Date: December 23,2019

Report Number: RB2019-0007

Report Name: Exporter Guide

Country: Serbia

Post: Belgrade

Report Category: Exporter Guide

Prepared By: Tatjana Maslac

Approved By: Frederick Giles

Report Highlights:

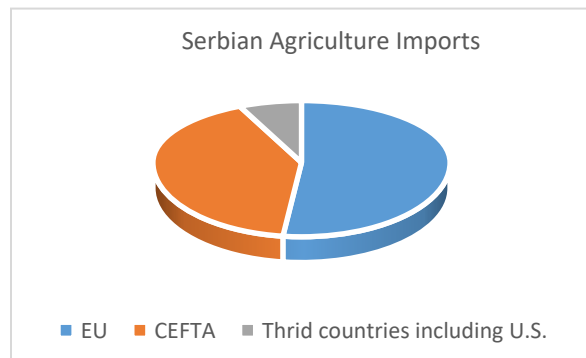

Agriculture and food production in Serbia is the most important export sector, accounting for over 10 percent of the country's GDP and around 20 percent of all exports. The Serbian market offers good opportunities for U.S. exporters of consumer-oriented agriculture products. In the period January-October 2019, total U.S. exports of agriculture products to Serbia reached \$20.4 million, nearly the same as last year. The largest segments were almonds, snack food, prepared meals, sunflower seeds, vegetable planting seeds, dietetic foods and concentrated proteins without dairy fats, alcoholic drinks, frozen fish and seafood, and snacks and fruits. This report provides U.S. food and agriculture exporters with background information and suggestions for entering the Serbian market. It was updated in December 2019.

Market Fact Sheet:

Executive Summary

Serbia is ranked 48 among 190 economies on the ease of doing business, according to the latest World Bank annual ratings. For 2019, projected GDP will reach \$46 billion. Serbia is a developing economy country with its own strong agriculture and food industry contributing over 10 percent to GDP. It is expected that GDP growth will be approximately 3.5% in 2019. Average annual inflation is expected to pick up to 2 percent. Serbia has free trade agreements with the European Union, Turkey, the Eurasian Economic Union (Russia, Kazakhstan, Belarus, Armenia and Kyrgyzstan). It is also a signatory to the Central European Free Trade Agreement (CEFTA). In the period January-October 2019, Serbia's total agro-food exports reached a value of \$2.71 billion, a 5.9 percent increase from the same period in 2018. Total agro-food imports into Serbia for the period January-October 2019 were valued at \$1.56 billion, an increase of 4 percent compared to the same period in 2018.

Serbian Agriculture Imports

In the period January-October 2018, agro-food imports were \$1.56 billion, a 4 percent decrease compared to the same period in 2018. Over 50 percent of imports come from EU member states and 40 percent from CEFTA member countries. Total U.S. agro-food exports to Serbia for the period January-October 2019 were valued at \$20.4 million, nearly unchanged from 2018. One of the major obstacles to increasing U.S. market share in Serbia is

a 5-30 percent customs import tax levied at port, compared to zero import taxes for products coming from countries with whom Serbia has signed free trade agreements. Major commodities imported from the United States: tobacco (\$8.1M), almonds (\$2.7M), snack food (\$2.4M), whisky bourbon (\$2.1M), vegetable seed (\$600,000).

Food Processing Industry

Serbia is the largest agricultural market in the Western Balkans with a strong tradition in agricultural production and food processing. The food processing industry accounts for approximately one third of the entire processing industry in Serbia. Currently, more than 5,000 food business are operating in the country. Approximately 90 percent are micro, small or medium-sized enterprises. The industry employs over 70,000 people and is one of the rare examples of industries that have not been hit adversely by the economic crisis in the past years. The largest subsectors by value are dairy, meat, fruits, vegetables, wine pr and confectionary industry.

Food Retail Industry

Retail turnover in the Serbian market is approximately \$6-7 billion a year, which represents a rather small market. Foreign retail chains hold over 80 percent of the total retail market. The retail market is mostly divided between Dutch-owned Delhaize (owner of retail chains Maxi and Tempo) and Croatian Fortenova Group (owner of retail chains Idea, Roda and Mercator). Other international retail chains include Germany's Metro and Lidl and Greece's Super Vero. The following domestic retail chains represent only some 20 percent of the Serbian market: Dis, Univerexport and Gomex. More than 50 percent of all food products are still sold through small grocery shops (estimated to number close to 30,000).

Serbian Market Advantages and Disadvantages

Strengths	Weaknesses
Serbian consumer-ready food imports are increasing.	Serbia is not a member of WTO and the US has no tariff advantages.
International retail chains have become more prevalent.	U.S. products tend to be higher priced than CEFTA, Turkey, the Eurasian Economic Union products that enjoy preferential market access.
Opportunities	Threats
Serbia has shortages of some agricultural products (beef, pork, poultry, soybean meal, almonds, snack food, beans, seeds, fish, and seafood).	Serbia conducts most of its trade with nearby countries. Long distance and high shipping costs put U.S. products at a disadvantage compared to EU and CEFTA sourced products
Serbia needs new seed varieties of crops and vegetables.	Serbia continues to ban biotech products, but the U.S. share of crop and vegetable seeds is increasing.

Section 1. Detailed Market Overview

Economic situation

Macroeconomic trends in Serbia were generally favorable in 2019. The year-on-year GDP grew by an expected 3.5 percent, inflation and the current account deficit were low and stable (2 percent year-on-year inflation and 2.7 percent of GDP current account deficit). Employment growth was moderate, credit activity slowly revived with a sharp reduction in non-performing loans, and the state budget was in surplus with a gradual reduction of public debt.

It is estimated that Serbia will achieve economic growth of 3.5 percent in 2019, that is less than in 2018 when according to the International Monetary Fund (IMF) economic growth was 4.2 percent, the largest annual growth since the outbreak of the crisis at the end of 2008. expected GDP is expected to increase to 4 percent in 2020. The unemployment rate decreased from 11.9 percent in 2018 to 9.5 percent in 2019. The average net wage in 2019 is estimated at 53,600 dinars (\$505), an increase of 8.3 percent year-on-year.

Serbia has been in the accession process for full membership into the European Union (projected year 2025) since 2014. The country has opened 17 of 35 EU Acquis chapters in order to harmonize its regulations in different sectors of the economy and general political structure with EU regulations. Of 17 open chapters, 2 chapters have already been provisionally closed. On December 10, 2019 the European Commission (EC) opened one more chapter of the EU Acquis, Chapter 4 on Free Movement of Capital.

Overall Business Climate

Serbia's open economy and strategic geographical location make it an attractive destination for investments and exports. Serbia's easy access to both EU and non-EU markets, highly skilled and educated work-force, and sound infrastructure have led global companies to locate manufacturing and service facilities there (see Serbia's Country Commercial Guide https://www.export.gov/article?series=a0pt0000000PAunAAG&type=Country_Commercial_kav).

Recent Trends

Local and regional media frequently publish articles detailing consumers' perceived (and actual) discrepancies in the quality of identically branded food products sold in Western Europe and Serbia. Worries about ingredients and lower quality also have strong influence on buyers' confidence in import products. This so called "dual ingredient" issue was common in Central and Eastern European countries. Most consumers adjust their eating habits and diet for health reasons, as health consciousness is increasing. Therefore, a slight growth was observed in the consumption of hypoallergenic and organic food products, but price sensitivity is still among the most influential factors affecting purchasing decisions.

Advantages	Challenges
Strengthened Serbian dinar makes imports cheaper	Import duties favor companies in the region.

Urban populations continue to grow and generally have higher incomes.	The Serbian market is relatively small and price sensitive.
During the EU accession process and transition period before tariffs are eliminated there may be market opportunities for U.S. products if immediate steps are taken to secure those markets.	Serbia is a member of CEFTA and has entered into free trade agreements with the Eurasian Economic Union (Russia, Kazakhstan, Belarus, Armenia and Kyrgyzstan) and Turkey, thus these countries already enjoy preferential access for their agricultural products.
Serbia does not produce rice and certain fruits and vegetables.	The regulatory process can be cumbersome.
Serbia is a member of Codex, OIE, UPOV, FAO, and OECD, all of which are organizations that have agendas generally complementary to U.S. trade interests and priorities.	Given Serbian aspiration to accede to the EU, Serbia is likely to support EU positions in these venues even before it fully becomes an EU member.
Serbia has huge demand for the U.S. animal genetics under low custom tariffs.	Serbian purchasing power is modest.

Section 2. Exporter Business Tips

Market Access

The Foreign Trade Law (“Official Gazette RS” No.36/09, 36/11, 88/11 and 89/15), <http://mtt.gov.rs/en> regulates foreign trade. The flow of goods designated for import is supervised by the Serbian Customs authorities. Customs supervision generally ends when goods are customs cleared and import duties paid, although special customs procedures exist for customs warehousing, inward processing relief, and transit.

Serbian regulations do not impose significant restrictions on foreign trading. However, there are some restrictions on the import of certain types of goods, i.e. import licenses are required for certain pharmaceutical substances, meat products, animals, precious metals, arms and dual-use goods. Furthermore, restrictions are imposed on import/export payments and collection operations as defined by the Law on Foreign Exchange Operations.

Local business customs

U.S. food exporter should focus on establishing their business relationship with a reliable and efficient importer and distributor. Identify the appropriate distribution and sales channels. U.S. exporters and Serbian importers could expand trade by strengthening confidence through visits of U.S. exporters/manufactures to Serbia, exploring opportunities firsthand, and meeting with relevant Serbian importers. A contact list of Serbia’s major food supermarkets, importers, wholesalers and distributors by sector is available upon request from FAS Belgrade Office to potential U.S. exporters.

Large food retail chains like Delhaize, Fortenova Group and Lidl have their own purchasing and importing division to handle food imports directly. U.S. suppliers should initially contact the purchasing/importing divisions of these large food chains, especially for new-to-market food products.

U.S. exporters should consider the price sensitiveness of their customers, their product requirements, purchasing policies, and expected purchase volumes.

General Consumer Tastes and Preferences

According to Serbian Statistical Office, the average Serbian consumer spends over 50 percent of his/her monthly income on food, compared to the average EU consumer who only spends 18 percent of his/her income on food. Most Serbian consumers view price as the primary factor when purchasing food and beverages. Large supermarket chains have become more popular as the main food sales point over the last ten years. Customers generally purchase food once or twice a month from these outlets. Due to rising food prices and the weak purchasing power of many consumers, neighborhood corner shops are regaining the loyalty of customers for daily purchases of staple foods. Perishable foods, fruits, vegetables, bread and fresh meat are mostly sold at specialized stores or green markets.

Distribution Channels

Supermarket and hypermarket expansion in Serbia over the past 15 years has brought limited benefits to consumers and small suppliers like farmers. Retail turnover in the Serbian market is approximately \$6.5 billion a year, which represents a rather small market. If Serbia's retail turnover is calculated per square meter of retail space compared to neighboring. An analysis by Serbia's Economic Institute for the period 2000-2017 reveals a significant increase in retail prices for many product categories. There are a number of foreign retail chains in the Serbian market, primarily regional players, and several international players such as Delhaize, Foretenova Group and Lidl. Foreign retail chains hold over 80 percent of the total retail market. The retail market is mostly divided between Dutch owned Delhaize (owner of retail chains Maxi and Tempo) and Croatian Foretenova Group (owner of retail chains Idea, Roda and Mercator). Other international retail chains present include Germany's Metro and Lidl and Greece's Super Vero. The following domestic retail chains represent only 20 percent of the Serbian market: Dis, Univerexport and Gomex.

Labeling and Marking

In March 2018, the Ministry of Agriculture adopted amendments on the Rulebook on Declaration, Labeling and Marketing of Food ("Official Gazette" RS No. 16/18). According to the newly adopted amendments of the rulebook, implementation of this Rulebook was delayed until December 31, 2018. The rulebook requires nutritional labels with more information on all food products in order to protect public health.

Section 3. Import Food Standards and Regulations

Goods imported into Serbia are subject to customs duty rates provided in the Law on Customs Tariff ("Official Gazette RS" No.115/12, 130/14, 98/15 97/16 and 95/18) or <http://www.upravacarina.rs/en/Zakoni%20engleski/SR-Customs%20Tariff%20Law-EN-2009.pdf>) and the Decree on "Harmonization of Customs Tariff Nomenclature ("Official Gazette RS" No.98/15), <http://www.upravacarina.rs/cyr/Poslovnazajednica/Stranice/Carinskatarifa.aspx> .

These rates are ad valorem (with certain exceptions) and apply on goods originating in countries, which have Most Favored Nation (MFN) status with Serbia. Effective January 1, 2014, per Serbia's Stabilization and Association Agreement with the European Union (SAA), approximately 95 percent of

all EU agricultural imports became duty-free. All other items now have an average duty rate of 0.99 percent, although the rate is significantly higher on certain sensitive agricultural commodities.

Serbia's customs authorities also assess excise duties on oil derivatives, live cattle, tobacco products, alcoholic beverages and coffee (green, roasted and ground coffee and coffee extracts). Excise duties in Serbia are either specific (for oil derivatives, alcoholic beverages, cigars and cigarillos), ad valorem (for coffee and pipe tobacco), or combined (for cigarettes - specific + ad valorem on retail price). VAT is payable on all imports, assessed together with customs duty. For most types of goods, the general VAT rate of 20 percent applies, calculated on the customs value and inclusive of customs and excise duty (if any). For the importation of certain goods (e.g. fruit and vegetables, meat, cereals, pharmaceuticals) the reduced VAT rate of 10 percent is applicable.

For more detailed import standards and regulations please refer to FAS Belgrade's 2018 Food and Agriculture Import Regulations and Standards (FAIRS), Narrative and Certification report that can be downloaded from: <https://gain.fas.usda.gov/#/>

Section 4. Market Sector Structure and Trends

Market Opportunities for Consumer Food Products:

Despite these challenges, there are market opportunities for high quality U.S. products because of growing consumer awareness in Serbia.

Serbia has free trade agreements with the European Union, Turkey and the Eurasian Economic Union (Russia, Kazakhstan, Belarus, Armenia and Kyrgyzstan). It is also a signatory to the Central European Free Trade Agreement (CEFTA). According to Serbia's Customs Office, the trade deficit for the period January-October 2019 was \$4.9 billion or 6.5 percent higher than in the same period in 2018 (\$4.6 billion). For the period January-October 2019, Serbia exported goods valued at \$14.6 billion and imported goods valued at \$19.5 billion (2.3 percent higher than in the previous year). The EU remained Serbia's most important trade partner, accounting for over half of foreign trade, followed by CEFTA countries.

Serbia's total agro-food exports from January to October 2019 reached a value of \$2.71 billion, a 5.9 percent increase from the same period in 2018. Agriculture is the most important export sector, accounting for over 20 percent of all Serbian exports and enjoying a trade surplus of \$1.15 billion in January - October 2019. In CY2018, total agro-food exports were \$3.4 billion, 6.25 percent higher than in CY2017.

Agro-food imports were \$2 billion, a 33 percent increase compared to the same period in CY2017, mostly due to a strong domestic currency, cheaper imports and high export prices. In CY2018, Serbia recorded trade surplus for agro-food products of \$1.4 billion. Since 2001, agricultural exports have enjoyed preferential EU and CEFTA access. Exports consist mainly of grains, sugar, fruits and vegetables (fresh and frozen), confectionary products and beverages.

Best High Value Product Prospects

Product	Total Imports	U.S. potential	Key Constraints	Market Opportunities
----------------	----------------------	-----------------------	------------------------	-----------------------------

Category	to Serbia (Million \$)	share of the total imports		
Coffee and Tea	41	30%	Strong competition from South America, Africa, India and Vietnam.	Growing market and demand for greater variety and higher quality.
Grains and Vegetable Seeds	90	30%	Strong competition from domestic Seed Institutes and EU companies.	Growing demand for higher quality of new varieties of seeds to achieve higher yields and higher quality products.
Wine	32	10%	Strong competition from EU and CEFTA countries at lower price point.	Growing market for higher end wines as Serbian living standard increase.
Protein concentrates	20	37%	Lack of familiarity with U.S. products.	Growing demand and interest in new products.
Pet Food (Dog & Cat Food)	25	30%	Competition from EU/CEFTA countries and U.S. franchises in the EU.	Serbia has very limited production of pet food. Consumption of pet food is expected to grow as Serbians are having more pets than before.
Fish & Seafood	58	20%	Competition from EU sources.	Demand and consumption is increasing along with changing eating habits and growth in restaurant and tourism business.
Snack Foods	80	25%	Strict biotech legislation and significant competition from EU and CEFTA.	Market that will continue to grow with demand for new products.

*Tariff rates can be found at www.carina.rs

Section 5. Agricultural and Food Imports

Agricultural trade with the United States

The United States was in the 22nd position for imports to Serbia for the period January-October 2019, a drop of 12 percent compared to the same period in 2018. Total agro-food imports from the United States to Serbia for the period January-October 2019 were valued at \$20.4 million, almost the same as in the same period in 2018. One of the major obstacles to increasing U.S. market share in Serbia is a 5-30 percent customs import tax levied at port, compared to zero import taxes for products coming from the European Union, CEFTA countries and other countries with whom Serbia has signed Free Trade Agreements.

U.S. agro-food exports consisted mainly of almonds, snack food, prepared meals, sunflower seeds, vegetable planting seeds, dietetic foods, and concentrated proteins without dairy fats, alcoholic drinks, frozen fish and seafood and fruits. The long-term forecast for these products is that they will continue to grow. In the medium term, Serbia is also likely to increase imports of planting seeds, fish and fishery products, and poultry meat for processing, high-value consumer products, and beverages. Possibilities also exist for the expansion of U.S. exports of high value products such as tree nuts, raisins, snacks,

beverage concentrates, planting seeds and seedlings, bovine semen and embryos, flavors, and fragrances.

In the period January-October 2019, agro-food exports from Serbia to the United States were \$26.8 million, decrease of a 10 percent compared with the same period in 2018. In the period January-October 2019, Serbia enjoyed a \$6.4 million surplus in agricultural trade with the United States. The main agricultural imports from Serbia include almonds, yeast, frozen vegetables, fruit juices, confectionary products, brandy, processed fruits (jams, puree, and jelly), sweet corn, coffee, wine, cheese, mineral water and bakery products.

According to the USDA BICO Reports, exports of U.S. agriculture and food products are smaller than according Serbian Official Customs Data, due to several transshipments to EU countries that BICO does not register as U.S. exports.
