -- Pulses -- Fish and Seafood (frozen) -- Surimi -- Spirits

Products Not Present in Significant Quantities with Good Sales Potential

Functional and innovative health food -- Free-from products (lactose-free, gluten-free) -- Specialty and snack foods -- Nuts e.g., pecans -- Sweet potatoes -- Pet foods

Products Not Present Because They Face Significant Barriers

Red meat and meat preparations (hormone ban) -- Poultry (sanitary procedures, i.e., pathogen reduction treatments) -- Processed food (with GMO ingredients)

Section 6: Key Contacts and Further Information

If you have any questions, please contact the [Office of Agricultural Affairs in Madrid](#). For more information on exporting U.S. agricultural products, the [FAS website](#) also offers recent reports of interest to U.S. exporters interested in the Spanish market. Additionally, useful contacts include:

Trade Associations

[Spanish Federation of Food and Beverage Industries](#)

[Spanish Federation for HRI Sector](#)

[Spanish Association for Distributors and Supermarkets](#)

[Spanish Restaurant Chain Association](#)

Government Agencies

[Spanish Agency for Food Safety and Nutrition](#)

[Ministry of Agriculture, Fisheries and Food](#)
