Grain and Feed Update

Production is Stable, Domestic Consumption is Sliding

Approved By:

Dwight Wilder, Agricultural Attaché

Prepared By:

Denys Sobolev, Agricultural Specialist

Report Highlights:

In 2016, wheat production remained close to the level of the previous year despite decreased production area under winter crop. Barley production slightly exceeded the previous year's mark. Corn production is expected to be at least 10 percent higher compared to the previous year based on expanded production areas. All grains demonstrate higher yields as the result of favorable weather conditions. Wheat food consumption as well as feed consumption for all grains has been downscaled based on shrinking animal numbers, the difficult economic situation, and change in consumer preferences. Decreased domestic consumption and lower ending stocks for grains allowed for higher exports. Decreasing rye production opened the opportunity for imports of this crop for MY2015/16.

Post:

Kiev

Executive Summary:

Production

The local marketing year (MY) has been concluded for wheat, barley and rye. According to industry sources, 60 percent of wheat is of milling quality and 40 percent is feed quality.

According to the information by the State Statistics Service of Ukraine (SSSU) in 2016 farmers harvested: almost 26.6 million metric tons (MMT) of wheat, 2.5 percent below the 2015 level; 9.7 MMT of barley, 13 percent above; and almost 402 thousand metric tons (MT) of rye, comparable to 2015 level. These numbers are estimated by FAS Kyiv as production volumes for MY2016/17.

Corn harvesting is still in progress and according to a report provided by the Ministry of Agricultural Policy and Food of Ukraine (MAPF), Ukrainian farmers have already harvested 1.2 million hectares (ha) translated into 6.2 MMT of grain as of October 4, 2016. Given the generally favorable weather conditions during the season, FAS Kyiv estimates the corn production volume for MY2016/17 at 26MMT.

For a more comprehensive outlook of Ukrainian the grain market please refer to our [GAIN Report UP1609](#).

Currently, Ukrainian farmers are planting winter grains and according to MAPF's report they have sown 3.6 million ha of wheat, 119 thousand ha of rye and 181 thousand ha of barley as of October 4, 2016. These numbers are 3 to 8 percent lower compared to the previous year.

Planting decisions made by farmers in regard to winter grains are being impacted by both economic factors and weather conditions.

Economic factors include low international grain prices as well as depreciated farm-gate prices caused by inefficiency of inland logistics (please refer to Trade section for more details).

Weather factors suggest insufficient levels of topsoil moisture as of the end of September 2016, which is confirmed by local weather reports as well as satellite imagery data (please refer to comparative images of Derived Surface Wetness Anomalies for 2016 and 2015).

Decreased prices and potential for low yields could lead to decreased areas under winter grains as farmers will likely opt for planting more profitable spring crops (predominantly oilseeds).

Trade

According to a report by the State Fiscal Service of Ukraine, Ukraine exported 17 MMT of wheat; 4.4 MMT of barley and 19.7 thousand MT of rye for MY2015/16. Please refer to the Author Defined section at the end of the report for more information.

For MY2015/16, 6.3 MMT of Ukrainian wheat was exported to a number of countries in East and Southeast Asia including traditional buyers Thailand, Indonesia, Bangladesh and South Korea. Sales to these destinations have surged twofold, stemming from the need to sell off the 2015 bumper harvest.

Another growing market was the EU, which bought 2 MMT of wheat in MY2015/16, a 40-percent increase compared to the previous MY. Exports to this destination are primarily supported by a [Tariff Rate Quota](#) (TRQ) offered to Ukraine under the Deep and Comprehensive Free Trade Area. Recently, the EU announced a further increase of TRQ ceilings for a number of agricultural products from Ukraine, including grains that might further boost exports to this market. For more information please refer [European Commission's proposal](#).

A fall in domestic bread consumption is forcing Ukrainian millers to increasingly sell to international markets (please refer to Consumption section for more details). For MY2015/16, Ukraine exported 365 thousand MT of wheat flour and products, an increase of almost 30 percent compared to the previous MY. The major growth destinations are East and Southeast Asian countries. According to industry sources, the major consumer of Ukrainian flour for this region remains North Korea, which is importing both directly as well as transshipping the commodity through China.

Barley exports reached 4.4MMT for MY2015/16. Trade has been redistributed from the Middle East, which bought 2.6 MMT, a 30 percent decrease compared to the previous MY. Instead, 872 thousand MT were shipped to East and Southeast Asia, a two-fold increase; 653 thousand MT to Africa, a 76-percent increase; and 231 thousand MT to the EU, a three-fold increase.

Ukraine's MY2015/16 corn exports reached 16.4 MMT from October 2015 to July 2016. FAS Kyiv estimates corn exports to reach 16.9 MMT for MY2015/16.

During October 2015 to July 2016, due to the lack of demand, trade flows have been transferred from the Chinese market (which bought only 2.4 MMT, a 44-percent decrease compared to October 2014 to July 2015) to the EU market (which imported 8.4 MMT, a 44-percent increase).

The potential “soft” factor limiting actual export volumes might be the Memorandum of Understanding (MoU) for MY2016/17 signed between MAPF and a number of NGOs representing the interests of traders, farmers and millers. The MoU suggests the following exportable amounts: Wheat – 16.5 MMT (including 10.1 MMT of milling wheat and 6.4 MMT of feed wheat), Barley – 5.6 MMT, and Rye – 1 thousand MT. For more details about MoU influence on grain market, please refer to our [GAIN Report UP1613](#).

According to industry sources, inland grain logistics to port gate is structured as follows: 63 percent

transported by railcars, 32 percent by trucks, and 5 percent by river.

In summer 2016 the Government of Ukraine introduced a ban on movement of trucks with gross weight exceeding 40 tons (previously 50-60 tons was allowed) on highways to prevent excessive damage of the roads. This limitation has increased transportation costs to port gate.

Railway transportation continues to remain inefficient due to inability of the national railway operator to invest into the renewal of an aging fleet of grain hoppers circulated in country. This also results in additional costs due to downtime and grain loss/theft.

Ukraine is a net exporter of grains and does not import significant volumes of these commodities.

However, should be noted that due to the continued slide in rye production, in MY2015/16 Ukraine imported 15 thousand MT from the EU to cover demand on the local market.

Ukraine also imported 16.3 thousand metric tons of milling industry products (predominantly wheat flour and pasta) for MY2015/16. They are mainly sourced from the EU, but this trend is reversing as consumers are switching to more affordable domestic brands due to the unfavorable economic situation in country.

For October 2015 to July 2016, Ukraine imported 27.8 thousand MT of corn, including 23.6 thousand MT from the EU. These are predominantly planting seeds and this number is assumed as final volume of exports in the PSD table for MY2015/16.

Consumption

Domestic wheat consumption is sliding down due to a decreasing population as well as loss of governmental control over the Crimean Peninsula and parts of the territories in Eastern Ukraine. According to industry contacts, flour mills in Ukraine are running at approximately 30 percent of their capacity, and millers are trying to balance shrinking domestic consumption with exports.

Thus is confirmed by SSSU's data indicating shrinking volumes of wheat flour as well as bakery products in Ukraine (please refer to graphs on wheat and bread production below).

Information about the production of bread and bakery products provides a more objective picture of the decrease in domestic demand.

Based on this trend, FAS Kyiv decreased domestic consumption of wheat for food in PSD tables (please refer to Production, Supply and Demand Data Statistics section for more details) both for MY2015/16 and MY2014/15.

According to the local millers’ association report, the annual demand for rye flour on the domestic market is estimated at 320 thousand MT. This is the basis for keeping rye food consumption on the level of 420 thousand MT for MY2015/16 and MY2016/17.

Total feed consumption for all grains has been decreased for MY2015/16 compared to MY2014/15. This reduction is based on a 6.7 percent decrease of poultry flock and a 3.4 percent decrease of the swine herd for January-September 2016, compared to the same period of 2015 in accordance with SSSU data.

Feed rye consumption has been decreased for MY2015/16 and MY2016/17 compared to MY2014/15 because Ukraine began importing this commodity due to the decrease of domestic production.

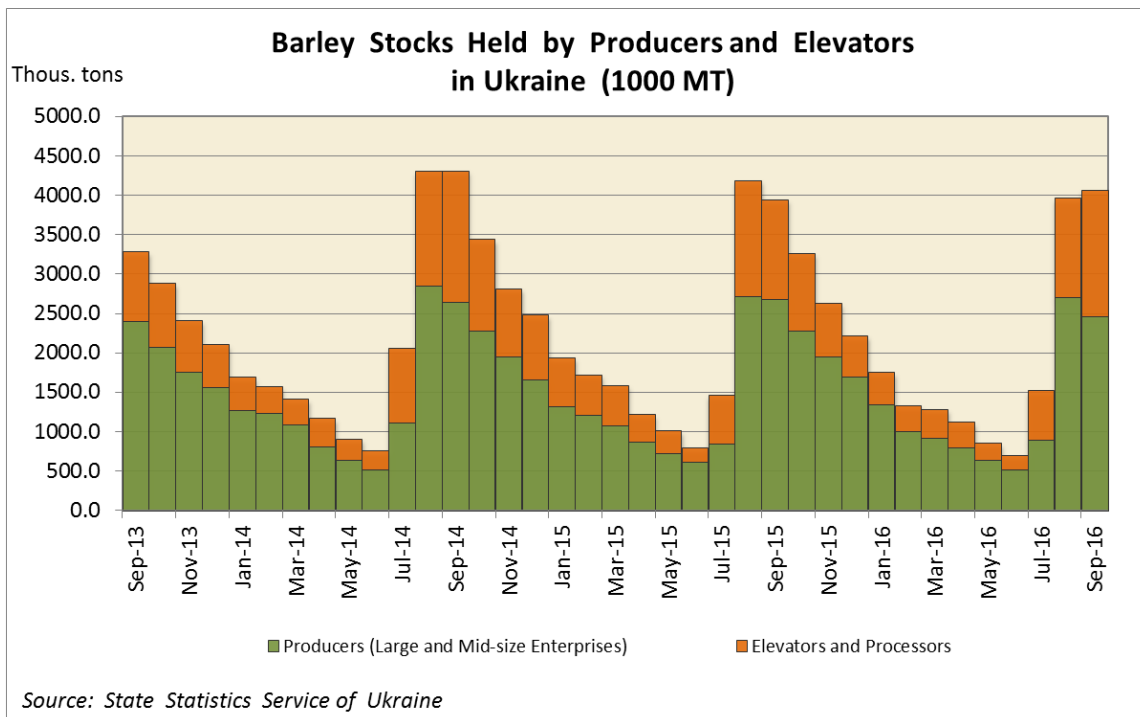

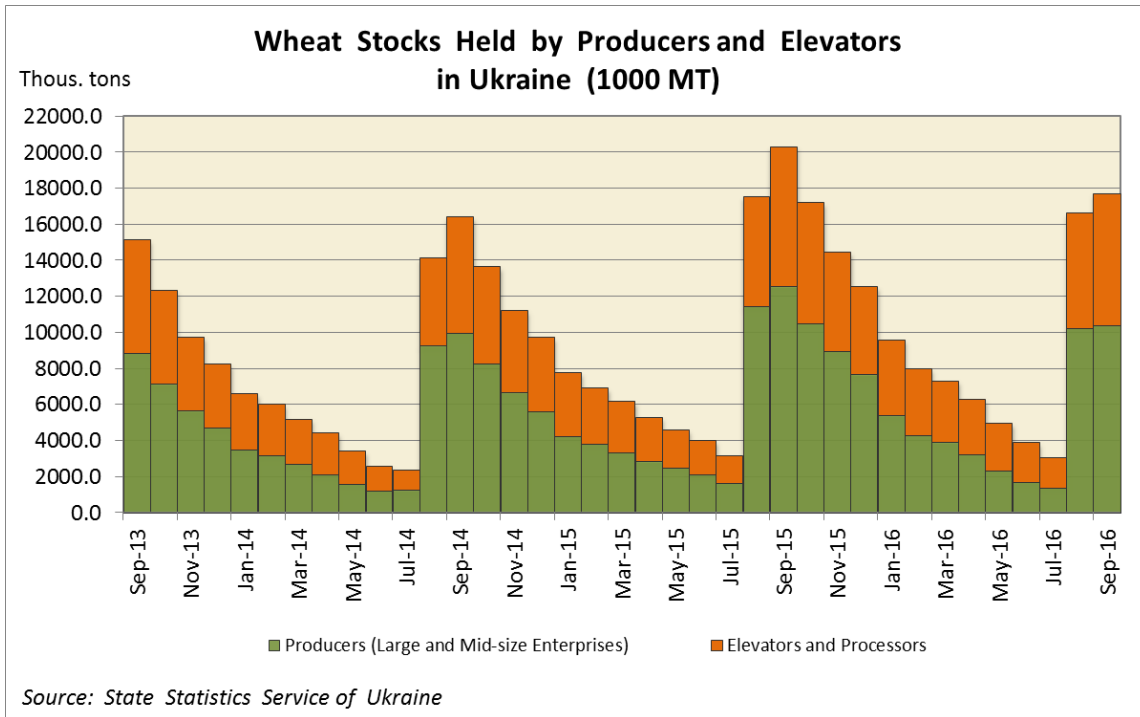

The decrease consumption of rye and corn for feed purposes has been partially substituted by increased domestic consumption of wheat and barley for feed purposes for MY2015/16. Domestic corn prices were higher compared to feed wheat and barley (please refer to the price graph below), so feed rations for animals have likely been rebalanced to include cheaper components.

FAS Kyiv retained the projected MY2016/17 food and total feed consumption for all grains at the same level of the MY2015/16 estimate. It was done based on the 2017 forecast of 2.5 percent growth in Real GDP for Ukraine, presented by the International Monetary Fund (please refer to page 42 of the [Second Review](#) for Ukraine by IMF). At the same time, composition of individual grains in feed rations and their subsequent level of domestic consumption would depend on the level of domestic prices as individual grains are, to some extent, substitutable while balancing feed ratios.

Stocks

Active exports of corn, wheat and barley resulted in a decrease of ending stocks for these crops for MY2015/16, while rye followed the downward trend caused by decreasing production of this crop.

Production, Supply and Demand Data Statistics

Post's FSI Consumption estimates for wheat are lower than USDA's official data by 6.2 percent for MY2014/15, and 11.2 percent both for MY2015/16 and MY2016/17. The rationale behind this reduction is decreased volumes of production for the flour and bakery industry in Ukraine (please refer to Consumption section for more details).

Post's FSI Consumption estimates for rye are higher than USDA's official data by 20 percent for MY2015/16, and 40 percent for MY2016/17. This is based on stable demand for this crop for baking purposes (please refer to Consumption section for more details).

Post's Feed and Residual estimates for wheat, barley and corn have been revised from USDA's official estimates based on the rationale discussed in the Consumption section of this report. Changes from official data are as follows:

- wheat, 15.6 percent higher for both MY2015/16 and MY2016/17;
- corn, 13.4 percent lower for MY2015/16 and 7.8 percent lower for MY2016/17;
- barley, 6.3 percent higher for MY2015/16 and 5.9 percent lower for MY2016/17;
- rye, 40 percent lower for MY2014/15 and 20 percent lower for both MY2015/16 and MY2016/17.

The estimated wheat flour, pasta and bakery exports/imports have been added to export volumes for wheat in wheat grain equivalent calculated by multiplying the product weight by 1.368.

Grain production numbers reported by SSSU in bunker weight have been converted to estimated commodity (final) weight by subtracting 3 percent, and adding Crimean Peninsula's production numbers. Please refer to the Production section of this report for more information.
