Ukraine

Post: Kiev

Sunflower Production Likely to Remain Strong

Report Categories:

Oilseeds and Products

Approved By:

Dwight Wilder, Agricultural Attaché

Prepared By:

Denys Sobolev, Agricultural Specialist

Report Highlights:

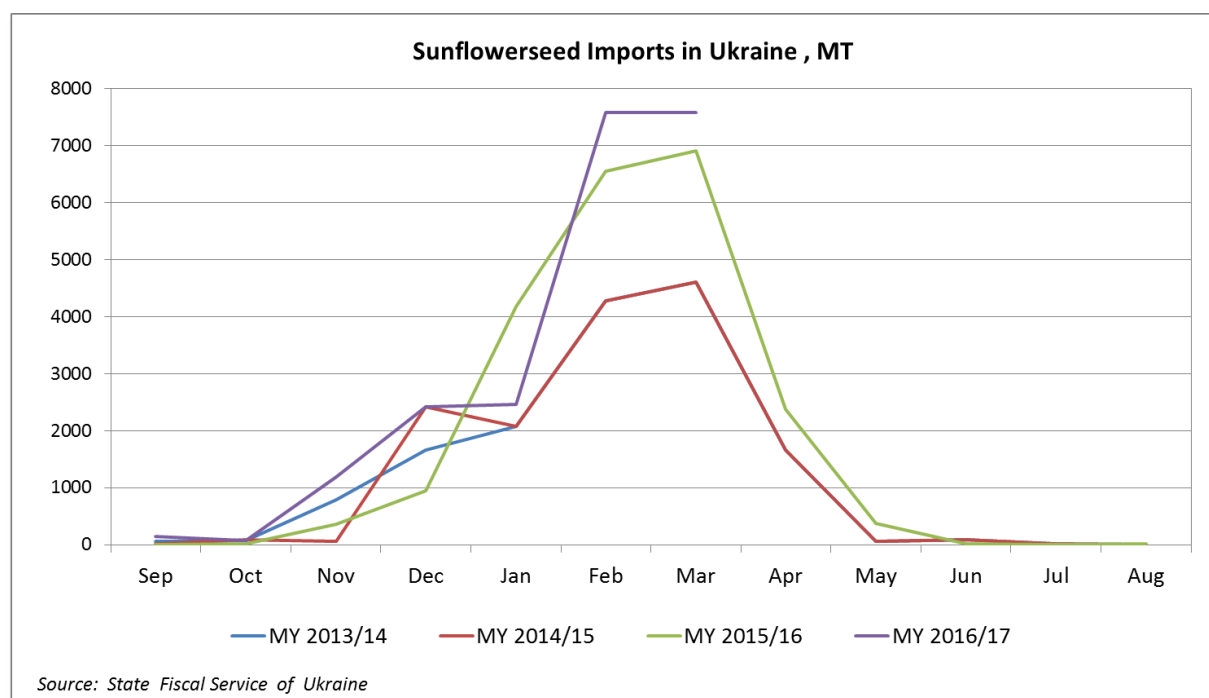

This report incorporates various updates to Production, Supply and Distribution (PSD) data based on recent export numbers as well as domestic planting areas for sunflowers, soybeans, rapeseed and volumes of production for oils and meals.

Production:

For general information about oilseed production and trade in Ukraine please refer to our previous annual [GAIN Report UP1706](#).

According to reports by the Ministry of Agricultural Policy and Food of Ukraine (MAPFU) farmers have already planted over 5.5 million hectares (ha) of sunflower seed and almost 1.9 million ha of soybeans as of June 7, 2017. According to the latest MAPFU report, farmers planted 858 thousand ha of winter rapeseed.

These numbers were used by FAS Kyiv to adjust production volumes of these crops for marketing year (MY) 2017/18.

It should be noted that MAPFU’s reported areas under sunflower in 2017 are lower compared to 2016 despite higher imports of sunflower seeds in 2017 (please see the graph “Sunflowerseed Imports in Ukraine” above). Post witnessed a similar trend in 2016 when planted area numbers were gradually revised upward as the year progressed. Under these circumstances, Post maintains estimated MY2017/18 production volumes for sunflower seed at the level of the previous MY based on seed import data, suggesting similar seed purchases by farmers this year. This number might be adjusted based on subsequent planting reports by the State Statistics Service of Ukraine which will be available later this year.

Below is a map of Ukraine generated by satellite imagery that depicts the vegetative development index (NDVI) as of late March 2017. Overall, the picture looks considerably less favorable compared to the same period in 2016. So far, there is far less green color index throughout the country at this point in the crop cycle. At the same time, there is a higher than normal area displaying white and yellow indices

throughout the central-north and west, which indicates worse than normal vegetative growth in those regions of Ukraine.

**Ukraine: MODIS NDVI Anomaly Departure from Average

**Ukraine: MODIS NDVI Anomaly Departure from Average
May 16-23, 2016**

Source: NASA/GSFC/GIMMS - USDA/FAS/OGA

Suboptimal weather conditions in spring 2017 featuring sub-zero temperatures in May, as well as low levels of topsoil moisture, likely impacted plant development at the initial stage. Based on the abovementioned weather data, Post decreased yield estimates for all oilseeds compared to the two previous years. These numbers could be revised at a later date based on soil moisture levels changes as the crop continues to develop.

Post increased its rapeseed production estimate for MY2016/17 to 1.2 MMT compared to the State Statistical Service of Ukraine's official number -- at 1.154 MMT. This is justified by currently available rapeseed and rapeseed oil export data suggesting higher volume of production in 2016

Consumption:

Reports by domestic poultry producers suggest that they are expanding use of sunflower meal in the diet of their poultry flocks. FAS Kyiv rebalanced feed consumption in favor of increasing sunflower meal while subsequently reducing usage of soybean meal.

Trade:

Estimated oilseed export numbers for MY2016/17 have been revised based on reports of the State Fiscal Service of Ukraine (SFSU) (please refer to Statistical Tables at the end of the report for more details). Ukraine continues to boost export volumes, which was especially visible for sunflower oil and meal as well as soybeans and products of processing thereof. Economic stabilization has resulted in an increase of palm oil imports into Ukraine in 2016 as well.

Export forecasts for all oilseeds for MY2017/18 have been adjusted based on available data for crop production areas in 2017, as reported by MAPFU and Post's own estimates.

It should be noted that for MY2016/17 Ukraine is gradually increasing its volume of sunflower seed exports despite the export tax for this commodity still in place. According to SFSU's data for September 2016 – March 2017 the majority of this volume went to the EU (predominantly France and The Netherlands).

Production, Supply and Distribution Data Statistics:
