General Information

Algeria's Press Service reported the grain harvest for the current crop year reached 4 MMT. This year's grain output is up 14.3 percent compared to last year's 3.5 MMT despite some unfavorable weather conditions that were well managed. Bread wheat accounted for 1 percent of the total output of 4 MMT. High temperatures are not conducive to growing bread wheat, for this reason Algeria has always planted fewer hectares of bread wheat than durum and barley and has always imported more bread wheat. Algeria will continue to import as domestic production is still hampered by severe weather conditions.

The GOA is attempting to boost output through improved irrigation and by increasing areas irrigated to one million hectares. Additionally, the GOA continues to encourage the use of certified seeds as well as increasing mechanization and storage capacity by building new silos.
